A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio

room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio

into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. The | RCMA's monthly Scanner Journal is no longer being | published. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the

northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

> Probably thought they were being video taped for the next "Rodney King" show.
If you were that cop would you want some unknown person
watching you & "stalking" you? If I were that cop I'd be asking you a few
questions too, and I'd feel extremely unsafe everytime I got out of
my patrol car on a traffic stop, not because I think you're going
to video tape me and turn it in to Inside Edition, but because I'd
wonder if you were gonna wait till I get out on a traffic stop to run
me down or shoot at me.
Listening is one thing, but as a SCANNER LOVING AMERICAN, I
think it is people who do things like what you're describing that
cause agencies to feel that they have a need (there is NOT really any
need) to switch their communications to encryption or trunking.
Please, if you want to listen, listen. Have fun with it, but
don't stalk them! If you are that interested in seeing their every
move, let the officer show you what he does in a shift (I guarentee
you from experience that 99% of them would LOVE to have the
opportunity to show you what they REALLY do, not what Rodney King's
lawyer or Dan Rather want you to believe they spend their time doing)
simply call the agency and tell them you'd like to do a ride along.
All but one of the 15+ law enforcement agencies will be happy to take
you with them! The strictest rules they have for their ride along
prgrams here is that they ask that you NOT be a convicted felon!
Try it! But please, let the officer know that he doesn't have to
worry about you killing him, and can focus on the guy with the gun
in the car that he has stopped!
Also, when you do things like this, remember that that officer
informs his Sgt that people are stalking him with scanners. The Sgt
mentions it to the Lt in the next supervisors meeting. The Lt mentions
it to the chief in passing. The chief then goes to the city council
or board of supervisors asking for money... Guess what for! A new
800 Mhz Astro-Digital Trunked Radio System. Now every scanner
enthusiast in your area will know who to thank when their department
goes trunked and they can't even listen from home (despite the fact
that they stayed out of the way and didn't go on SCANNER PATROL or
stalk law enforcement officers).

Dan
KC7ANQ

P.S. No I'm not a cop, I simply have an open mind and am willing to see the law enforcement officers side of this stuff.

From: flam@abdale.demon.co.uk
Message-ID: <31d64991.1204582@news.demon.co.uk>
Source record: 230770

I have a Realistic Pro-2037 which does not have an external aerial connection which is a bit of a problem in my location which is at the bottom of a valley.

After having the back off I can see no reason at all why I cannot add an external connection via a simple BNC chassis socket, indeed the unit has an square whole in the casing albeit infilled.

Can any body see any problems with this or indeed has done something similiar? Being a newcommer to scanning any advise would be gratefully recieved.

I realise that by undertaking such a mod that the warrenty will be invalidated.

Regards,

Flam.

Here's the text from the mod for cellular restoration:

From Popular Communications, October 1990, pages 18, 20-21:

"The PRO-2006 possesses latent capability to tune the frequencies
"wired out" at the factory. To regain continuous coverage from
760 MHz through 1300 MHz, all you have to do is unplug the set from
the powerline, then:

1. Remove the plasic top cover from the radio.
2. Look behind the numeral "3" key, inside the front panel, and you
will see two diodes and blank spots for two more. Locate D-502;
the lower of the two visible diodes.
3. Snip the exposed, upper leg of D-502; push the two cut ends
slightly apart.
4. Button the case back up and be content with the continuous
frequency coverage of 25 MHx-520 MHz and 760 MHz-1300 MHz.

Next, press the STEP key three times while in any SEARCH mode,
you will see, successively on the LCD Display, the step or increment
indications of "5" kHz," "12.5 kHz" and then "50 kHz." Press the
STEP key a dozen times or a hundred, and only the above three
increments will be displayed.

Now , if you have restored the full frequecy capabilites in your
PRO-2004, 2005, or 2006, and first press the RESET key, then just
as soon as a SEARCH enters the frequency ranges of 825-845 MHz
and/or 870-890 MHz, you will see a 4th increment displayed:
"30 kHz"! It's OK! This is appropriate for the spacing in those
bands.
Regards!

Bob

From: rob@panix.com
Message-ID: <4r640v$6np@panix2.panix.com>
Source record: 230775

I have a 7A4 Pro-51, which I've previously modified with the
keypad trick (2-9-LOut). But somewhere it lost it's programming,
and now when I do it, it doesn't set the frequencies anymore.
2-9-Manual (I think) does work with the second set of test frequencies.
I'm fairly sure that the (2-9-Lout) was the sequence that I used to enable
it last year, but vaguely remember that there was an alternate one.
So, is there anything else I should try, or any reason why the
test mode no longer would work?

THanks

-ROb

Can anyone help me with a small bc3000 problem?

Im just wondering how the automatic battery save works?

It is turned on (done function that shows 'on save', so is this all that I have to do? The manual says save will work when in manual mode, delay off, no signal for 60secs so does this mean that if Im in manual mode on a channel the batt save will work if no signal for 60 secs? Does it matter if screen says 'DLY' or not whilst in manual mode?

How much will batt save affect how long battery lasts?

Cheers Matthew

Hi Wade,
>> Does anyone have any details of how to control an Icom R7000 scanner
from
an IBM PC compatible computer?

Thanks,

Wade, G1OIR <<

I have a shareware programme, if anybody wants a copy, email me with
your postal address, and i will happily send you a copy.

I think it is to big to attach to usenet....I have not tried it, but the
readme file seems quite interesting..

Does anyone have any suggestions on replacing the internal NiCad in an Icom R1? Mine is shot, and I hate the thought of having to send it back for service. (Please no flames about the R1, all it's problems are well known to me, but it serves my purposes quite well as a supplement to my other FIVE scanners!)
Also, I have the supplementary battery pack that takes AA batteries, but I like to use the unit without it when I need to take advantage of its small size.

The NiCad pack in the R1 is made up of 1/3 size AA cells. This is a fairly "standard" battery pack found in several other ICOM "S" series handheld tranceivers. I was able to find a replacement at one of the larger hamfests in the Baltimore area, from a vendor called "Mr. NiCad." I've seen adds in the back of -QST- for this company (E.H. Yost & Co.) and others firms that sell mail-order replacement "inserts" for rebuilding battery packs. As I recall, the one I purchased was less then $25.00.

The R1 is a very tight package and much care is required in disassembling and reassembling it; but it can be done with just a set of jewellers' screwdrivers. The battery pack simply fits into the lower part of the radio and is mated to the electronics by a small connector, so no soldering is required. This connector is "keyed" so that it will only mate one way, unless you force it. Also, be sure to observe, carefully, how you disassembled the two halves of the case so that you can return all of the internal wires and ribbon cables to the same position when you reassemble the unit. Remember, it should require very little force to put the two halves back together again.

Many people complain about the R1, but mine is still one of my favorite radios. Its small size and the variety of accessories that can be used with it (that also match my IC24AT dualbander) make it the radio I take most often on trips and outings. I own 6 different ICOM handheld radios and they are all tough, reliable units.

Actually, I think he is refering to the new Pro 26 that goes to 1.6 gig. I don't know if RS has ever re-used an old model number for such a different product but they have now. I'm not sure if Uniden makes the new 26.

BTW: The Pro 26 is available in the UK with no cell block. There are a few places that sells replacement CPU's for the new 26 that allows for full coverage with no cell block. If unsoldering a CPU bothers you then you can buy a replacement board with the CPU already installed.

BCT-7 is probably the best mobile scanner on the market for someone who travels from state to state a lot. I have the local frequencies programmed into the PRIVATE section, and use the state to state feature when I travel. The alert function only works when troopers use their handhelds to key their mobile radios (mobile extenders). In places like SC, the troopers are on 800 mhz, and therefore the alerts are useless. Otherwise, the unit is a gem. It has a lockout for data transmissions, etc, etc.
For antennas, multiple options. I use the secondary antenna that used to be used with my factory radio for "multipath". You can also get splitters to use your car radio antenna with the unit. Those are available from Grove Enterprises. I believe that unit came with an antenna with coax and suction cups for the windshield. Not a "stealth" installation. I would recommend the converter or a dedicated scanner antenna.

While driving through the Bay Area, I listen to Metro Traffic on
450.0625. they serve all the local broadcasters around here. You only
get pertinent traffic info and they do all the monitoring for you.
They're pretty on top of it.

If you want a great reference for local government radio frequencies
in this area get yourself a copy of "Government Radio Systems" by Bob
Kelty. He is the frequency god and writes the book for the agencies
themselves to use as reference.

BCT-7 is really a nice little unit. I travel a lot so it saves me a lot of research and programming time. Especially useful is the bank search function. Caught in a traffic jam on the interstate, I just scanned the CB channels and the trucker traffic had the problem pegged before the HP knew about it. So I took the nearest exit and saved myself 45 minutes.
I'd recmmend this unit anytime.

>vertical rather then horizontal. Frequencies of interest: between 30
>and 50 mhz

If you're looking for a quick and inexpensive method, try this: Use a regular 2x4 stud as your boom. Calculate the positions of the elements and use a long 5/8 drill bit to drill holes through the narrow part of the board. (This may take a bit of practice if you don't have a drill press) Next, buy some 1/4 inch tubing at your local hardware store. Aluminum is better because it's lighter, but copper is usually half the price. Cut the elements to the correct length and slide them through the holes in the board. Drill a small hole in boom at the middle of each element, and put a screw through it to keep the element from sliding out. As far as matching goes, a gamma match would probably be the best, but I have no idea how to calculate the length. If using copper tubing, you can easily make your driven element into a folded dipole, and then use a standard TV matching transformer and run regular RG59U cable. This has the added advantage of being able to use an antenna amplifier which has one part inside the matching transformer and the other part at the other end of the coax cable. For calculating the element lengths and spacings, start off with approximate values and then use software like YagiMax to optimize them.

I recently built a 2-element yagi using this method and it works a lot better than the discone for receiving signals in the 45-49 MHz range. As for mounting it vertically, that shouldn't be a problem as long as the elements aren't too long. For 46 MHz the element length is about 3.2 metres, or 1.6 metres per side. However for 30 MHz the elements will be about 5 metres, so you may need to use thinner and/or lighter aluminum tubing, perhaps in several sections so the element is tapered. Also, it is unlikely that you will be able to get a standard Yagi that covers all the way from 30 to 50 MHz with adequate gain. You may need to use several antennas for different sections of the band, or use a different wide-band design, such as a log-periodic dipole array or even some of the designs used by those all-channel TV antennas.

> me with this? Thanks in advance; Dick

There is no light. It is an electroluminesent (however you spell it)
display. The long flat thing behind the LCD pannel emits light. I have a
PRO 2006 and when my light stopped working I thought was the backlight
also. It turned out to be the transformer on the display board. As far
as i know you can still get the part from Radio Shack.(the transformer
or the back light)

Hello to all,
I'm looking for a Kinematix Imp2 FM wireless mike. This gizmo was made around 1970. It's a very small (small enough to fit in a cigarette pack) FM transmitter that covers 88-108MHz. It runs on a "AA" cell or a 9 volt battery (round type). Anybody having one of these buried in a draw or closet and wants to part with it please e-mail me direct.
Thanks, Mark

Jeff-

I am really interested in connecting to these groups but so far have not been able to locate them. I'm using
Netscape Chat, and it requires a SERVER NAME and a PORT NUMBER. Would you happen to know how to access the
rooms you're discussing?

Thanks!

Ken

>Thanks!

Scanner Master Florida Communications Guide lists the Florida ARTCC's in detail. If you collect old copies of Popular Communications, it's been several years, but they had a very detailed listing. I hear planes handing over to 133.500 (Miami's Orlando freq.) fairly often here in Jax.

Airtran I can't locate. Maybe it has a parent company with a different name?

I'm not sure, I thought it also included digital data. BUT I COULD BE
WRONG.

BTW you will not get far trying to decode RTTY, FAX, and ACARS.

It just don't work that way!!!

But you should be smart enough :') to be able to figure it out for
yourself.

Hi everybody,
Wanted to buy a portable scanner with budget of around $300. After reading several articles in this group, the target is narrow down to the following: PRO-26, PRO-62, PRO-2026, BC230XLT, BC3000XLT.
I would also like to have earphone output, AC power adaptor input(for long term usage).
I know only a little about scanner. Is there a big difference between scanning of 25 channels/sec. or 100 channels/sec.? How about the search?
Should I just buy from Radio Shack or through mail order?
Any advice, information is welcome. Thank a lot.

I can also be reach by kc151@columbia.edu

I think you're on the money with both of the scanner models listed. I've heard that the Yupiteru models provide better RF performance, but I have no experience with their scanners. I have the AOR 8K, and if properly

equipped (eg. an outdoor antenna, preamp/tuner and possibly a filter), you should do rather well--at least I have. With the parameters you've defined, I think you may want to invest in a decent comm's receiver/table-top SW. Some are small enough to be portable (Lowe HF 150), and can be upgraded to receive the marine bands. Check any SW/scanner catalogues you may have around the house. Good luck. Later,

Jeff

Hi all!

Can anyone point me towards an aviation scanning web page as
mentioned below?

I will put a brief list of these callsigns on my page:

http://netspace.net.au/~hellfire/call.html

It will probably be there in a day or two. I've got a huge list
of callsigns for the major worldwide airlines, but most of them
are pretty boring, like QANTAS AIRWAYS uses 'QANTAS', US AIR
uses...'US AIR'.

Hi, if you are listening to a channel, you just have it on manual and push the button to get rid of the delay indicator. it then goes into battery save mode after 60 or so seconds. To confirm the battery save function, after a minute or so with no signal, put the speaker up to your ear, you will hear a very faint "click" it is the battery cycling down. The battery save only works on one manual channel that you want to listen to. Hope that helps. Greg.......btw there are a heap of little tricks the 3000 does when you hold down certain buttons when you first turn it on. They are on a web page somewhere and also in the June??? edition of Radio and Communications magazine.... Cheers.

There is an ar2700 web site witha lot of good info. It is located at

www.mv.com/users/wje/aor.html

I've been looking strongly at the 2700 for a while because of the
computer control. If the BC3000 had that then the choice would be easy.
If you are not into computer control then the 3000 is probably the better
radio.

Star Trak 400 IRD $159.99 each
without VCII module
Features:
ï¿½ Integrated Receiver/Descrambler
ï¿½ C Band and Ku Band compatible
ï¿½ Digital stereo sound on VC programming
ï¿½ 50 Satellite memory
ï¿½ 96 Channel memory
ï¿½ Programmable channel settings
ï¿½ Allows new satellites to be added easily
ï¿½ On-screen displays that make operation easy
ï¿½ Parental lock-out on VC programming
ï¿½ Power-out memory
ï¿½ Voltage switching LNBF compatible
ï¿½ Quartz PLL locked video and audio frequencies
ï¿½ Built-In Tracker
ï¿½ UL Recognized
ï¿½ CSA Certified
ï¿½ Manufacturers warranty

Remote Extender $59.95 each
ï¿½ Converts Infra-Red remote to UHF remote
ï¿½ no limit to the number of TVs to be controlled
ï¿½ works with all IR remotes
ï¿½ no need to buy an extra satellite receiver
ï¿½ no wiring required, just plug it in!

Replacement LNBFs $59.95 each
for RCA and DISH DSS systems
ï¿½ better lightning protection
ï¿½ better warranty (18 months)
ï¿½ direct replacement

Voltage Inverters $69.95 each
ï¿½ converts 12 VDC to 110 VAC
ï¿½ up to 300 watts (140 watts constant)

Multiplex Switch $79.95 each
ï¿½ allows up to 4 receivers on 1 dish
ï¿½ works on DSS, Ku, and C-band
ï¿½ allows for off-air antenna

20 dB Line Amp $12.95 each
ï¿½ goes in the coax line
ï¿½ powered from your receiver
ï¿½ adds 20 dB

Servo Motor $12.95 each
ï¿½ replaces Chaparral

SF-95 Signal Meter $39.95 each
ï¿½ works on DSS, Ku, C-band etc.
ï¿½ visual meter
ï¿½ audio tone
ï¿½ back lighted

Gold series C/Ku LNBF $59.95 each
ï¿½ C and Ku band combined
ï¿½ electronic switching (no moving parts)
ï¿½ Silver series only $49.95 each

15 degree LNBF $49.95 each
ï¿½ C-band
ï¿½ electronic switching (no moving parts)

25 degree LNB $29.95 each
ï¿½ C-band upgrade
ï¿½ 35 degree only $19.95 each

0.7 dB Ku LNB $39.95 each
ï¿½ Ku band LNB

Reed Sensors for Super Jack
Plug-in type $5.50 each
Pigtail type $7.50 each

Self-Install Kits $39.95 each
ï¿½ install it yourself
ï¿½ most effective kit on the market

Yep, pretty easy but just be careful when you take the back cover off that
you don't loose the small spring that lives with the small bottom plate
retention clip. If you are not aware its there its easy to loose...goes
flying off onto the floor......

>specs. Only difference is the name on the case.

The Radio Shack PRO-26 is manufactured by Uniden. But it is
a very different radio than the Uniden BC3000XLT in features,
frequency coverage, circuitry, and performance.

From my "Buying a Used Scanner FAQ:"

[...]

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel
portable with 20 banks. Up conversion. Very fast scan,
search, and intelligent Auto Store. Mode, attenuator, and
delay settings programmable for each channel. 50
frequencies can be locked out during search. Larger speaker
than PRO-26 produces better, crisper audio. See "The Uniden
Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring
Times, April 1995 and "The Radio Shack PRO-26 vs.
Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in
Monitoring Times, August 1995.

[...]

PRO-26: 1985 vintage. Very good portable made by for Radio
Shack by Uniden. 200 channels, very fast scan/search. Good
display. Covers all TV channels, but spectrum adjacent to
cellular phone band is censored which prevents monitoring
parts of some trunked systems (e.g., IL State Police
district 4). Up to 50 frequencies can be skipped during
search. Limited image rejection causes 929 MHz paging
interference in 170 MHz range. IFs are 380.7/254.4, 58.075,
and 5.5/0.455 MHz. Audio suffers from small speaker. See
"The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by
Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Be careful about the various Express callsigns. The Southern
California United Express uses "Mesa", because it's Mesa Airlines,
operating as United Express. They also carry the Mesa magazine, even
though the 1900s are painted in the United Express livery.

I assume that your United Express is a different company, doing the
same thing.

As the "Up-until-OH-so-recently" Kansas Associate Editor for the RCMA Scanner Journal, I would like to think that posting this article is like performing CPR on the publication. As we all know, CPR's main purpose is to keep oxygenated blood flowing to the brain until professional medical folks can come and take over and solve the real problem, whatever that may be. I realize that this posting isn't the answer to RCMA's problems, but maybe it is "keeping it barely alive" in some small way.

So, I hope you enjoy the article that would have been in the July issue. Any comments or questions are appreciated...good or bad. Unless I get my hands slapped by someone, I plan on posting an "RCMKS" column each month. Please send information on the state of Kansas to me, and I will attempt to get it spread around so we can all benefit from it.

Andy KS-014

++

July 1996

A few columns ago we discussed the Johnson County Police Academyï¿½s use of the Intercity radio system for situational training. Johnson Countyï¿½s Intercity system is multi-cast on 453.450 and 460.100. About the time my letter to Mike Redman containing that column irretrievably hit the bottom of the mail box, I discovered a new plan for the Academyï¿½s radio needs. A year or so ago, Overland Park PD abandon their UHF frequencies (460.225, 460.375 and 460.500) for an Ericsson 800 MHz trunked system. Two of them will be used by the Academy...460.375 and 460.500. Iï¿½ve already heard them on 460.375. The transmissions are simplex, so you may not hear any activity unless they are close. They often commandeer parts of Shawnee Mission Park or Heritage Park in which to play cops and robbers. I mean no disrespect when I say "play cops and robbers." It is serious business. I have dispatched for the Academy before, and even though the recruits that Iï¿½ve seen get "killed" go home to their family that night, it is an eye opening experience for those new to the business. Incidentally, 460.225 is still unclaimed. Iï¿½m going to leave it in my scanner. As far as I know it is unused, but it could become active without any notice. You just never know!
Speaking of Overland Parkï¿½s Ericsson system (856/857/858/859/860.9875), I have heard that a problem has reared its ugly head. When additional city agencies were put on it, cars started getting busy signals when trying to transmit...meaning that they had to "stand in line" to talk. Whether it is a loading problem, or trouble with the prioritization given to different fleets is unknown. I scan them regularly, and it sounds like the thing works fine. Many 5 frequency trunked systems handle more units than OP has on theirs, so weï¿½ll just

wait and see. In the meantime, Iï¿½ll just keep my eye out for an OP Officer bearing a maniacal expression who is transforming his portable into tiny fragments with his night stick. That will confirm the rumors.
Bob KS-001 was cruising home and monitored KHP Topeka on 868.8625, which is licensed in Lawrence WPHB587. Only the dispatcher was heard, no mobiles. He suspected that the mobiles were on the existing low band frequency of 44.820. The signal strength in the Tonganoxie area was low, making him believe that the transmitter is not in Lawrence...perhaps west of there...or maybe they were testing it at a low power. A few days later Bob noted that the mobiles were fully repeated, though the signal strength remained the same. He listened to troopers remark about how nice it was to have car to car capabilities over long distances. They also mentioned that some console equipment was yet to be installed.
One recent evening Bob heard a unit call a KHP mobile, but it received no reply. The KHP dispatcher keyed up and asked the unit to ID itself. It was a Douglas County deputy in Eudora "testing a new handheld" he was just issued. In his last e-mail to me, he heard the Douglas County Sheriffï¿½s dispatcher test her transmitter with KHP on 868.8625. Bob said that all this information means:
A. The system has good coverage if the site is west of Lawrence...or
B. Douglas County mobiles will have the ability to call KHP direct on 800...or
C. Douglas County dispatch will have the ability to call KHP direct on 800...or
D. Douglas County may be going 800 themselves, soon...or
E. All of the above.
I suggest that you donï¿½t wipe KHPï¿½s low band frequencies from your scanner. They still have operational equipment. Who they might communicate with is unknown, but when they do, I want to know about it. Thatï¿½s what a big part of this hobby is aboutï¿½the thrill of the hunt.
I checked the 1996 Police Call and found a newly issued NPSPAC frequency to Douglas County...866.7625 WPFT496. It has the same number of mobile licenses as the non-NPSPAC freq (852.6625 WNUT774) Douglas County has had for a while for detective use. Lawrence has a new non-NPSPAC freq of 856.7125 WPHY874. No idea what either is being used for yet.
Here in Johnson County, KHP is multi-casting dispatch on low band and the Countyï¿½s 800 system (856/857/858/859/860.9625.) Some mobiles are heard on low band, some on 800. Obviously, as troopers get new cars, they are equipped with 800 radios. During the day it is a pain to monitor them on the trunked system because of the public transit, airport, and assorted agencies clogging it up. In the evening and on mids it is great. I suppose that the low band system will die a slow, but inevitable death in the near future.
This monthï¿½s batch of NPSPAC frequencies:

Hamilton CO 866.3500
Hamilton CO 866.6250

Message-ID: <you-0107961905440001@204.249.225.244>
Source record: 230628

Hello, I just have a few questions about the difference between 46MHZ cordless phones compared to 900MHZ phones. My understanding is that 900MHZ radio waves will "bounce" off walls better than 46MHZ waves will.Why is this?Also why do 900MHZ waves travel though buildings that have a lot of metal and concretet.Also will 900MHZ waves penetrate things like steel and concrete or will they bounce off them.Thanks for any info.

1994. Dressler ARA 2000 active antenna? Austin Ferret? or Just Plain Diamond Discone?

Source record: 230636

I have a Pro 2021 that I just bought and I did the scan speed mod on,which I wasn't to impressed with (should of added 11 more chanells per sec. to the scan mode) not really that noticable. Anyway now the problem is that the monitor feature won't work. I don't know if it's because I don't know how to set this up or if the mod. changed something with the scanner. I just bought it from a pawn shop and it worked fine before the mod. I don't have a manaul so I'm not really to sure that it's the scanner and just my not knowing how to set this up. Before I turned it on after the mod. I a;so hit the reset button so that may have flushed the memory for this.

Here's what happends when I try to set this feature: I push the monitor button the the program button , whatever number button I push (#1) it goes to that bank. It does not enter on the limit up or down. I'm almost sure it's me and not the scanner, but if someone knows this scanner please inlighten me on how to program it.
P.S. someone told me there is also a mod to increase my memory chanells in excess of the alreadt 200 chs. it alreadt has if this is true and you know that mod please send it to me thanks.

Sorry, I made a typo in the FAQ. I meant 1995 vintage.

> He was talking about the new PRO-26 with 25MHz to 1.3GHz coverage,

Did Radio Shack change the PRO-26 offered in 1995?
I know of only two Radio Shack scanners bearing the PRO-26 label:

(1) the minimalist crystal controlled portable
from the early 1980s, made by GRE.

(2) current model programmable portable introduced
in 1995 and made by Uniden.

I reviewed (2) in August 1995 Monitoring Times and contrasted
it to the BC3000XLT. They are very different from each other.

Actually, I think you have it backwards...

The higher the frequency, the greater the PENETRATION... this means
that 900Mhz waves are FAR more capable of busting through the walls
(wood, metal, concrete or otherwise) than the 46Mhz waves.

This is the main reason 900Mhz phones are -so- much better.

I might be mistaken (somebody correct me if I'm wrong), but that is my
understanding of it.

I'm a little surprised that they went totally over to the 800
system. I've heard that there are so many bugs in the system and the
reception is so poor, firefighters feel their lives are in danger
whenever they have to rely on communications inside buildings. They
said you have to stand in the middle of the street to use the radio.
According to the KC Star, the city is looking into legal action
against the contractors. Then they promoted the guy to Major who
implemented the system. That definitely sounds like KCPD. Not to
mention us poor scanners that no longer get to listen to police calls
without the pains associated with trunk monitoring. Are their any
radio scanners out their that make trunk monitoring any easier? I'm
using a PRO-51 (Pre-cell) right now.

Hi Joe,

A local police dept here is planning to go to edacs digital. The Metro Toronto ambulance is using an ericsson system (not sure if its technically edacs or not). That system is analogue and is "moniterable" however, at the end of each transmission after the repeater hang time, there is a burst of tones (called the "Ge jingle" since it sounds like the "we bring good things to life jingle used in GE commercials) which locks up your scanner for 2-3 secconds (while the conversation is continuing on another frequency!). However, with the edacs digital, the audio is all digitized and cannot be monitored with a conventional scanner.

It winds them up something rotten if you relay for them and call them
"Speedboat". Silly, but fun!

Interesting how some 'lost' company names keep going - Polar use
"Polar Tiger" for some of their flights, presumably using Flying Tiger
routes or 'frames leased from Northwest (who bought FT aircraft).

2027. Info. on Optoelectronics Frequency Recorder for AR8000 needed

Newsgroup: rec.radio.scanner
Date: 1996-07-02 00:00:00 UTC
From: 100561.132@compuserve.com
Message-ID: <31d941b8.131270@news.compuserve.com>
Source record: 230662
Cross-posted to: rec.radio.scanner,alt.radio.scanner.uk

I'm looking to obtain a frequency recorder for my AR8000.

The Optoelectronics Scout seems a good choice because of the Reaction Tune function for the AR8000.
The Scout Model 40 has a range 10MHz - 1.4GHz.
However, I've heard that there is a Model 25 with a range of 10MHz - 2.8GHz.
I can't seem to find any details on the Scout Model 25 - is it a discontinued model?, how does it differ from the Model 40?, and where is it sold?

Visiting Optoelectronics web site I've read about a new product called The Xplorer (http://www.optoelectronics.com/xplorer.htm).
This appears to combine functionality from the Scout, R10 Interceptor, and DC440 Decoder 8-)
Unfortunately, there is no mention of Reaction Tune 8-(although a CI-V interface is specified.
Is anyone using this product yet?, would this be a worthwhile purchase?, does it support Reaction Tune?

On a related note does anyone know how Optoelectronics' OPTOLINX interface compares with AOR's CU8232 interface?
Considering the additional functionality of the OPTOLINX is it a better buy?
Also, are the various programs such as PC-Manager, Scancat, ScanStar, etc., compatible with the OPTOLINX interface?

Thanks, Trevor.

2033. two-dogs cell call follower

Newsgroup: rec.radio.scanner
Date: 1996-07-02 00:00:00 UTC
From: Doctor Who <drwho@sinister.com>
Message-ID: <31D97E6A.4B93B513@sinister.com>
Source record: 230668

A while ago, two-dogs mentioned he is developing a device to automatically follow cellular calls as they hop from channel to channel. He was met with much skepticism. I don't doubt him, because he has already written programs that decode cellular data, a program called SnarfWare which is available from my web page (http://www.l0pht.com/radiophone). Also on my web page is an explanation of how to monitor and follow calls with a regular motorola cellular phone. There is no reason this method couldn't be adapted to a hardware device that would interface with a scanner to do the same thing. All it would take is decoding the cellular data stream with a modem chip (already available for use in cellular phones), a small microcontroller programmed to interpret this data and work with some interface hardware to tell the scanner what to do.

I believe you may need a WBFM scanner to use this, and of course have a scanner that can be controlled by computer.

TWO DOGS: Send me an "ad" or technical description or whatever you have of this project, and I'll put it up on my web page, or send a URL for yours (since you don't have an email address for the public to use, I will address you in the open like this).

Jim:

Look on the back of the scanner for the FCC I.D. number. If it has an
"A" at the end of the number, it can NOT be modified for Cellular
reception.

2044. AR 1000 XLT Sensitivity

Newsgroup: rec.radio.scanner
Date: 1996-07-02 00:00:00 UTC
From: "K.Bailey" <kbailey@riverstyx.com>
Message-ID: <31D9B1E4.2666@riverstyx.com>
Source record: 230679

I have a 1000 XLT, with which I am very pleased, except for the sensitivity on the medium wave AM broadcast band. I realise the antenna is is way off for that frequency etc.,but the sensitivty is REALLY bad.Trans-atlantic shortwave broadcasters and low-power VHF handhelds come in much better than clear-channel 50,000 watt KRLD does ...and KRLD is only about 5 miles from here.
Is this the nature of the radio, or is something wrong with it?
Thanks,
Kdb

Depends on the level of noise you are willing to tolerate in your scanners. All of the preamp[s mentionsed by the other respondents induce mega noise into the recieved signal. the sole exception would be to purchase a l;ow noise gASFET preamp such as those included with high quality transmitting amplifiers.

2067. Grove & AR5000 vs. R-8500

Newsgroup: rec.radio.scanner
Date: 1996-07-03 00:00:00 UTC
From: Brett Miller - N7OLQ <brett_miller@ccm.hf.intel.com>
Message-ID: <31DAE783.5D04@ccm.hf.intel.com>
Source record: 230504

Maybe it is just me, but the latest Grove catalog made me feel like Grove was doing something strange.
In their catalog, the AOR AR5000 (10 Hz - 2.6 GHz) is listed in the shortwave section, while the Icom R-8500 (100 Hz - 1.9 GHz) is listed in the scanner section.

AOR may not design the most user friendly scanners, but they have almost always done better than Icom. The 8500 only scans at 10-20 cps, while the 5000 scans at 50 cps.

Also, all the data I've been able to gather seems to indocate that the 5000 is superior in most every way to the Icom, yet it costs less.

I guess I'm just trying to figure out why Grove is trying to avoid putting them side by side.

> this?Also why do 900MHZ waves travel though buildings that have a lot of
> metal and concretet.Also will 900MHZ waves penetrate things like steel and
> concrete or will they bounce off them.Thanks for any info.
>

You are correct...900 MHz signals bounce off of walls and other objects
much better than signals at 46 MHz.

46 MHz will penetrate but usually be absorbed by concrete. 900 MHz will
indeed bounce off concrete, both would be reflected off of steel but
again, some of the 46 MHz signal would become attenuated by absorption
of the steel where 900 MHz would mostly bounce (be reflected).

A 900 MHz signal will travel thru buildings not by penetrating the structure
but rather by bouncing around so much that it finds its way around and
thru aperatures such as window and door openings. Firefighters and other
public services are moving up to 800/900 MHz for this reason.

Without getting into physics, it has to do with the wavelength of the
signals. The wavelength of 46 MHz is roughly 7 meters where 900 MHz
is about 33 centimeters in length. (Frequency is a function of
wavelength).
Generally speaking, the longer the wavelength (lower the frequency),
the more penetrable the signal. What might also work for radio users
like Firefighters would be to use radio equipment in the Very Low
Frequency range (VLF) as the signals there would penetrate concrete,
wood and other structures however, the power required and length of an
antenna on a handheld unit would be unfeasible...it makes more sense to
go the other way and let the signals bounce around and find their way out
of a buidling using UHF.

Just for interest sake, submarines in WW2 used to use Very Low Frequency
when they were submerged (not too deep) as the long wavelength could
penetrate thru the water to communicate. (They towed balloons that suspended
their antennas when surfaced.)

Now to throw a wrench into the above statements..the opposite occurs
when "skip" conditions arise...
Frequencies below (typically) 50 or 60 MHz are susceptible to being
reflected off the various layers of the Ionosphere as they are radiated
toward the horizon. (The density of the Ionosphere is affected by many
things such as time of day, sunspot activity ect..)
The bounced signal comes back to earth at some location hundreds or

thousands of miles away. Communication can take place at both ends.
As you go up in frequency, the signals refract or penetrate the
Ionosphere. Thats why Microwave is a good band for satellite
communication...it is less vulnerable to Ionospheric density (although
dense weather can play a factor ...yet another story).
All of this is explained by the density of the ion particals in the
various layers of our atmosphere....the lower freqs (longer wavelength)
get reflected off the dense clouds of ion particles but the higher
frequencies (shorter wavelength) sift past the ions to penetrate off
into space. The dense ion clouds act like a wire mesh reflector...the
bigger waves bounce, the smaller ones get thru.

Bet you didn't anticipate a long winded explanation like this. did you:)
Funny what a beer and a few minutes of spare time after putting the kid
to sleep can do to you !

Cheers...
Hugh Duff VA3TO Toronto

>Only time will tell.

RCMA is a non-profit club with a volunteer staff so why would it have to "make" money if it should go online when going online would eliminate its biggest expenses (printing and mailing)?

When SPEEDX folded a couple years ago a small group of HF utility fans decided to form an electronic (online) utility club. Its name is WUN (Worldwide Utlity News Club). WUN's first issue was January 1995. As of the June 96 issue WUN has a membership of 1074 members in 29 countries. It publishes an online newsletter of from 7 to 10 parts every month. There are no dues.

WUN makes a hardcopy edition of the newsletter available to those who aren't online. The cost is $1.50 per issue to cover printing and mailing. Of the 1074 WUN members, 40 are currently subscribed to the mailed edition.

You can get an idea of the WUN newsletter at WUN's home page at http://www.leonardo.net/berri/wun. There you will find past issues of the newsletter, info files of interest to utility dxers and links to related sites.

Shoot, I thought this was going to be another bash Rat Shack thread (just joking)! When I was deciding on a freq counter, I compared the RS model to the Opto 3300. I went with the Opto because it had a hold button, which I think is quite useful (necessary even).

Hi James,

May be I can put you in the picture.

A discone is a frequency independent antenna.
ie the change in impedance is constant over a very wide band.

It is a derivative of a biconical antenna.
They are widely used by the Defence depts. For
Monitoring large chunks of spectrum.

There are problems associated with the use of discones with
scanning rec

1) They are very broad band and being so make the scanner
sensitive to intermodulation blocking caused by mixing in
the front end due to signal overload.

They should never be used with transmitters.

Narrow band dedicated antennas are less likely to be
affected by intermodulation.

Hope this helps

Bye

That is the nature of the radio. Connect a long wire antenna and you'll
get decent medium wave reception.

Just a note-
Most discones, as those produced by Radio Shack, Icom and Diamond, are

meant to be resonant on the ham bands above 50 Mhz, and can be used with transmitters. An exception would be a receive preamp at the antenna, which should not be used with a transmitter.

<... blah, blah ...>

The Motorola system in Fayetteville, Ark (5 pairs, control rotates near midnite, never uses the lowest pair, all city agencies) is clearly configured so that the next channel assigned after a repeater times out is lower in frequency than the previous one. I've experienced the same thing on other systems.

Obviously, during the day, it's hard to notice (what with all the dog catchers and garbagemen on the system), but at nite, when it's just the PD, it's quite evident.

Ordering the frequencies "in reverse" makes it much easier to follow PD and FD.

Sorry, I don't know what page you'll find that on.

TA> I know only a little about scanner. Is there a big difference between
TA>scanning of 25 channels/sec. or 100 channels/sec.? How about the search?
TA>Should I just buy from Radio Shack or through mail order?
TA> Any advice, information is welcome. Thank a lot.

TA> I can also be reach by kc151@columbia.edu

TA>Eric

Get the Grove catalog even if you don't buy from Grove. It has a good
selector guide in it. Generally, tripple conversion scanners are better.
Double conversion scanners may receive cell phone freqs by scanning
the images. Scanners ordered overseas (such as from Javiation) will not
be cell phone blocked. Grove's # 800-438-8155.

One warning. Scanning can be addictive.

Here are some freqs for Rutgers:
131.95000
156.45000
156.57500
156.72500
156.80000

NI>Diamond?

NI>Thanks
NI> The Night Captain

It's been my experience that plain old wips work the best. The loading
generally favors some band over another band. The trouble with wips is
they have little flexibility, i.e. they may damage the scanner. Smiley
makes a spring loaded wip that may not have this problem.

Generally anything designed for transmitting isn't very good outside the
bands it was design to transmit on.

In a previous article, eflorack@servtech.com () says:

>
>Who has a list of rail channels, their ARR channel numbers, and the
>railroads that use them, and info such as that?
>Is there a database on the web for such things?
>

There is lots of RR related info on the Web. Here are a couple of URLs
that you can look on for the freq info.

http://www-cse.ucsd.edu/users/bowdidge/railroad/rail-home.html

http://www.wpi.edu/~elmer/rail.html

From: Robert Barker <robert@eden.com>
Message-ID: <4rh112$hke@boris.eden.com>
Source record: 230446

I'm going to the Kiss concert in San Antonio at the Alamodome on Sunday and need any freqs you have for them or used at the Alamodome. (I already have both SA's trunked systems. I think they use county's system.. can anyone confirm??)

also I was told to ask for Pace Productions, Up Stage Center as possible frequency sources.

From: khs01@www.gnofn.org
Message-ID: <4rh5t3$90t@www.gnofn.org>
Source record: 230452

Well, we all know trunk systems are a pain to scan and follow. If anyone can offer any other disadvantages to a large city going to an 800mhz trunk system please do. New Orleans has gone, and I hate it. Now the Jefferson Parish Sheriff's Office is thinking of going, and that will be even worse. Any DISADVANTAGES would help...
PS-- I happened to talk to an NOPD Radio technician.. He was a real idiot and would not leak any info to me... I thiught it was just him, so I approached another a few days later.. I got the same response...I then happened to get a glimpse of the communication center.. IT WAS HIGHLY SECURED... It looks like they don't really like the idea of people scanning the Police Department, but being in New Orleans, I guess there's a lot they DONT want us to hear...

I am glad to hear such enlightened views from a member of the public safety community. Listening allows the majority of us who are law abiding citizens to appreciate the difficult job these people have. Unfortunately too many cities are becoming obsessed with the lowest common denominator (criminals and troublemakers) and are moving to expensive trunked and digital systems.

When I travel to the LA area the following are some of my favorites:
154.830 - LAPD Hot Shots (TAC 1)
154.770 - LAPD Detectives (TAC 2)
154.995 - LAPD (TAC 3)
506-508 - Most other LAPD Frequencies
123.025 - LAPD Helicopter to Helicopter
126.800 - LAPD Helicopters (Late Night)
126.775 - LAPD Helicopter to Helicopter (Secondary)
482-485 - LA Sheriff's Frequencies
133.900 - LAX Tower (North)
120.950 - LAX Tower (South)
124.500 - Approach
128.500 - Approach
124.900 - Approach
124.300 - Approach
125.200 - Departure
124.300 - Departure

I suggest you stop by Henry Radio or Jun's Electronics to pick up a copy of Monitor America when you get to LA.

HE>This is the main reason 900Mhz phones are -so- much better.

HE>I might be mistaken (somebody correct me if I'm wrong), but that is my
HE>understanding of it.

Nope. No frequency manages to get into, or out of, a Shield Room (a structure that has solid metal walls, used in testing to avoid electromagnetic interference). No 900 MHz whatsis can get through.

At 46 or so MHz, there is some wavefront distortion due to common human structures being on the order of a half-wavelength at that frequency. Walls hold lots of things metal that can't be seen: electric wiring, plumbing pipe, metal duct work being the most common. That distortion is not as prevalent at UHF since there is more "open space" for a signal whose wavelength is short (900 MHz full wavelength is about a foot, whereas a 46 MHz full wavelength is about 20 feet).

A dry concrete wall with no rebar inside it is relatively porous to either frequency. Make it damp, or be inside a double-layer wall that has all the rebar the code requires, and it is an effective attenuator for either frequency. Inside a commercial concrete block building having a metal roof is interesting...with all the apertures closed (windows having laminated metal mesh for strength and breakage safety), it is a quiet structure over most of the VHF-UHF spectrum. Open one large metal door somewhere and that itself can act as a "slot antenna" to reradiate to the outside.

The main reason 900 MHz is used is (1). The spectrum was available;
(2). The antenna is fairly reasonable length for a handheld portable
thing; (3). The semiconductor folks couldn't go up another octave
where all the sizes make it slightly better for RF. :)

ST>How do I make a good or at least okay antenna out of copper wire ? I wan t
ST>listen to 800 Mhz. Please
ST>tell me. Currently I have it running in a rectangle shape on my ceiling. Th
ST>s for your thoughts !

Easy. Get some coaxial cable with NO connector at the antenna end.
Strip the outer jacket insulation of the coax about 3 1/2" from the
end. Unbraid the outer conductor and fold that back 3 1/2" over the
remaining uncut jacket. Use some tape to hold the braid in place.
The inner conductor of the coax should be sticking out 3 1/2" covered
by the inner insulation. [7" is a half-wavelength at 800 MHz]

Tape this thing to a wooden pole or whatever non-metal rod you have.
You have a vertically-polarized half-wave coaxial skirt dipole!

Move it around the room for best reception. Heh, it doesn't look
like much but it works perfectly fine for radio waves.

DB - Detective Bureau
A&B - ASSAULT AND BATTERY
AWDW - ASSAULT WITH A DEADLY WEAPON
BELOW- JAIL
BCJ - BERRIEN COUNTY JAIL
BOL - BE ON LOOKOUT
B&E - BREAKING AND ENTERING
CCH - COMPUTERIZED CRIMINAL HISTORY
CCW - CARRYING CONCEALED WEAPON
CSC - CRIMINAL SEXUAL CONDUCT
DOA - DEAD ON ARRIVAL
DWLD - DRIVING WHILE LICENSE DENIED
DWLR - DRIVING WHILE LICENSE REVOKED
DWLS - DRIVING WHILE LICENSE SUSPENDED
FAC - FAILURE TO APPEAR IN COURT
FCJ - FAILURE TO COMPLY WITH JUDGEMENT
FTA - FAILURE TO APPEAR
FTP - FAILURE TO PAY
GOA - GONE ON ARRIVAL
K - KILLED
LEIN - LAW ENFORCEMENT INFORMATION NETWORK(WANTS & WARRANTS)
LI - LIQUOR INSPECTION
LOCAL- IN BENTON HARBOR / ST. JOSEPH AREA
MDP - MALICIOUS DESTRUCTION OF PROPERTY (ALSO MDOP)
MIPI - MINOR IN POSSESSION OF INTOXICANTS (UNDER-AGE DRINKING)
NCIC - NATIONAL CRIME INFORMATION CENTER COMPUTER SYSTEM
OAA - OTHER AGENCY ASSIST
OPEN INTOX - OPEN LIQUOR IN VEHICLE
OSC - OFFICER SAFETY - CAUTION
OUID - OPERATING UNDER THE INFLUENCE OF DRUGS
OUIL - OPERATING UNDER THE INFLUENCE OF LIQUOR
OWI - OPERATING WHILE IMPAIRED
PBT - PORTABLE BREATHALYZER TEST
PC - PROPERTY CHECK
PDA - PROPERTY DAMAGE ACCIDENT (ALSO PD)
PIA - PERSONAL INJURY ACCIDENT (ALSO PI)
PRIORITY CALL - IMMEDIATE RESPONSE, PERSON / PROPERTY
THREATENED (USUALLY 911 CALL)

RA - ROBBERY, ARMED
RCSP - RECEIVING AND CONCEALING STOLEN PROPERTY (ALSO R&C)
RP - RAPE
RPV - REGISTRATION AND/OR PLATE VIOLATION
SOS - SECRETARY OF STATE (LICENSE INFORMATION)
STATION n - NUMBERS USED TO INDICATE A SPECIFIC LOCATION
STATION H - HOME
THREE DIGIT - CALL IN ON 911 LINE
TOT - TURNED OVER TO
TX - TELEPHONE
UBAL - UNLAWFUL BLOOD ALCOHOL LEVEL
UDAA - UNLAWFUL DRIVING AWAY OF AUTO (VEHICLE)
UDR - UNSATISFACTORY DRIVING RECORD
"UNKNOWN" - NOT YET KNOWN IF PDA OR PIA
UTL - UNABLE TO LOCATE
UUA - UNLAWFUL USE OF AUTO (VEHICLE)
VCSA - VIOLATION OF CONTROLLED SUBSTANCES ACT (DRUGS)
WEST SIDE - WESTERN SIDE OF BCSO
X-WAY- EXPRESSWAY(FREEWAY)

Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.scanner

First, THANKS! I posted a note here a few days ago seeking
input on the pros and cons of getting my daughter and her
next-door-neighbor friend either cb or 49 mhz two-way radios.

I've had nearly two dozen replies, all very thoughtful. I
had many who expressed reservations about children having CB
radios from the perspective of others they would hear. I suspect
that is unfortunate but true. CB language is sometimes pretty bad.

On a purely scientific note (and also because it was clearly the
cheapest option!) we tried a set of those "Space Patrol" quality
walkie-talkies. These had morse code and a beep button on the
front. They were WOEFULLY inadequate. They did work, but they
were only good for about the distance two people could easily
talk *without* radios! Too bad. Nice try.

I did stop at a radio shack and tested their 49mhz radios, and I
suspect something of that quality would be far better for them.
(These were the entry-level one channel "adult" models.)
I may just opt for buying the radios new, as they are not
terribly expensive, but I thought I'd post here first just to
see if anybody has anything they think might do the trick.
I've also told the girls they should put up some money of their
own if they want walkie-talkies...and maybe they'll take better
care of them. (But their budgets are limited! ;-))

Again, thanks to all who replied to my earlier post. Your comments
were much appreciated!

- Dave

Hi "News Radio"

Just a notification for you. EDACS used to have analoge speech in its older versions but newer systems are, as you said digital all the way. That means that older systems of EDACS can be monitored and newer cannot. Digital EDACS has also the option of very (DES-type) safe encryption.

>Thanks,
>Kdb

Unlike your typical $4.95 pocket AM radio, the AR-1000XLT does NOT
contain a ferrite-rod AM antenna. This means it totally relies on the
antenna connected to the antenna connector.

Most multi-band radios FEATURE reduced sensitivity to the AM Broadcast
in order to get away from the front-end overload than can effect the
other frequencies that a wideband receiver can pick up.

As was mentioned, connect a long wire or steal a ferrite-rod antenna
from an old AM set for connection to the 1000XLT.

Otherwise, use a real AM radio! It will almost always work better
than a wideband monitor will.

>Thanks,
>Boaz Entin

It seems like you might be talking about a "scanning transceiver"
here, and are looking to increase the transmitter's RF output power.

If so, you are in the wrong newsgroup. If not, you need to make
question more clear so we know what you are trying to accomplish.

Try newsgroups like rec.radio.amateur for transceiver help, or
rec.radio.swap to look for an RF amplifier. You must be a bit more
specific before you will get many educated responses that will do you
any good. Model numbers of your current equipment would have helped
too.

The frequency band you quote is a business/public-safety band here in
the U.S., and Yaesu is more known for their amateur radio equipment
than they are for business-related equipment.

Hi, I have had a PRO 39 for 2 years and I am very happy with it's performance. Radio Shack and Bearcat are made by the same company. You can't go wrong with either one! 100 Channels per second would be the best choice. So go down to Radio Shack and check them out. They will be very helpful in showing you how to use them and show you the best accys. for the scanner you choose. They also sell very good antennas. For the money, Radio Shack has the best. Good luck! Roger

> > to scanning receivers? Would the work be worth the results? Any and all
> > information welcome.

Most cell phones can not be used to scan cell phones calls, but they can
be used to listen to calls one channel at a time. In fact if you were
listening to a call on you scanner and wanted to track that call via
a cheeeep method you could turn on your cell set it to that channel and
get it to recieve the handoff (it will be in a hex digit command) then take
that command convert it to a binary string which will then tell you which
channel the phone switched to. Or some nice person out there could just
make us nice interface that would do this via a pc, but I have not
found that nice guy yet!!

Take it easy all.. Mr CodeGrabber.

2166. Comparison of BC220xlt and SC150B and PRO-??

From: Tammy Tam <tamtam@eden.rutgers.edu>
Message-ID: <31DB7B97.C16@eden.rutgers.edu>
Source record: 230523

Hi everybody,

Is there any major difference between the BC220xlt and the SC150B? I have a catalog showing that the only difference is the number of channel (200 for BC220xlt and 100 for the other). But the price is $225 vs $160.

Also, for the price of around $220, is there any PRO-?? scanner that has approximate the same performance as the BC220xlt?

Thank a lot for your help.

Eric

I don't know if RCMA would seriously consider going online. Only Captain Mauldin, General Editor of RCMA coudl answer that one. Again, would it serve their interests to go online? What about those members, who do not have access to the internet, and aren't computer illerate, and/or interested? I doubt that RCMA would abandon the format they have been using, to go online with the net. I could be wrong. I have been before, and will be again, and again.

The antennas that he is referring to are not expecially designed for
transmitting. I owned the Diamond, which I used with an AOR8000, and I
found that it performed reasonably well. However, I did not find that it
was worth $31, when compared to the performance of the Radio Shack whip,
whic sells for $10.

Welcome to Los Angeles!

The men and women of the Los Angeles -City- Fire Department (LAFD)
welcome you to listen in on our agency at work. The -most active- LAFD
frequencies are the dispatch channels:

Channel 4 857.9375 EMS Dispatch / South of Mulholland
Channel 7 859.4375 FIRE Dispatch / South of Mulholland
Channel 8 858.4375 FIRE & EMS Dispatch / San Fernando Valley

Channel 9 857.2375 Alternate Dispatch/ Brush, River, etc.

Of course, LAFD Firefighters & Paramedics frequently use all of our 18
fully repeated or 6 simplex 800MHz conventional (non-trunked) analog (non-
digital) radio channels.

A -full list- of our radio frequencies, Fire Station addresses, as well
as a "virtual visit" to our 9-1-1 Dispatch Center can be accessed by
visiting the LAFD's Internet Website at URL:

http://www.ci.la.ca.us/dept/LAFD/index.html

*Please note that the URL above is CASE sensitive (LAFD must be ALL CAPS).

Happy Monitoring!

Brian Humphrey
Public Information Officer
Los Angeles City Fire Department
200 North Main Street, #900

How could you enjoy listening to what amounted to the local repeater boneheads (granted they own the machine), ratchet jaw on top of the shuttle traffic ?

I guess the club decided it was more important to permit discussing the local traffic jams rather than allow others to listen to what one can basically get on nasa tv.

2184. SF Bay Area Freq's Please..

One of my Marine friends flew Hueys and Cobras in a USMC squadron at
Pendleton whose callsign was "Viper." Local controllers were always
"screwing up" and calling them "Piper" just to get on their nerves (on
slow days only, of course).

I was a VS-29 "Dragonfire" and was called "Dragonfly" so many times I
almost started writing that on my flight plans.

Had the same experience. Went out and purchased a used Motorola "Maxtrac"
and put a 42 MHz base loaded antenna on the van. The Maxtrac can be
programmed to scan also.

The radio is programmed via computer and you'll need to get the program
somewhere. Used radios go for about $400. A high price to pay but worth
it.

The CHP dispatches in what is called "Half-Duplex", ie the dispatcher
talks on one frequency and the cars on the other frequency. Don't worry
about hearing stuff during a hot chase, the dispatcher will always repeat
what the mobile unit is saying for the benifit of the other units because
they can't here the mobile side either.

regards

> concrete or will they bounce off them. Thanks for any info.

An advantage of 900 MHz is that the signals propagate better through enclosed spaces (hallways, rooms, etc.) because of the shorter wavelength. At 46 MHz (wavelength = 21 feet) enclosed spaces bounded by steel-reinforced building materials may be near or below the 'waveguide' cutoff frequency and the signals won't propagate very well.

RF signals don't pass through steel. They may pass through concrete with relatively low loss if there is no steel reinforcement in the concrete, or if the wave polarization is orthogonal to the rebar orientation. There was a paper in the 1996 IEEE National Radar Conference on this subject. Hope this helps.

yes, there is one small difference, which I think may be worth the extra cash, besides the extra channels. The sportcat is somewhat limited in the ability to search between a range of frequencies. For instance, lets say, you know that a freq you want to hunt for is between 150-154mHz. With the sportcat your forced to search between 148-174mHz, which can be time consuming considering the amount of limited talk time most people have on air. With the 220, you can search between what ever freqs *you* punch in, saving a great deal of frustration. When I first got my sportcat, I failed to research this and have been disappointed ever since. Other than this, the two should be identical in performance. Good luck. Sorry, I cannot comment on any PRO-xx series.

I am looking for WVSP freqs for:

I-64, Huntington to Charleston,

I-79, Charleston to Morgantown and

I-77, Charleston to Parkersburg.

I already have I-77 south, WV turnpike, at 155.43, very active.

TIA

Nick

english text follows...

!!! es ist endlich soweit !!!
---

unter t�tiger mithilfe von anderen wurde im internet eine deutsch-
sprachige scanner (funkempf�nger) use-group eingerichtet:

de.alt.radio-scanner

sollte euer news-server diese use-group nicht zur verf�gung stellen,
so probiert es unter mal unter:

news.uni-hohenheim.de

oder bittet euren provider die de.alt.radio-scanner zur verf�gung zu
stellen.

ich w�rde mich freuen wenn sich die monatelangen bem�hungen um ein
eigenes deutschsprachiges scanner-forum, in einem regen gedanken-
austausch niederschlagen w�rde.

viele gr��e

harry
hdutch@worldaccess.nl

!!! here we go !!!
---

since today, the german-language scanner use-group is open on internet:

de.alt.radio-scanner

thanks to all that supported me.

if this use-group is not available on your news-server try:

news.uni-hohenheim.de

or ask your provider to put de.alt.radio-scanner on your news-server.

please visit us.
i will be happy, if the time i spend to fight for a own german scanner-forum,
will payed back in frequent use of this group.

** Does anyone know if Scanner Master has access to data that is not
** already published in Police Call?
** ---
** OLX 1.53 --------------> 73, de NK2U <----------------
**
** --

ScannerMaster and Police Call are 2 very different products. Police Call is a refined database that is presented in 2 different sorts. The first is by State/Name, the second is by Freq/State/Call Sign. Other info is put in as well, but it is not real detailed. Coverage ranges from 2 to as many as 9 states.

Scannermaster books are highly detailed communications manuals for specific areas. In my book, the ScannerMaster Illinois Communications Guide, we list freqs, PL tones, channel numbers, what the channels are used for, maps, and a myriad of other details for a smaller area than Police Call.

One must decide which product is better for him. If you live in an area covered by a ScannerMaster guide, then you really can not go wrong with it. If not, then Police Call may be your only answer.

Even though I write ScannerMaster books, I never leave the house without my Police Call. I have bought a new Police Call every year for at least 17 years, and wish I kept my old ones!

ScannerMaster books are usually more expensive than Police Call but you are getting something different for your money.

Do we have access to data that Police Call doesn't? Yes and No. Police Call is based upon the same FCC records that ScannerMaster starts with. The difference comes in when ScannerMaster authors massage this data, add channel designations, tie in repeater inputs/outputs, add PL tones, maps, and the rest. I have sources in many local agencies tha provide info that Police Call doesn't.

Mundelien College is now part of Loyola, isn't it?

It is located in the Loyola area on the far North side. CFD uses 154.130 for Dispatch ("MAIN"), 153.830 ("FIREGROUND"), 154.385 ("COMMAND") and 460.600 for Ambulances. On the south side, listen to 153.770 ("Englewood") and 460.625.

Not far from the campus is Evanston and the other NorthShore suburbs. They use 154.160. In the Skokie/Des Plaines/ Park Ridge area, listen to 154.340. Northbrook, Glenview, and others use 154.445. 154.265 is the mutual aid channel, and most use 153.830 for Fireground.

On the "EL" listen to 470.6375 (Rail Supervisors), 470.9875 (Emergency), 471.0875 (Operations on this line) and 472.2375 (Canine teams)

At Wrigley, listen to 468.5875, 469.3125, 469.5875 and 460.875

Enjoy!

I spoke with a police dispatcher here in El Paso, Tx and was told that
the reason for this system is that in the past criminals only had to
listen to a few frequencies to see if police had been dispatched to the
scene of the crime. Each radio transmission can end up on a different
frequency and this is hard to track.

I wished they had the old system. It was nice to be able to follow an
entire event on one frequency.

> Any thoughts would be appreciated!
> Thanks!
> DrewDrew, there is no doubt you will gain signal in the 46Mhz band just by clearing obstructions if nothing else. FM is line of sight as we know and that ought to give you a few more neighbors calls. Although db loss won't be apparant at 46Mhz you might see slight loss in the 800-900 area, depending on coax in use. RG6 I hope.

Quick follow-up in case anyone was interested in the outcome of my search...and a couple of people were curious...

We reached a rather unorthodox and unexpected solution. The girls got a wireless intercom system, the type that plugs into the wall and transmits through the wiring. It is not mobile, but the quality is excellent, it has the call function, etc.

We picked these up as a test, actually. They were less expensive than the RS 49 mhz radios, too. I expected they would work in my house, and they did, that was the first test. Then wer tried from the house to the garage...still good. I was really surprised when they worked just as well from house-to-house.

Perhaps it is obvious that I know nothing about electrical wiring. Maybe both houses run off the same transformer or something. I haven't a clue why they work, but they do. Very nicely, actually. No background noise, can leave them on all the time, no batteries to go dead, etc. They seem quite pleased.

Thanks again to all who offered comments and suggestions. - Dave

A while back I reqested the 26 trunking frequencies that the Sacramento County Sheriff has gone to. They are from 867-869 MHz. I can't find my copy. They have now left the UHF freqs.

If anybody has them, could you please e-mail them to me? Who ever sent them before, found them in some frequency guide.

Thanks - Jim

Alright I found a source and ordered a manaul, but I still would like
to know how to mod this scanner for more channels. Does anybody know
this mod.,and if you do would you please E-Mail it to me. Thanx.

Not unusual at all. It doesn't use conventional radio transmission but
rather sends the signal via the mains wiring.

>for this radio. Thanks
>
>Dave
>

Dave,

Telecode in Yuma Az supposedly has mod info on this scanner that includes "Beep disable" I haven't verified this as I haven't purcased their book. There are 2 mods I know of, one is to turn the unit off, hold down the 2-9-Lockout keys and turn the unit back on, this erases any saved freq's and loads 25 test freq's, one in the middle of the "locked out" cell band and another in the 88 MHz range. There is also a mod to shorten the "squelch tail" by adding a resistor to the circuitry, (I haven't done this as it hasn't been a problem) The "keyboard" mod worked on my unit with a date-code of 11A4 which equates to November 1994. If you contact Telecode, please share what you find out from them. The keyboard beep annoys my wife greatly, I'd like to disable mine too, (the beep, not my wife!)

Good Luck

Randy.

If you live in Massachusetts, you can join the localized
mailing lists I've created. Both lists have gray areas around
them, so we do discuss areas outside of the primary regions.

(These lists are meant as regional alternatives to the)
("scan-l" mailing list which is nationwide.)

scan-mass-east

This list covers all of Eastern Mass from West of Worcester
to the East right into the water.

To subscribe to this list, send a message like this:
To: scan-mass-east-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-east-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests currently go out Monday and Thursday mornings.

- -

scan-mass-west

This list covers all of Western Mass from East of Worcester
to the West.

To subscribe to this list, send a message like this:
To: scan-mass-west-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-west-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests currently go out about every two days.

- -

If you have direct WWW access, you can get on (or off) of the
lists via the simple interface at:
http://www.netspace.org/cgi-bin/lwgate/nest/

http://www.netspace.org/cgi-bin/lwgate/scan-mass-east/
http://www.netspace.org/cgi-bin/lwgate/scan-mass-west/
or for the digested versions:
http://www.netspace.org/cgi-bin/lwgate/nest-digest/
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east-digest/
http://www.netspace.org/cgi-bin/lwgate/scan-mass-west-digest/
depending on which list you're interested in.

>this type of unit? Regards, Ray Miller

Not necessarily. The intercoms I am referring to are those that plug into your AC outlet and then use the household/business indoor wiring to transmit the signal. Since the purpose of these intercoms is local communication there's no need for elaborate antenna systems (or a more basic antenna and extreme signal loss from the mismatch). It seems to me their choice of frequency isn't so odd because it's high enough to be above the "electrical noise" of the wiring network and low enough that RF radiation would be insignificant.

Hi all --

It seems my BC-250 has developed what appears to be a common problem
with the 250's. The problem that I am having is:

In article <392@rehab2.UUCP>, dans@rehab2.UUCP (Dan Schein) writes:

> My old stand by scanner (Bearcat 250) has developed a problem....
> all 50 channels have the same freq (9xx.xxx) with delay
> any lockout set. When I try to reprogram a channel it goes right back to
> the (bogus) 900 frequency.

Looking thru the FAQ for a fix, I see the following mentioned:

3. See Martin Toomajian's article, "Bearcat 250 Erratic
Display Cure", in January 1987 Monitoring Times.

Unfortunately, I don't have Monitoring Times. Does anyone know how to
fix this problem?

thanks -- Mark

KC5KTO's radio page has software for decoding POCSAG. I have not tried
it so you are on your own. This is great scanner page.

http://www.zianet.com/kc5kto/scanner.html

Principles aren't of much account anyway, except at election time.

Any form of secure communication can be cracked. It just a matter of time and money to do it! You must ask: Is it worth the time and expense to "crack" the communication in question? I'd guess the time and money factor to "crack" your neighbors cordless SS digital communications is several orders of magnitude higher than what you would be willing to spend! Until someone makes this hardware cheap and fast, it will remain very secure.

> Denis
>
>

The pack is 6 2/3 size AA NiCads wired in series and assembled in a 3X2 configuration. If you open it up you'll see what I mean. Make sure that the tabs used to solder the cells together are VERY thin! The R1 doesnt allow for much more height than a 2/3 AA cell height. Digi-Key (1-800-DIGI-KEY) will make you a pack like this for about $20. Theirs comes with solder tabs, not a connector, so you'll have to desolder the connector on the old pack and solder it onto the new one. Icom's pack comes with the connector, but it costs $65!

(snip)

Some "unofficial" codes we use are:

DRT Dead right there
BOW Bag of worms (complicated call)
COW Can of worms (see BOW)
DB Dirt bag
CF (pronounced "Charles Frank") Cluster F*** (see BOW and COW)
For some reason, these are rarely used on the radio, and only then on the
midnight shift...

Some official medical codes:

LOC Level of consciousness
PEARL Pupils Equal And Reactive to Light

2274. Re: Importance of scanner/ant. cable impedance match?

The amount of signal loss by impedance mismatch is trivial compared to how much is loss in common 50-ohm cables (like RG58). These cables were designed decades ago for low frequency operation and do poorly at VHF-UHF frequencies. You would be much better off using "RG-6" commonly sold for cable TV distribution. It is especially designed to have low loss and leakage at VHF-UHF frequencies. The fact that it is 75-ohm will cause no problem. In fact, the actual impedance of a antenna varys depending on the frequency anyway.

Further off topic: We had a guy in the USAF one time up in Anchorage
who tried to dry off his gloves in the microwave. He was a crew chief
on C-130 aircraft, so his gloves were pretty well soaked with de-icing
fluid, hydraulic fluid, jet engine oil and cleaning compounds.
There's a metal buckle on the back of the gloves, which causes sparks
when microwaved. About 45 seconds into the "cook cycle" the stuff
saturating his gloves ignited and blew the door of the microwave off
its hinges and clear across the room....

the AOR-1000 works best if you use an antenna cut for the frequency you
are trying to monitor...ie longer antenna for lower frequencies. the BNC
makes it easy to change antennas according to what I am listening to.
you can buy antennas cut for the frequency range at most radio shops.

> >
> > Any thoughts would be appreciated!
> > Thanks!

Hi Drew. The concept of "the higher the better" works here. Just wanted to add a few things. Which discone
do you have? The 46-49 Mhz range is enhanced somewhat by the center vertical element which ICOM and Diamond
versions have, but not the Radio Shack version. It also is known to help the frequencies between 25 and 30
Mhz. I have a fairly long run to my discone on my tower. I use the ICOM discone, with Type "N" connectors,
and "Poor Mans Hardline" CQ4XL, available from the WIREMAN in SC. This goes down to a BNC connector after a
lightning arrestor. You will be impressed that the antenna is resonant on all the ham bands 50 mhz and above
as a transmitting antenna! It is up about 50 feet.

I have also been impressed by the "scantenna" from Grove. It is up a bit higher, and fed with "QUAD SHIELD"
cable from radio shack. Its reception in the 46-49 Mhz range is impressive. It looks like a cheap antenna
with no reason to work well, but it does. It is not a transmitting antenna.

Hope this helps!

From: "James F. Boehner, MD" <jboehner@csra.net>
Message-ID: <31DE9FD9.79B7@csra.net>
Source record: 230422

I have been hearing quite a bit about the "disappointing BC2500XLT" and the new improved BC3000XLT/UBC3000XLT.
Is there anyone who has had experience with both units? I thought the 2500 was an excellent scanner with the
exception of the large size. Please let me know the improvements of the newer unit.
Also, on the UK UBC-3000, what is in the place of the NOAA WX stations scan feature?

Finally is there anyone in the US that has been using the UBC-3000? Is the british band plan significantly
different than the US band plan in the VHF-Lo VHF-Hi UHF UHF T-band and 800 mhz frequencies? If so, is there a
way to compensate for that?

Questions, questions, questions!

Thanks in advance for any help!

Newsgroups:
rec.radio.shortwave
Subject: alt.scanner

Hi. A note to BC760XLT
scanner owners. I recently agreed to
modify one for a friend a found the following two notes o
f interest.

1. It was shipped with a how-to on the cellular restoration
mod that appears more
comprehensive than those I've seen

WARNING: If you don't know enough about electronics and

about what you are about to do, you might toast
your radio an
d if you toast your radio, you only
have yourself to blame; you can't blame me or
anyone
else! Also, the moment you twist a screw
to remove a cover, your warranty is gone! Also,

monitoring of certain services in certain freq
ency
ranges is prohibited in certain areas.

a) The following applies to models manufactured
during
1989 (HI code date suffix) or later.
b) Place radio so the front is facing you; remove top cover

c) You are looking at the FOIL side (other than surfa
ce mount
components and a large upside-down Sanyo IC) of the PCB.
Locate this Sanyo IC. A
long row of solder pads just
above the Sanyo IC identifies pins 1-32 of the microprocessor.
Pin 1 is
on the left and pin 32 is on the right.
d) Using a sharp-p
ointed tool, cut the two traces leading
to pin 26 of the microprocessor IC. There is a trace

coming
from above pin 26 and a trace coming from below pin 26.
e) Solder-bridge pins 19 and 20 together of the
microprocessor
IC.
f) Solder-bridge pins 26 and 27
together of the microprocessor
IC.
g) This part is tricky to identify without a diagram. Directly

above pin 27 is a three terminal, surface-mounted transistor
device. The lower terminal of this device used
to be connected
to pin 26 of the microproce
ssor IC until you did step d)
above. Solder-bridge together the two left-hand side
terminals of this
device.
h) This part is also tricky to identify without a diagram.
Locate the trace that travels from pin
19 of the microprocessor
IC to pin 26 of t
he microprocessor IC. Near pin 26, this
trace will have been cut as per step d) above. Along the

length of this trace, there are two devices that are physically
mounted over it. Of these two devices, the
two-terminal device
on the left-hand side is a
4.7k chip resistor marked "472" on it.
It is mounted over the trace in an area approximately below pin

20 of the microprocessor IC. Carefully remove this chip resistor
and tape it to the inside of the scanner
cover, just in case...
i) Put the radio back to
gether and try to enter 845. If
845.000 appears on the LCD, you've done the mod successfully.

2. A
$60 option for the BC760XLT is a CTCSS tone decoder board that
plugs directly into the scanner board.
Catalogues indicate you
must purchase a $10-$15 switch assembly i
n order to enable/disable
the CTCSS option. You do not need to buy this switch if you
are comfortable
enabling the CTCSS as follows:

a) Following installation of the CTCSS card on the component
side
of the circuit board, you will have used two row-pin

c
onnectors (one that the CTCSS board plugs directly into and
one for a ribbon cable leading from the
CTCSS card). This
leaves a third, five pin, row connector unused in the general
area of the
CTCSS card. This is where the "required"
switch is suppo
sed to plug in.
b) Locate this 5-pin connector on the FOIL side of the PCB
and mentally number
the pins 1 to 5, from left to right
(with the radio front facing you). The CTCSS option
is enabled
by connecting pin 5 to pin 2. I did this by
ru
nning a wire from pin 5 to the top of the surface-mounted
component directly above pin 5 (which is
connected to a large
foil area which is connected to the (mentally numbered) pin 2).
Use your
fine soldering skills to do this however you like.
c) On power
-up, the string "CTCSS" will appear on the bottom
right of the LCD display. The instruction guide tells
you
how to punch in PL tones to use the CTCSS option.

I did the above two mods and have found the
radio to be working
flawlessly. Your mileage may vary. Now I ha
ve to return
the radio to my friend... but without some further "testing"
of course... :-)

Peter

> it and get it to band scan?
>
> <Alan>

Alan,

Press MANUAL
Key in the lower frequency limit, press LIMIT
Key in the upper frequency limit, press LIMIT
Press SEARCH

And it will search from the lower limit to the upper limit. By the way,
it will remember these limits, so in the future, if you want to search
these same freq's, just press SEARCH.

Have fun!

*** Bob's Tip of the Month ***

(from Monitoring Times, January 1993, Dial 1-800-438-8155, Great Magazine!)

Realistic (R) PRO-39 Cellular Restoration (Page 107)

[with a few comments added by someone who witnessed such restoration -jqt]

The recently released PRO-39 handheld scanner from Realistic (R) is a fine performer, but its 800 MHz range is interrupted by the factory censoring of cellular frequency coverage. Long-time MT supporter Larry Wiland of Youngstown, Ohio, would like to share the simple fix. Remember, however, that it is unlawful to listen to cellular phone calls.

(NOTE: These procedures may void your warranty. Do not attempt them unless you are familiar with small component soldering. Monitoring Times accepts no responsibility for damages resulting from attempting this modification.)

TOOLS NEEDED: Fine-tipped soldering iron, desoldering wick, small Philips screwdriver, long-nosed pliers, rosin-core solder.

(1) [Turn off your radio. Removing the batteries when the radio is ON can erase the memory! -jqt] Remove the battery door, holder and [battery pack] from the bottom of the radio.

(2) Remove the four screws from the back of the scanner and carefully lift the back off.

(3) Unplug the two wiring harnesses at their connectors and remove the six bright colored screws [that hold] the circuit board in place. Unsolder the ground wire from the lower right corner of the circuit board. Unsolder the two wire connections from the BNC antenna connector at the board. Carefully lift the board (grasping it near the Molex connector) and set it aside.

(4) Remove the two bright colored screws from the next circuit board. Carefully unplug the two-wire connector [and remove the board, as I recall -jqt]. Unsolder and lift the rectangular metal shield exposing the diodes.

(5) Carefully unsolder and remove diode D6 only; this will restore the missing cellular frequencies which can be searched in appropriate

30 kHz steps.

This completes the cellular restoration. Reverse all procedures
to reassemble the radio and test it by entering any frequency between
869-894 MHz. [If you are as lucky as I was, the memory will still
contain your other frequencies! -jqt]

Radio Manager (RM) for Windows is a control program for the following
computer controlled scanning radios.
AOR AR8000 and AR2700 (upload/download, band plan editing, remove blocking -
registered version only)
OptoElectronics OptoScan456/535 Realistic equipped radios
OptoElectronics Scout
Icom R7000, R7100, R9000, R71 and Other Icoms supporting the CI-V protocol.
Featuring
Scanning
Searching
Manual Tuning
Individual Channel and Bank Descriptions
Individual Channel and Bank Lock Outs
Temporary Channel Lock Outs
Trunk System Lock Outs
Lock Out Review
Individual Channel Delays
User Defined Delay Amount
5 Priority Buttons with Priority Checking
Quickly Tune Local Weather or Your Favorite Frequency
Signal Detection Indicator
User definable Banks and Channels
User definable Search Ranges
Hit List for logging active Frequencies and much more
Birdie Lock Outs
Auto Storing of New Frequencies
User Friendly for Interactive Computer Controlled Scanning
User Customizable
DBF Data Format
Import UFDBF Files
Small and Large Manual Tuning Steps
Some Radios Also Feature
Upload and Download Radio's Memory
Signal Strength Detection and Logging
Squelch Tone Detection and Logging
DTMF Detection and Logging
Muting
Attenuation
Download Unregistered version

Is it possible to receive the Space Shuttle Freq(s) in Atlanta?

2300. Discovery HTML Served from W95 PC to Net

Newsgroup: rec.radio.scanner
Date: 1996-07-06 00:00:00 UTC
From: 4-phun@ilinks.net
Message-ID: <MPLANET.31def4844-phun9897c9@ilinks.net>
Source record: 230435
Cross-posted to: alt.bbs.wildcat,alt.radio.scanner,comp.os.ms-windows.apps.winsock.misc,comp.os.ms-windows.apps.winsock.news,comp.os.ms-windows.nt.advocacy,comp.os.ms-windows.win95.misc,rec.radio.scanner

I have made an exciting discovery. One reason I purchased WC5 was to have the ability to offer access to my computer to the Net and to serve a bunch of data I had already in html format from the AR8000 Scanner Project. WC5 has been somewhat ok for what I purchased it for but I have discovered I do not even need it! I have figured out how to offer access both to anon users and registered users in a tightly controled manner. Anyone using a regular Web browser (Microsoft IE 3.0 prefered of course!) can access my data and view the web pages. Others can ftp in and upload and download files! I can offer chat with a ringing phone at my end. This chat supports unlimited users also. Up to 256 total connections are possible in the current configuration with in theory up to 50 people who can connect via ftp.
Realistically unless I upgrade to ISDN dual channel the bandwith is far too limited with a 33.6 modem to support but only a dozen or so simultaneous connections. An the best part is that the software to do this doesn't cost one red cent at this minute to do this if you have Win 95!

I can force upload and download ratios on certain classes of users if I want to make the free loaders assist in making it a better system.

Since I have a dynamic IP addresss there is one small piece of the puzzle that has a suggested shareware price of $20 but that is it! I haven't tested it yet but I am certain I can also have Win 95-NT users call me locally and do all the above. So far I can fully test most parts of the configuration locally by logging into my computer as local host 127.0.0.1
Also I can still run WC5 at the same time to allow a couple of seperate controlled entrances to the computer.

Additional controlled testing is still in progress but so far it really looks good. Anyone with Win 95 who is a power user can serve html web pages to the net and perform the other tasks associated with a BBS without even purchasing Wildcat 5 BBS or any other BBS program.

If you would like to share in helping me test this please email me at this url mailto:4-phun@ilinks.net
with "Subject:I want to help test Internet Server"
Preferably I would like to find a couple of folks that have an interest in the AR8000 radio receiver or radio monitoring the Olympics but failing that any one will do.

I have a similar but seperate project for those who are connected to phun net. Email me, Victor Healey, at phun net Atlanta node for information with "Subject:I want to help test P-Net Server".

I would not think the customs people would check..
It's only illegal to make them. in the USA..
It's also illegal to listen to cell..
I would not worry about loosing money from buying a scanner in Canada
and having them mail it here in the USA!

Go for it...

have fun...

Boy isn't that the truth. Just today a local police agency switched over to their "Utility" frequency. It's not listed in the current Police Call, it is in an older one, and it's still in use. Those old books come in handy sometimes, if we remember to keep them.

2310. 2 antennas on the same cable ?

Date: 1996-07-07 00:00:00 UTC
From: peterb@inet.uni-c.dk
Message-ID: <4ro691$41b@news.uni-c.dk>
Source record: 230249

Hi,
I have a question for the antenna experts ...

Is it possible to put up two antennas, e.g. one discone and one directional antenna on a rotor and then feed both signals into the same cable and into the radio at the same time, thus having both omnidirectional coverage from the discone and a better directional signal from the direction the rotor is pointing ?

We are of course talking receive-only, no transmissions.

Regards

Peter

2311. What Scanner to buy

Newsgroup: rec.radio.scanner

2312. Newer Pro-51, 800MHz Restorable?

Newsgroup: rec.radio.scanner
Date: 1996-07-07 00:00:00 UTC
From: Rob May <rmay@wt.net>
Message-ID: <4rng0j$d43@news.wt.net>
Source record: 230295

I recently purchased a used Pro-51, but it is too new to have all of the 800MHz freqs. Also, the 2-9-L/O trick doesn't work. All the test freqs are in the legal bands. Can 800MHz be restored on this radio? Thanks!

2313. AOR 2001 mods.

Newsgroup: rec.radio.scanner

I have an old AR2001 that seems quite deaf around 400Mhz upwards. It works, but the sensitivity is very low.
Does anyone know of any mods. to this unit that may help?
Does anyone have any allignment procedures/workshop manual that may help?

Any help would be appreciated.

Hi there,

I'm after plans, diagrams and calculations or anything else to help me bulid a scanner antenna. I've built a few over the last coupla years, including a 450Mhz co-linear. I plan to build another one (mum nicked it after i got her addicted to the scanner), anyway, i would like to try building a discone as I know they are have great bandwidth and good swr (for when i get a transmitting licence) :)

So if ya got some site's (or docs) for plans or other information on antenna design please mail me the url's :)

Thanks in advance :)

kibbet
cjag@camtech.net.au

ps. if there are any aussies around with a site of aussie freq's please send the url :))

The Message Tracker is great. They make three versions starting
around $129.00. The program will retrieve golay and 512, 1200,
and 2400 pocsag formats...numeric or alpha.

You may contact them at: KLTsupport@aol.com or call 212-414-7198.

As far a legality is concerned, it depends on who you listen to. I
have been told that monitoring cordless phones is illegal, but
in the Electronic Communications Privacy Act it states you may
monitor the "radio portion" of a cordless phone.

Read it for yourself. The Electronic Communications Privacy Act
webbsite is:

http://www.eff.org/pub/Legal/ecpa.law

Let me know if you understand it the way I did!

Not since the passage of TDDRA (1990-ish). Cordless
phones have been added to the list of "banned" radio
signals. In several states, cordless phones were illegal
to monitor long before ECPA was passed anyway.

2328. PRO-46 Power Problem

Newsgroup: rec.radio.scanner
Date: 1996-07-07 00:00:00 UTC
From: apache@i1.net
Message-ID: <4rokl5$g5p@news1.i1.net>
Source record: 230311

My PRO-46 quit working when its being powered by the AC power supply a couple of months ago. It works fine off batteries. The power supply is definitely still good. When its plugged into the charging jack, it still charges the batteries. I took the radio apart and tried to trace down the problem with no luck. Its getting power to the board but I don't know where the problem is. I also tried swapping power supplies with another radio. That radio worked fine with my power supply and my radio still did nothing.

I posted this problem back when it first happened but received no miracle advice. Well, today I was messing around with it again and discovered that every time I turn on the unit with no power connected and no batteries installed, then plug in the power supply while the radio is turned on, it powers up and scans but will not receive anything at all. Turn it off then back on again with power connected and "nothing". Unplug the power supply then plug it back in and it comes on and scans but will not receive anything. It works fine off batteries alone.

Anybody experience a similar problem or have any ideas on how to fix it now that I have a little more to go on?

Is the AR-8000 able to be modified for picking up cellular freqs? Not
that I would ever consider using it that way --- just curious!!
Thanks.

EW

British Airways uses the "Speedbird" callsign
South African Airways uses "Springbok"
Pan Am used to use "Clipper"
and Finnaviation use "Bluebird".
Value Jet uses "Critter"
United Express uses "Blue Ridge"

Hello, All

Maybe I can be of help to some of you guys looking for airline
callsigns. - For Some 4 years or so I've been 'collecting'
airline data and putting them into a dBase III file.

The columns are:
airline IATA 2-letter-code
airline ICAO 3-letter-code
airline name
airline callsign
country the airline belongs to

BTW I also have a file containing about 10.800 airports.

This file contains
3-letter-ICAO code
4-letter-IATA code
city name
country name
airport's name/remarks

* The fils are far from comple but maybe some of you can
help me minimize the number of empty columns in the files.

* If anyone is interested in receiving these files, e-mail
me and I shall be glad to send it to you - under the
condition that you supply me with all updates and amendments
you come across.

Greetings from the heart of Europe
Markus Buttinger, Salzburg,Austria

It's because they are on the same side of the transformer.
I use them in my house, to talk between floors, and they work fairly well.
Ofcourse, there is a risk. With one of these, you could potentally listen
into other neighbors...

Ryan:

I can be done by cloning the electronic serial number in one phone, to match that of another. A couple of problems enter the picture. You can only use one at a time. They both ring on the same incomming calls. It is Federal offense to do so.

I'm not expressing an opinion, just the facts.

Try the NASA home page, then go to the shuttle section. There is a listing of all the frequencies you can search. In my area I use a Ham repeator. You can hear Houston, Huntsville, and the shuttle crew.

Steve

(repeater input to the) campus police departments' main dispatch frequency.
When the caller picks up the handset, a digital voice announces `request for
assistance' then gives the call-box location.

The mobile use of a receiver that is capable of listening to the police is illegal in the state of Florida. BUT, the law does state that if the operator has a valid amateur operators license, it is allowed.

Clear up your question?

It is even harder to track or listen to when it is digitally
encrypted.

And as far as trying to convince them that the system has
disadvantages, I wouldn't try it - you're wasting your time.

The Southwest Frequency Directory is available at several stores in Tucson and Phoenix, including Spy Headquarters, Bronco One, Apollo Communications, & Pace Engineering. The new 3rd Edition will be on the shelves next week, selling for around $20. It covers the entire state of Arizona, including ALL public safety, aircraft, military, security companies, utilities, media/news/press, schools, recreation, hotel/resorts, golf courses, hospitals, federal government, etc.

> Will the new Icom have SW capabilities that would favorably compare with,
> i.e., the Drake R8-A? Or, will it still be preferable to purchase, i.e.,
> an ICOM 7100 and an R-8A for best performance?

Excellent questions....

Icom is claiming that the 8500 will be based on the IC 9000, which is a top notch SW receiver, as well as a
great performer as a VHF/UHF receiver. If that's the case, you will probably be happy with the 8500, but if
it's not....

The other argument is that if you have 2 receivers you can listen to 2 things at once... something you can't do
if the 8500 is your only radio.

Keep us posted as to what you decide!

Ken

There should be no problem doing this. Be sure to use shielded
(preferably RF) cable, ground the shield and BNC, and keep the cable
as short as possible while no routing near any digital IC's.

Good luck, Mark

I already have a copy, thanks. But I don't particularly care for the
layout of info. It seems the same as Percom type data base.

The reason I would like to find the ScanMaster for AZ is that info
usually is verified for the listeners, by listeners, and includes PL's
etc. Nothing against your book, just looking for "additional" info.

2352. CB antenna for Scanner?

Newsgroup: rec.radio.scanner
Date: 1996-07-07 00:00:00 UTC
From: gradyr@mindspring.com
Message-ID: <gradyr-0707961752510001@news.mindspring.com>

Just for kicks, I hooked my scanner up to my CB antenna in my truck to see how well it worked. It worked quite amazingly well. It is a Frances 5 ft antenna. Scanner people...how adequate is this antenna and CB people, if I buy another Frances 5ft and mount it so it looks like a dipole, will the 2 interfere? Any comments greatly appreciated!

TIA,
Grady Russell

: and transmits through the wiring. It is not mobile, but the
: quality is excellent, it has the call function, etc.

: We picked these up as a test, actually. They were less expensive
: than the RS 49 mhz radios, too. I expected they would work in my
: house, and they did, that was the first test. Then wer tried from
: the house to the garage...still good. I was really surprised when
: they worked just as well from house-to-house.

: Perhaps it is obvious that I know nothing about electrical wiring.
: Maybe both houses run off the same transformer or something. I
: haven't a clue why they work, but they do. Very nicely, actually.
: No background noise, can leave them on all the time, no batteries
: to go dead, etc. They seem quite pleased.

What a unique idea!

From what i understand, the intercoms use a low power RF in the
Longwave band for transmissions. The electrical wiring in the house is
used for an antenna. Communications can be conducted between units as
long as they share the same transformer. It appears you and the neighbor
share the same transformer.

Super! You have satisfied their needs for a very low cost... PLUS you
eliminated risks of exposure to unwanted interference/language. Also...
technically they are communicating via radio, so all the requirements
were met.... Plus the kids like the arrangement.

I'd have never thought of that idea. So much a very obvious solution though.

One more benefit.... They won't be tying up your phone lines! :)

Cheers!

Police Call might be a place to start.

Or...let us know what state/county/city, etc., and maybe we (everyone else who reads these postings) can help. I just happen to have several variations of FCC databases on CD-Rom, and would be glad to look them up for you.

Or...waltz up to one of them and ask to see the radio, or perhaps they know already and will tell you what they are.

Or...ask them who dispatches them. Often times it is the Highway Patrol/Sheriff/City agency that they serve in. (Worst thing that will happen is they well tell you to take a flying leap.)

Or...ask for a tour of their dispatch center and poke around until you find the FCC license that SHOULD be hanging on the wall at the control point, which is the dispatch center, generally speaking. (The "flying leap" scenario may apply here, too.)

Or...hit the local Radio Shack type store and see if they have a list.

Good luck,

Andy

2366. BC760 Tech Question

Newsgroup: rec.radio.scanner
Date: 1996-07-08 00:00:00 UTC
From: n9jig@TheRamp.net
Message-ID: <n9jig-0807962104100001@mund-ip-3.theramp.net>
Source record: 230195

Asked before, but never answered...

A friend was working on his BC760, and accidently severed a small (3/4 in by 3/4 in) board that was attached to the main board. This small board was labeled "WIND UNIT", and had a couple small discrete components on it. No difference in operation of the radio has been detected since the sudden removal of this board.

Any idea what this thing was supposed to do?????????

Radio Shack Scanner: Pro 2021 $100.00 OBO + shipping

Realistic Pro-2021
VHF/UHF Direct Entry Programmable 200 Channel Scanner Radio

This programmable radio is in excellent condition, yes fully functional. It brings you the most exciting listening of all - local events as they happen, not just hours later through an edited newscast. You'll hear police and fire departments at work, ambulances, amateur radio, weather, Amtrak and freight trains, taxis, plus government, military, marine, and business services, aircraft and much more.

You'll have keypad access to over 23,000 frequencies.

Features include:

o Ten 20-channel memory banks
o One 10-channel monitor bank for temporary storage and priority freqs
o Rapid transfer from Monitor to Permanent Memory
o Large multi-purpose LCD shows which channels and frequencies are being scanned, monitored, programmed, as well as the status of the channel and operation mode of the PRO-2021.
o Provides optional two-second delay to eliminate missed replies on any channel.
o Holds memorized frequencies with internal 9-volt battery backup
o Covers 30-50 MHz (VHF Lo)
50-54 MHz (ham radio 6m)
108-136 MHz (aircraft)
138-144 MHz (government)
144-148 MHz (ham radio 2m)
148-174 MHz (VHF Hi)
380-450 MHz (ham radio and government)
450-470 MHz (UHF Lo)
470-512 MHz (UHF Hi)
o Built-in internal speaker
o External speaker jack
o BNC external antenna connector
o 120-volt AC operation with power cord
o 12-volt DC power jack for automobiles and RVs (negative ground)

Mobile mounting bracket can be purchased at your local Radio Shack store.

Includes owner's manual and telescopic antenna.

Price: $100 OBO + shipping

Hello radio fans,
I am new to scanning I need help on hooking 2 or more scanners to a discone I have
on a 30 foot pole.
I figure I need a spliter?
If so where can I find one ?
will I lose a lot of my signal?
Is this a good or bad idea?
what about antena switch, seem like to many conections to
me.
Also what is a good antena for 40 - 50 mhz
I have a big spool of 75 ohm cable (cable tv stuff)
will it be efective
can I use it without damage to equipment
Note* at this time I do not do any transmitting,but hope to get licence in the future.
Any help from folks that Know about these things will be greatly apreaciated

Best Regards,
Butch

i would like to know if there are unpublished freq's. that the services police, etc. that for some reason don't make the freq guides.

in my area the sheriffs and sp refer to channel numbers, for example, channel 7, and the best extensive search i can make only comes up with say, four.

if these fcc master lists they compile the guides from are accurate, why are there missing freqs?

I recently bought an SBE Opti-Scan 10 channel scanner (VHF lo/hi + UHF) for $5. After spending a bit of time getting it powered up, it works fine. Unfortunately, the "optical card" is programmed to frequencies I don't care to listen to, and, of course, no programming instructions came with the scanner.

Does any one have info on how I could get my hands on a programming guide for this little gem?

I'm not positive on the full extent of the law but in the ECPA Section-2510, Part-(16), SubPart-(D) It basically says that one CANNOT monitor transmissions made under a Common Carrier License unless its tone-alert only. Alpha Pagers are not Tone Alert & I can't speak for the whole US but just about everything in NH & Mass I'm aware of that transmits alpha pages is licensed under Common Carier.

Look for a ARRL antenna book.
Any ham radio shop should have it.
You may have to git it through mail
order.
I use a discone. It does work well
from cordless to cell phones.
I get so many cordless phones in
the evenings I must go to the whip
sometimes because of overlaping
phones on same freq.

The formula is 492 divided by the frequency in Mhz, for an antenna length in feet, for a half wave antenna. Thus, a 100Mhz frequency would call for a 4.92 foot antenna, or 59.04 inches. 400 Mhz, 14.76 inches, 39 Mhz, 12.6 feet, 40 Mhz, 12.3 ft. To make a full wave antenna, double the length. A half wave is almost as efficient as a full wave, though. Good luck.............dick

A simple formula to make a 1/2 wave dipole is: 468 divided by frequency in Megahertz (468/Mhz). This is an antenna that is fed in the middle of that length by coax cable with an impedance of 75 ohms (RG-59, RG-6(cable tv cable)) and connected to the scanner with an appropriate connector. These parts are all available at Radio Shack. Realize that radio signals are mostly vertically polarized at these frequencies, so mount the dipoles vertically.
The quickest and cheapest antenna to make is a 1/4 wave ground plane antenna for 100 mhz and 400 mhz. Get an SO-239 chassis connector, and get five coathangers. Straighten them out, cut them to 1/2 the size of the above calculation, and solder well. (Actually the radials, or the elements that will be soldered to each of the 4 chassis mount holes will be slightly larger than the center element). Then, just get some connecting cable (50 ohm RG-8 or RG-8X is best) to attach the SO-239 connector to the scanner. Note: The radials should be 90 degrees or slightly greater from the center element for 50 Ohm impedance.
Additional info can be obtained from the antenna compendium put out by the American Radio Relay League

'73 and good luck!

The is a ham antenna called the "Ventenna" that will go right on the
vent on your roof. It is paintable so that it will match your current
pipe. It is available in a dual band version for 144/450 mhz, and that
should be more than sutable for most scanning situations. If you don't
want a visible antenna on your car, you can get a signal splitter from
grove enterprises to use your current car antenna and share it between
your car radio and scanner. Performance will be compromised, though.
If you dont have a cell phone, there is a "cellular look-alike" antenna
that can be mounted on your back windshield as well.
Grove's link is:

http://www.grove.net/index.html

I doubt that an agency goes to a multi-million dollar trunking system with the primary reason being to keep people from listening to them. Trunking makes it difficult...not impossible. If secrecy were that impprtant, they would go to DVP on their existing non-trunked system. It is much cheaper and fool proof. I think that sometimes we scanner enthusiasts over estimate our "importance" in the entire scheme of things.

I am a long time scanner nut AND a police dispatcher since 1982, so I have experience from both ends of the argument.

One very usful page that I have found is Mike Fink's South Florida
Frequency List. The name is kind of a misnomer, however, because it
covers the entire state of Florida, broken down by counties. It also
have great listings of 10-codes, Signal Codes, and other frequencies.

The URL is [http://www.shadow.net/~mikef/]. Give it a try.

NOAA Weather Radio Frequencies

WX1 -- 162.550
WX2 -- 162.400
WX3 -- 162.475
WX4 -- 162.425
WX5 -- 162.450

WX6 -- 162.500
WX7 -- 162.525

Frequencies are in MHz. Modulation is 16KF3E or 16KG3E.

Note that the letter "A" indicates simplex use of an international duplex channel, and that operations are different than international operations on that channel. Some
VHF transceivers are equipped with an "International - U.S." switch for that purpose. "A" channels are generally only used in the United States, and use is normally
not recognized or allowed outside the U.S.

Boaters should normally use channels listed as Non-Commercial. Channel 16 is used for calling other stations or for distress alerting. Channel 13 should be used to contact a ship when there is danger of collision. All ships of length 20m or greater are required to guard VHF channel 13, in addition to VHF channel 16, when operating within U.S. territorial waters. Users may be fined by the FCC for improper use of these channels.

Cordless Phone Frequencies

It is presently ILLEGAL to intentionally monitor or disclose the contents of a Cellular or Cordless Phone Conversation per FCC Law - This listing is for informational purposes only.

Original Cordless Channels

BASE - 046.610 MHz / HANDSET - 049.670 MHz

BASE - 046.630 MHz / HANDSET - 049.845 MHz

BASE - 046.670 MHz / HANDSET - 049.860 MHz

BASE - 046.710 MHz / HANDSET - 049.770 MHz

BASE - 046.730 MHz / HANDSET - 049.875 MHz

BASE - 046.770 MHz / HANDSET - 049.830 MHz

BASE - 046.830 MHz / HANDSET - 049.890 MHz

BASE - 046.870 MHz / HANDSET - 049.930 MHz

BASE - 046.930 MHz / HANDSET - 049.990 MHz

BASE - 046.970 MHz / HANDSET - 046.970 MHz

New Cordless Channels

BASE - 043.720 MHz / HANDSET - 048.760 MHz

BASE - 043.740 MHz / HANDSET - 048.840 MHz

BASE - 043.820 MHz / HANDSET - 048.860 MHz

BASE - 043.840 MHz / HANDSET - 048.920 MHz

BASE - 043.920 MHz / HANDSET - 049.020 MHz

BASE - 043.960 MHz / HANDSET - 049.080 MHz

BASE - 044.120 MHz / HANDSET - 049.100MHz

BASE - 044.160 MHz / HANDSET - 049.160 MHz

BASE - 044.180 MHz / HANDSET - 049.200 MHz

BASE - 044.200 MHz / HANDSET - 049.240 MHz

BASE - 044.320 MHz / HANDSET - 049.280 MHz

BASE - 044.360 MHz / HANDSET - 049.360 MHz

BASE - 044.400 MHz / HANDSET - 049.400 MHz

BASE - 044.460 MHz / HANDSET - 049.460 MHz

BASE - 044.480 MHz / HANDSET - 049.500 MHz

The BASE frequency is all that is needed to hear both sides of the conversation.

You might be better off getting one of the waterproof housings for marine or ham HT's. I have a couple that I use. They are made from heavy guage clear pvc and have an aluminium clamp held together with thumbscrews. Good to about 100'. Perfect for rain and they can be rolled up into a small roll if you don't need it. It also allows the radio to float. Cost, under $25.00.

I've used it when abalone diving and wanted the cell phone handy in the float tube.

reception in the 46-49 Mhz range is impressive. It looks like a cheap
antenna with no reason to work well, but it does. It is not a
transmitting antenna.
>
> Hope this helps!
>
> '73 de Jim N2ZZ

Hi Drew & Jim,

I have the Diamond DJ-130 discone (with the vertical element above the
radials) which is the same as the Icom, but without the "N" connector.
It uses a SO-239 (which mates with a PL-259 VHF connector). Mine is fed
with Cushcraft Ultralink very low loss coax. I also have a 25 year old
commercial 3db gain ground plane cut for 2meters (144-146 MHz) which is
fed with RG58U or A/U (I don't remember). Both antennas are up about 50
feet, separated by about 25 feet.

At low frequencies (6m or 50MHz), the old ground plane outperforms the discone considerably. Some frequencies can't even be heard with the discone (DSC), and are clear with the ground plane (GP). Others are fair on the DSC, and loud on the GP. Occassionally, the REVERSE is true. I'm using a RS PRO-2006 scanner, with the attenuation set at 0db. I would have expected that even though the DSC is not all that great at low frequencies, the GP, cut to resonate at 3 times higher than the low freq's would not perform any better than the DSC, but it's not true. Any one know why?

At UHF (800MHz to 1.3GHz), it's no contest as one would expect. The DSC wins hands down. Signals are not even present on the GP, but at those freq's, you wouldn't expect them.

Would be interested in other opinions.

Alan, de WA6AQC

> frequencies for the Biloxi/Keesler AFB area.

Well, here they come:

Keesler AFB

ATIS 256.0
Tower 120.75 320.1
Ground 121.8 275.8

Gulfport/Biloxi Approach/Departure Control 132.6 387.05 124.6 354.1
127.5 254.25

Good luck listening,

mk.

>> point me in the right direction I would greatly appreciate it. Thanks.
>##########################

New frequencies:
Dock [852.0875 MHz]
Boat 1 [852.8375 MHz]
Boat 2 [851.7875 MHz]

Some of the old frequencies:
[151.04 MHz]
Ch#79 [156.975 MHz]

You have to be fairly close to the ferry to hear anything on the new
frequencies.

British Airways flights to Sweden are always called "Speedboat" by ATC
and themselves. Might be trans-continental flights that are called
"Speedbird". The Speedbird pilots are perhaps considering themselves
as "higher up the ladder" compared to the Speedboat guys.

Cloning an ESN, even your own is prohibited. All cellular phones must
have a UNIQUE ESN. Citing as requested: 47 CFR 22.919 (10/1/95).

And yes - carriers also consider it a theft of service.

From: James Robinton <robinton@avherc.sanders.lockheed.com>
Message-ID: <DuA6Lz.8Ar@mv.mv.com>
Source record: 230094

Michael,

To the best of my knowledge the combination of scanner and GPS will not tell you the Lat/Lon of the transmitter. You can of course come close by knowing the Lat/Lon at which you recieved the signal, thus if you are mobile and combine signal strength you might conclude things. Also with a database like the PERCON cd rom you can find the Lat/Lon of many transmitters and try to make a match with your Lat/Lon and the general coverage areas provided by the frequency in question. To get even more high tech you could DF (direction find the signal) thus eliminating many other transmitters, or with two triangulate...but this is not an ordinary scanner setup.

Since you mentioned Optoelectronics...you might notice their most recent product which is a reciever, which appears to have Lat/Lon gps built in so it can record in it's memory the Lat/Lon at which you received the signal...I also beleive that this receiver is not like a scanner in that you have to be fairly close < 1 mile for the unit to pick out the strengh of this signal above all others, so if you were wondering around at an airshow or something you might pick up local activity, or if you are driving and you hear something it will log where you heard it.

Check back with the Opto page, it looks like a neat unit.

/Jim

If you are able to make sense of all of it, you better be concerned! ;-)

Early in CFR 47, there's a table of services which are administered by the FCC. This table gives a description of each of the services (e.g. amateur, radiolocation, etc) and what part of CFR47 applies to it. I have that table tabbed for easy access.

The fun part is finding contradictions in the code--not too difficult to find!

One way is to simply use your scanner to scan the air band.
118-136 Mhz should be a good start. There are some nav aids
in 108-118, but most of the voice traffic is in 118-136.

A more deterministic way is to obtain all the interesting
frequencies and program them into your scanner. If you
have pilot friend, they'll be able to tell you what they
are. Otherwise, try to buy or borrow some sectional
maps (pilots use them for flying) of an Airport Facilities
Directory. Since both of these publications expire in
short regular intervals, you should be able to find old, but still
useful, editions for next to nothing. Check with a "pilot shop"
at a local airport.

A splitter is fine if you want to use both scanners at once. A switch will allow you to use one at a time... a switch runs about $20 from HRO or a place like that... a splitter can just be made out of Radio Snack's collection of connectors... Whenever you put more coax, switches, spliters, etc. you will have some degree of signal loss.. but probably not enough to make a difference or to choose one method over the other. Of course this will all change if you use a transmitter like you said... Then you have to use a switch ... And I'm not even too keen on using multiple radios with one antenna... It something goes in the switch, you can destroy a radio while using the other. I hope this helps..

I have mine in the attic.
I live in a area with the houses are
small and very close together.
A few years ago I had the discone
on a mast attached to the fireplace.
About 20ft. above ground.
Even cell phones were overlapping.
In the attic nobody knows it there.
I have heard cordless phones over
a half mile away.

Radio Shack usually has this. That is where I picked up mine a couple of
years ago. It is updated yearly. Also check with Grove Enterprises
(1-800-438-8155) or http://www.grove.net. They usually carry a copy.

Source record: 230127

seeya@xnet.com wrote:
: Can anyone provide frequencies for the CB channels??
: I am specifically looking for channels 9 and 19.

Begin at channel 1 - 26.965 MHz. Channels are every 10 kHz
up from there through 27.225 (channel 22) EXCEPT FOR
frequencies ending in .x45 and .x95. Channel 23 is 27.255.
Channels 24 and 25 are stuffed between 22 and 23, at 27.235
and 27.245, respectively. Channels 26-40 are 27.265-27.405.

The .x45 and .x95 channels in the original 22 channels are
for radio control. Channel 24 is what was called 22A before
the 40-channel rigs came out (1977).

Specifics - 27.065 for channel 9; 27.185 for channel 19.

Remember, these are AM (or SSB) -- if you're using a scanner,
you'll not hear much of anything useful.

Hope this helps...

>Sean, N2ZJJ

Companders are used on virtually all wireless transponders to conserve
bandwith, but this is not what prevents them from being monitored.
Most of the cordless phones that claim to be secure use a technique
called inversion. the high and low frequencies of the audio are
transposed for the RF part of the trip, then reinverted. This is
fairly cheap to implement (one IC basically), but also therefore
fairly cheap for anyone with moderate electronics ability to build a
"descrambler" for.

Unless you have a fully digital system (VERY expensive), you are never
fully secure.

I know I have seen it here before, and I apologize for asking again, but what is the IF for the BC200XLT? Also, are there any mods other than restoring the cellular? I'm more interested in listening to 200 mHz, but I realize that if it was never installed, it cannot be "restored." I also seem to remember once a long time ago, a mod to make it receive in AM mode. Does anyone know of any such mod? (Is there a FAQ file with all of these answers? If so, how do I access it?) Thanks....

Does audio compression distort what you hear with the scanner?
I think this is what companders do.
How about the digital system att uses on their 900Mhz phones.

Being a scanner owner I want a cordless phone that will take a lot
of effort to hear.

You should be able to hear virtually anything you want, given an
appropriate scanner or SW reciever, antenna, and PATIENCE.
Surprisingly little of the military coms are scrambled, and you'll
also be able to get psuedo-military hits like Coast Gaurd and DEA in
your area, although much of the DEA is digital transmissions. Pick up
a copy of Monitoring Times magazine (monthly). they do a good job of
showing where to listen, and what to listen for.

It's unclear what your application is, but the most common "rule of
thumb" formula is ;
Antenna Length (feet) = Frequency (MHz) / 234

You can combine desired frequencies by looking at multiples
(harmonics). 50MHz, 150MHz, and 450MHz can all be recieved
(reasonably) well with one antenna at the 150MHz length.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

The WIND UNIT board contains the "window detector" circuit.
The radio's discriminator output is fed to the inputs of two
operational amplifiers, where they are
compared with a reference voltage to determine if
the BC760XLT is tuned "close enough" to the center of a signal.

The output is used basically as a "go" or "no go" signal.

Used in search mode, the window detector output is interrogated
when a signal is detected so the scanner "knows" whether to
pause the search. This ensures the scanner is on (or near) the
center of a signal instead of off to one side.

On UHF, the BC760XLT broadens the window to be slightly more
tolerant of off-frequency signals.

Window detector circuits are found in most modern scanners.
The Regency M100/M400 and earlier K500 Touch are not as refined.

WHOOPS.... Lets try that formula again;

Antenna Length = 234 / Frequency

This is for a quarter wave antenna, by the way.

To all of you who were losing their memory with the PRO-2036, I just received my unit back. Radio Shack replaced the lithium battery. Since I bought this unit less than a week before taking it back for repair (probably a new record!), I can only assume that the battery was defective.

Tell that to people that are in radio congested areas and depend on
CTCSS/PL tones. What can you modify a 2006 to do that a Bearcat can't?

Cell phones: Pointless after a while, but Bearcats get them on images.
Speed: Even with the speed increase on 2006, Bearcat is still faster.
Shortwave conversion: Give me a break, get a real HF/SWL radio

There isn't anything you can do to the 2006 that is either worth the
bother or can't be done (or comes stock) on the Bearcat 8500XLT.

>cgood@worldnet.att.net

As suggested, something 900MHz may be the way to go... but beware, they aren't all legit... I took a friend's Uniden 900MHz that was supposedly "scrambled" and sat there and listened to it clear as day on a simply Radio Shack PRO-51 scanner. If you don't want to spend big bucks for 900MHz.. the Motorola cordless flip phones aren't bad.... they aren't worth listening to.. the audio is pretty much unreadable and sounds like sideband on the AM side if you're familiar with that.

Hi--

Can anyone provide frequencies for the CB channels??
I am specifically looking for channels 9 and 19. The others
would be great, too. I'm hoping there's some simple formula
(Channel 1 starts at x Mhz and every channel goes up xx hz,
or something like that)

Thanks in advance for any help--

Seeya,

Mike

2478. Scanner+GPS give latitude/longitude of received signal??

Newsgroup: rec.radio.scanner
Date: 1996-07-09 00:00:00 UTC
From: seeya@xnet.com
Message-ID: <4rsk8e$k7b@flood.xnet.com>
Source record: 230226

Hello, all--

While perusing the Optoelectronics catalog I saw the Optolinx (Radio and PC interface) and in the description (also available at www.optoelectronics.com) it states:

'GPS Interface: The OPTOLINX can interface with an NMEA 0183 compatible GPS or LORAN receiver. Use the OPTOLINX, GPS, and any OPTOLINX compatible receiver (I am anxiously awaiting delivery of my AR8000) to obtain Latitude and Longitude coordinates for any signal the receiver acquires. Future software by Software Design Companies will allow real-time position mapping'

Thanks for sticking with me so far--am I to infer from this that with ONE GPS unit, the scanner and the interface, I can find out the lat/long. of the transmitter??

This sounds pretty hard to believe--Does anyone KNOW if this is possible??
If so, how the heck do they do that??

Any information/speculation on this topic would be appreciated--

Thanks,

Mike

Source record: 230230

Hi, I'm interested in buying a scanner. I'm interested in ones of the hand-held variety. The cellular frequencies would be very cool, but they're not essential. And I don't have the technical know-how to modify anything myself. That's one of the reasons I'm looking for a used scanner. The other reason is that, well, I dont have a lot of money. Any info on various scanner models would be wonderful, as well as what could be considered a reasonable price for a used model. My budget (for a used one) is most likely about $140 tops, and preferably lower than that (hey, i've gotta go to college too!) Possible places that I'd be buying this are either through this newsgroup or a pawn shop (and yes, I trust the newsgroup much more!)

Please respond via private e-mail if at all possible

Thanks
Have not seen the Motorola for sale locally.

I tryed the new Toshiba 900Mhz with call protect.
It is a digital scrambling system. My scanner never locked onto the
siginal.But the battery went dead three times in one week.
Reading the manual it said 4hrs talk time. Much less than my old 49Mhz
phone.
So I took it back.

Absolutely! At VHF/UHF antenna height is everything. You could try
side-mounting the discone on the tower using PVC tubing/elbows, etc. so
the skirt of the discone doesn't touch the tower.

Good luck,

I'm sure this is a simple question. But..

Can someone point me to a web page, etc. (or simply supply this info).

What are the standard signal mode and default step sizes (KHZ) on the major frequencies from 25 to 1300 (i.e., a standard scanner) for use in the US.

I've found numerous lists of frequencies, spectrum band, etc. but nothing seems to list for example: 400.000 - 511.9875 NFM 12.5.

I've looked through Police Call Plus as well and can't seem to find this info. Any help would be appreciated.

Regardless of whether legal or illegal...(and to send this thread)

Search in Altavista.digital.com for a program called pd100.exe or .zip. It is PC based and takes the input from the discriminator to RS232. It comes with a scematic. It is a limited use version (I think it only works for 5 minutes or so). I haven't used it myself, but the program looks pretty good...

If you still can't find it...e-mail me and I will find you a copy.

I've had my fun with this tiny handheld communications receiver/scanner.
So now it's time for me to offer it to someone else to enjoy.

No scratches, dents, or scrapes; shows very little sign of wear.
Set comes complete with all of its original accessories.

First $250-plus-shipping takes it. Please e-mail: 2wsk000@gc.maricopa.edu

Thank you.

Resently I started hearing local patrol units requesting other units to "change over to VA".

What is this "VA" and what or where is the frequency(s)?

Shane

According to the July/1996 Issue of Popular communications, much of the communications at the 96 Olympics will be on digital trunked systems. Motorola will be repsonsible for the design, installation, maintenance of the digital 2 way radio communications network. "It includes sophisticated, two-way radio systems utilizing Motorola's ASTRO and iDEN digital technologies. Reportedly more than 10,000 portable and mobile radios, 6,000 pagers, 1500 cellular phones; 1500 computer modems; and secure two-way communications equipment will be supposrting the games..."

I wish you luck in listening to anything interesting.

Guess I scared myself listening to what some people say on cordless.
A thief can get your charge card number or clean out your house when
you tell a friend your going out of town. I may forget to get on
corded phone.
The average joe will not go to the trouble of building or buying a
descrambler.
I just bought a Motorola 2025 with secure clear.
It's hte next step up from the 200. It's on sale at office depot for
$74.99 reg. $119.99
It's not a 900Mhz phone so the battery should last.
As a scanner hobbiest I don't want to hear the distorted audio it
makes.
I saw the Vtech 9000 and it looks just like the toshiba I took back.

You wonder how people who seem to be so concerned with the privacy of their conversations still USE a cordless.

Makes you wonder what you are talking about. Is it, perhaps, not so legal endeavors?

If it is that private - I use the good ol fashioned thing here ON the desk. If the gub'ment is going to listen, they sure aren't going to sit outside my house with a scanner anyway - good old wire-tap for them.

If I don't care - which is 99% of the time, it's the good old AT&T 49mhz for me! Besides, it gives the neighbors something to do. I mean, someone has to provide the entertainment, right? And if the neighbors have been real nice, then I will let them hear a LITTLE bit of a real juicy tidbit, before I say, "oops, forgot, let me switch phones here..."

I read in the PGP program's documentation that the US government gave its developers a hard time. I think NSA and other spook agencies are very bothered by secure communications for the public. It makes their job much more difficult.

2520. Re: 96 Olympics

Newsgroup: rec.radio.scanner
Date: 1996-07-10 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <4rviha$rt3@HOPPER.ACM.ORG>
Source record: 230144

Jason Shoaf <jshoaf@daystar.com> asked:
> ... any scanner traffic the Olympic people might use.

They're just beginning to make use of the various radio systems, but so far I've found:

935.4000 .4125 .4250 .4375 }
936.4000 .4250 } general purpose Olympic trunk
939.4250 .8875 }

938.3875 .4000 .4125 .4250 .4375 ACOG VIP transportation (5-ch trunk)

939.9750 satellite video techs, 'Ch 4'

937.6375 .6500 Coca Cola Olympic City

The general purpose trunk should have additional frequencies in the industrial allocation, i.e. 935-939 MHz at: .3875 .4000 .4125 .4250 .4375 .8875 .9000 .9125 .9250 and .9375. The primary base station was refered to as "VCC", which just might be 'Venue Communications Control'. I've heard security, logistics, and (for the moment) a lot of techs hooking up video lines. The international broadcasters are using the trunk, so I now know what "test...test...test" sounds like in Chinese.
One tech said "... let's switch to the other radio and check out 800", so there are also assignments in the 800 MHz band. Prior to the activation of the Olympic trunk, there were ACOG administrators on two GMRS trunks (935.5125-.6250 and 936.7625-.8750), but they were buried in the usual melange of plumbers and package delivery services.

Source record: 230146

Hi -- I'm a complete neophyte when it comes to scanners, are the mid-level RadioShack (Pro-50 ?) decent? Should I be looking at Uniden or some other brand?

I notice only the top-end scanners have more or less complete spectrum coverage, with even the mid level ones having fairly large gaps (esp in the 200-400 Mhz) range, etc. Do people find this a problem?

Finally, how do these scanners get modified to reenable cellular pickup? Is it just a "software" mod, since the scanner itself can pickup in the 800Mhz region?

Thanks in advance!

Been there done that! Plug - N - Play BABY! No tools required!

Thank You!

Richard E. Bovee

Hello and thanks for reading this message.

I have for sale a Uniden BC200XLT. I purchased this radio new and did the cellular restoration. Other than that there has been nothing done to it. There is an extra battery and leather carrying case along with the plug in charger. This radio has had very little use and is in excellent condition.

Price is $175.00 firm shipped.

Thanks again,

RE Bovee

Please excuse if the following post actually made it on
my first attempt. Like I said before, my ISP (EPIX.NET)
usually only seems able to handle 50% or less of the
articles so I have re-posted this just in case.
Thanks
bill

I spent the Fourth of July week-end in Philly so I now have some
radio related questions.

1. On top of the Franklin Institute there is one (very) large
beam (Yagi?) antenna and at least one long wire. Does anyone
know what they are used for? Possibly a Ham Radio Club?

2. Are there any marine frequencies that are particulary
busy in the Philly area? I notices quite a bit of river
traffic including the Coast Guard and a boat labled something
like "Marine Patrol" (guys in brown uniforms).

3. Does any know if and what the "Moran" (tug boats) *company*
frequency is or if infact they have one dedicated for their
own use?

4. I had several frequencies programmed from the old "Monitor
America" book. The "Central/453.150 and "South/453.650" freqs
seemed to be just that. I also had "Traffic/453.250" (seemed
to be mainly traffic - but - "Detectives/453.400, Emergency/
453.550, Command/453.600 and Adminstration/453.750" most of
the time *all* seemed to have the same info/traffic on them.
Are they really suppose to be broken up this way or is their
actual use something different than is listed in the book?

BY-THE-WAY My provider (EPIX) consistantly receives (or looses)
about fifty percent of the Usenet traffic so if possible I
would also appreciate any email replies.

Thank you for any and all help
bill

: coverage, with even the mid level ones having fairly large gaps (esp in
: the 200-400 Mhz) range, etc. Do people find this a problem?

: Finally, how do these scanners get modified to reenable cellular pickup?
: Is it just a "software" mod, since the scanner itself can pickup in the
: 800Mhz region?

: Thanks in advance!

I have a realistic 400 channel scanner.
It covers 25-520 and 760-1300 Mhz. Here in the uk, the 520-760Mhz gap
is in the middle of the television band, so the only problam is that
I just have trouble getting all of the TV channels. No big deal.
The functions are pretty basic eg. AM NFM and WFM, with no sideband
and no variable bandwidth, also no way of fine tuning the frequencies.
This can cause problems listening to the CB radio band. In the UK
CB radio used FM mod. and the NFM on my Realistic is a bit to wide
and tends to get crosschannel interferance.
On the good side it has a good sensitive receiver,
I think it is pretty good for a mid level scanner.

Richard.

There are several possibilities that come to mind:

1) The four freqs you've found are the most commonly used ones.
Channel 7 may get used so rarely that it's difficult to find with a
frequency search.

2) Often the police use frequencies assigned to the city for
non-police transmissions in the evening and at night. (They might use a
street department freq as an occasional, or special operations, channel
because the street department goes home at 5pm, right when the police
radio traffic is picking up.)

In the books look for frequencies with the radio codes GA, GF, GP, PF,
PH, PL, PM, OP, PP, PS, QM, YA, YF and YP in your area.

3) It could be that they really are using some out of band or low power
frequencies.

This page will give you all the radio frequencies for the airports in your area: http://www.cc.gatech.edu/db1/fly/airport-info.html . This includes arrival, departure, tower, ground control, etc.

Most of the communications will be on these freqs. The non-military distress frequency is 121.5. There is also a general plane to plane "CB" frequency, but I don't remember what it is.

The major carriers also have their own frequencies for plane to plane and plane to ground. These are outside of the air band, ususally in the 450 MHz range, and are more to do with schedules, supplies, and maintenance than flying.

As you listen to the departure frequencies you can write down the regional air traffic control frequencies as they are given to the planes ("TWA271 contact Kansas City Center on 126.985"). You may not be able to hear the controller, but you'll pick up any planes in your area that are transmitting on those freqs.

Source record: 230158

Hi all,

I have found a Uniden Bearcat scanner 760XLT for 249.00. This unit has full 12-band coverage including 800mhz frequencies. Is this a good price ?? It also has 100 programmable channels and automatically searches for fire etc..

I have seen some posts about having to modify you scanner to get the 800 MHZ frequencies. I would assume I would not have to do that with this unit. Please reply to me or the group.

Thanks!!

2536. Re: 2 antennas on the same cable ?

Newsgroup: rec.radio.scanner
Date: 1996-07-10 00:00:00 UTC
From: 73573.1504@compuserve.com
Message-ID: <4s0l21$fc5@nntpa.cb.lucent.com>
Source record: 230160

It is possible, but maye not very practical. The signals from the 2 antennas could be easily combined, but depending on the relative phasing of the signals one would get either constructive or destructive interference, meaning that the signals could either reinforce each other or cancel each other. The phasing would depend on the spacing of the 2 antennas, the length of the feedlines, and the frequency of the signal in question. Of course, if the 2 antennas are picking up different signals or the signal strenghts from the 2 antennas are very different then this problem would be avoided.

The other problem is that the combining process is never lossless so the signal strength from both antennas will be somewhat degraded.

Some commercial communications systems do something similiar to what you suggest (it is called diversity reception). The way it is normally done is to have 2 antennas feeding 2 different reciever front ends. The output of the receivers is constantly being sampled and the one that has the best signal is used.

I wouldn't say that Bearcats "suck." If they "sucked" they wouldn't sell so many of them.

I am a RS fanatic, but I realize that Uniden makes great scanners, too. In fact, some RS scanners are made by Uniden. (Not the Pro-200X series.) I am not intimately familiar with many Unidens, with the exception of the BC9000. We have one at work and it is great.

To say that there is nothing RS scanners can do that a BC cannot is incorrect. How about computer interfacing? Luckily for Pro-200X owners, GRE (the manufacturer) decided to have more discrete components instead of one great big honker IC that has all the functions in it. With the discrete components you can dive in between and tap into circuitry that is untouchable on the Unidens. There is more than computer interfacing, too.

Things like signal strength meters can be added to RS radios, and I have not heard of that being so with Uniden units.

Last, the Pro-200X series in a tried and true batch of radios that have been ridden hard, put away wet, and come back for more. (Not saying the Unidens are slouches...just that the RS Pro-200X units have been around for over 10 years with fantastic track records.)

Bottom line, if you want to hack and/or have computer control, get a RS unit. If that is not your intent, get the one with the best reviews, the best price, and the features you need.

I am not nearly as familiar with Radio Shack's newer Pro-2035 and Pro-2042 units. Can't tell you much about them other than they are made by GRE just like the 2006 was.

Andy

Being in the business, I know that sometimes departments will give channel numbers to things like "Call me on the cell phone." In some cities, that may also mean channel 7 (or whatever channel they use) on the CB radio. Some officers in Kansas City MO and Kansas City KS used to/still do use CB radios on an unofficial basis.

Andy

Another thing to look for is talk-around on repeater channels. That means that the units can switch to the repeater frequency and have low power car to car traffic and still hear dispatch.

2544. Charolette N.C. Trunked System Questions

I will be making a trip to the Charolette NC area in the next few months. I understand that the Charlotte-Mecklingburg public service agencies (police, fire, ems) went to a trunked radio system. I believe I read that it is Motorola and analog. I have a few questions:

How many systems are in use. In other words, are there more than one data channel used at the same time?

What are the frequencies used in the sytem(s)?

How often does the data channel change frequency?

What services other than police, fire, ems uses the trunked system?

Does anyone have a talkgroup listing for the system? I know this one is pie-in-the-sky.

What is the unit numbering for the Police department?

Thanks and any information will be appreciated.

Joe Cardani

One possiblity is they are using a state-wide car-to-car frequency
as Channel 7. In my area most locals have access to a county-wide
frequency (to contact other locals and the sheriff) and a state-wide
frequency (to contact state units and provide additional car-to-car).

On the ohter hand that channel could be just bypassing the repeater,
transmitting on the repeater out frequency. My old hometown PD used to
do that. You would have to be fairly close (maybe line of sight) to
pick them up.

Hope it helps,

George

I use an Escort which produces a VERY irritating buzz when a scanner hits it.
It's supposed to be digital spread spectrum and to tell the truth, I was
surprised that the scanner found it at all. Then again, I'm not a electronics
tech so I can't say for sure what I'm supposed to hear or not hear.

Hi! I have a chance to pick up a Bearcat BC101 for $50. I'm looking for a unit which will cover the FM Ham bands for casual scanning (i.e., 29 MHz, 54 MHz, 144 MHz, 220 MHz, & 440 MHz). Does this unit have decent sensitivity across the whole 29-512 MHz spectrum, or will I be disappointed? I have an Icom IC2SRA which claims 29-900 MHz coverage, but it really has no ears below the FM broadcast band.

I could also obtain a BC100XLT for $70. Would this radio be worth the extra $20 investment?

To be perfectly honest it wouldn't surprise me if there was some kind
of behind-the-scenes manoeuvering on the government's behalf against
the cellular industry.

This is the same government who was up in arms against the maker of PGP
encryption because it was SO good at maintaining privacy.

Seeking info on where to tap off logic levels from the innards of these scanners to do things like:

- determine scanner has stopped on some freq

- determine which bank, channel

- determine freq

Basically, looking for info for computer recording and ultimately controlling scanner activity. The kind of stuff the Opto and others utilize for same purpose. Looking to build low cost, simple interface.

Will merge, organize and re-post all info received. Thanks and regards,

Steve

Source record: 230181

Your Real Name <userID@hamilton.edu> asked:
> if these fcc master lists they compile the guides from are accurate,
> why are there missing freqs?

Any number of reasons -

The FCC maintains records of active licenses. Many public service agencies fail to renew their licenses or continue to use a channel long after the license has expired.
The FCC files are created by human beings, who sometimes make misteaks. If a Special Emergency (code PS) license is entered as IS (Special Industrial), it will never show up in a list of Public Safety frequencies. I found the City of Atlanta spelled seven different ways.
Many localities license an agency under the wrong service. You'll often find the Sheriff's department using a frequency licensed as local government. When one agency moves to a new band, the old equipment (and freq.) is inherited by a sister agency in spite of license restrictions.
Channel numbers may not correspond to licensed frequencies. While the patrol car's radio may have Ch 1 and 2 as departmental freqs, Ch 3 may be the neighboring county's sheriff and Ch 4 the statewide intersystem, neither of which is directly licensed to the locality. Heck, Ch 5 could be set up as 162.55 so they can get weather reports.
The same frequency may be designated by more than one channel number. In particular, it is common for police to transmit on the repeater output so as to be heard by units in the immediate vicinity but not repeated area-wide (called 'talk-around'). In this case Ch 1 might be the normal repeater usage and Ch 3 the talk-around channel.

The ultimate explanation for unlisted frequencies lies in the FCC's regulations for the Police Radio Service. Section 90.19(g)(3) states "A licensee may use, without special authorization from the Commission, any mobile service frequency between 40 and 952 MHz, listed in subpart B of this part of the rules, for communications in connection with physical surveillance, stakeouts, raids, and other such activities."

If scanning consisted simply of punching in a set of frequencies from a list, there would be no need for this newsgroup. Consider Police Call simply a starting point, and go hunting.

>>of effort to hear.

Any of the 900 MHz spread spectrum phones will take quite a bit of effort to monitor. QUITE a bit of effort! While converting the digital baseband signal back to analog might not be difficult for the above average radio nerd, getting the hardware that will "un-spread" the signal (and the PN or "spreading" codes for the particular phone you are monitoring) is more effort than the average voyeur or credit card number thief is probabaly willing spend.

>I use an Escort which produces a VERY irritating buzz when a scanner hits it.
>It's supposed to be digital spread spectrum and to tell the truth, I was
>surprised that the scanner found it at all. Then again, I'm not a electronics
>tech so I can't say for sure what I'm supposed to hear or not hear.

The Escorts (Couriers) are direct sequence phones that transmit a "spread signal" more than 5 MHz wide. When in close proximity to a regular 900 MHZ nFM receiver you can hear some noise. If you have ever seen one these phones on a spectrum analyzer, you can see why it can happen - even though the signal is very wide. Put some distance between the phone and the scanner and the buzzing will drop dramatically.

Any scanner that doesn't use crystals is digital. The analog is only
in the reciever section, which is essential given that that is the
mode of transmission. Maybe you had something more specific in mind?

Source record: 230191

I have a PRO-50 that sends out an occasional "moan"through the speaker. This usually happens when there is a UHF signal present. It is not the transmitting station, because it happens on several different freqs. I don't seem to notice this when it's on AC power only DC. It is not the batteries, because I changed them.

Thanks

HI Charlie (and All)

I do a low cost interface for the AR8000 and AR2700. Available as a
Kit or ready built. (both versions include the special Flat Ribbon
Cable (FFC) - I have emailed you details.

Watch out for "Channel Commander" V2.00 control software, {data base
now allows for 10,000 channels!}, release date Aug/Sept... I have also
emailed you details

If any one else wants info, please email for details (I shall be away
until Wednesday - so will respond to email then - thanks)

BTW: If you have another radio that takes a computer control input,
The interface I produce will more than likely work with that as well.
The interface is a standard RS232 voltage level translator converting
TTL logic voltages (from radio) to RS232 votlages (from computer.) It
is a matter of just sorting out the pinout connections on that radio
and having the correct s/w to drive it....

Message-ID: <837112839.17897.3@cisas91.demon.co.uk>
Source record: 230002

Greetings to you all from Sunny Somerset, England!
(I lied 'cos the sun ain't shining!)

To the point:-

Reference to alt.radio.scanner
rec.radio.scanner.

I am sure that most of us who subscribe to one of the above groups
also subscribe to the other one as well.

Daily, I see a posting from subscribers echoed in both groups. Replies
and comments are echoed to both groups. Indeed I have answered the
same question asked in both groups.....

It seems do be duplicating the work and efforts of EVERY ONE
concerned, downloading duplicated postings, and then having to answer
them twice - (3 times if you include alt.radio.scanner.uk as well!)
Increases the costs for us poor scanneroos who have a dial-up account
and have to pay the phone bill for time used!

Q1) Is there a need (or valid reason) to have the two groups
separately?

Q2) Is it possible to amalgamate the two groups??

If the answer is No & Yes respectively, then:-

Q3) How do we go about amalgamation?

Q4) Who actually does it?

Any one else got thoughts on the subject? Can it be done? Do we ALL
want it done?

Some service providers may not give subscribers access to both groups
- come to that, I only know of the 3 scanner groups that I have
mentioned - are there any others that I should also look at?

(This posting IS cross posted to the 3 groups mentioned above, but for
the sake of sanity (who's?) & bandwidth & phone bills, I suggest
comments only to alt.radio.scanner.)

Regards and happy scanning to you all...

Donald Gray

Also worth noting is that the 'sequence breaks' have historically been very popular with DX'ers looking for quiet slots. For example, 27.145 is popular for European SSB traffic. That also used to be the case with 27.245 before it became Ch. 25.

Tim:

Unless the scanner has been subject to extreem vibration or shock, it should not require any alignment in it's lifetime.

Greetings Donald from Toronto Canada where it IS sunny today!

>Q1) Is there a need (or valid reason) to have the two groups
>separately?

None whatsoever! As you point out it wastes a lot of bandwidth and
wastes whatever possible logical split there might be!

>Q2) Is it possible to amalgamate the two groups??

Yes, if you go through the proper process.

>If the answer is No & Yes respectively, then:-

>Q3) How do we go about amalgamation?

You post a request for discussion in the proper place. This leads to a
vote by the readers of the group. Depending on the results of the
vote, it does or doesn't happen. The Usenet powers-that-be issue an
announcement, and the ISP's change their settings accordingly.

>Q4) Who actually does it?

Well, if we want it done, we have to do it.
Someone with a good knowledge of the rules of Usenet has to start
things off. I'm afraid I'm not that knowledgeable, but someone here
will be.
>----------------------------

>Any one else got thoughts on the subject? Can it be done? Do we ALL
>want it done?

My suggestion would be two groups: alt/rec(I don't know
which).radio.scanner.freqs, for exchanging frequencies only, and
alt/rec.radio.scanner.tech, for discussing equipment, mods, antennas,
and all that stuff.

Let's go for it!
Paul

>Please do not short the output or severe damage will be caused to the fuse.

2589. Speed up mod experiences w/pro39?

Newsgroup: rec.radio.scanner
Date: 1996-07-11 00:00:00 UTC
From: Tim Andersen <tim@axon.cs.byu.edu>
Message-ID: <31E58112.126A@axon.cs.byu.edu>
Source record: 230013

I have a pro51 and a pro39. I like the pro39 but am somewhat
spoiled by the extra scan/search speed of the pro51. In
relation to this I was wondering:

Has anyone done/had done the speedup mod for the pro39?
Did it have any detrimental effects on scanner performance?
Was it worth it? Can you double the speed safely or is it
better to increase it by say 50% or so?

Thanks!

Source record: 230015

copied from UUCP:
>From: David M. Bruce)
Newsgroups: rec.ham-radio
Subject:
Bearcat 200XLT Mod
Organization: The Internet

To modify the 200XLT for recieve
of cellular service:

1. Remove antenna and battery.
2. Remove two Phillips
screws from back, two more from
bottom (battery retaining
spring screws, and the spring
itself.
3. Pry rear cover off from bottom
and remove.
4. Revove two small screws from base of circuit board.
5. Pull
front panel from mainframe at base and separate.
6. Find IC labelled UNIDEN
UC-1447 and 10k ohm resistor
(brown-black-orange) above it.
7
Cut 10k resistor in two with small wire cutters. Or cut one of the leads.
8.
Reassemble, make sure dual-inline connector at bottom of
board lines up
correctly with socket. Gently tighten
bottom screws.
9. Replace battery
retaining spring (slotted side toward
notched hole), ins
ert screws and tighten them securely.
10. Replace battery and antenna.

This
should allow entering of cellular freqs. Given to me by
friend who said it
works, but no warranty from me.

(Proceed at your own risk. WA2ISE)

>>1. Would RS's low price ground plane (around $20.00) work well for this?

2. Should I cut the antenna for the middle of the 118-137 band? <<

You're idea should work fine. I use two antennas for my scanning -- a Channel Master Monitenna for general freqs and the cheapo RS ground plane cut for the middle of Mil Air frequencies (225-400). It works great. I regularly pick up Mil air traffic over 200 miles away. Hope this helps.

Radio Shack PRO-2035 or the newer model.
OS-535 kit (computer control system).

Antenna(s) depend on how much $$ is left after the above, and what sort of RF environment you live in. If you don't have pager & broadcast stations within a few miles, I'd suggest the Dressler ara-??? active antenna. Otherwise, make-do with a good discone.

Coax: Belden 9913.

Future investments would involve specialized antenna systems optimized for certain freq ranges & polarizations, & a log-periodic.

Tim

P.S. You didn't specify, but I assume you wanted a base setup...

It's "Gateway Electronics" on Page just east of North and South Road. They
have the best selection in St.Louis of scanner books and magazines.

2605. Trade ADMS software for Scancat Gold

Newsgroup: rec.radio.scanner
Date: 1996-07-11 00:00:00 UTC
From: wa2sqq@venus.hili.com
Message-ID: <4s1ljp$ok8@news.ios.com>
Source record: 230058

I just purchased an AR8000 and I'm in need of a copy of Scancat Gold to unlock certain portions of the radio. I'm willing to trade a copy of the ADMS software used to program the FT-21/51. Obviously I plan to purchase Scancat Gold in the future so that I can get the documentation and future upgrades.

Anyone interested?

2606. Re: Uniden Bearcat 760 XLT for 249.00 Good buy ??

Newsgroup: rec.radio.scanner
Date: 1996-07-11 00:00:00 UTC

Source record: 230059

It depends where you're located...here in Chicago, if you're relatively patient, and keep a reasonably close eye out, you could get that radio for considerably less. BTW, I just bought one from a local guy and am very pleased, especially for mobile. I'm a very avid listener, but mobile, I'm just not interested in more than 100 channels.

Best Regards,

Paul F. Murphy

@worldnet. wrote:

>Guess I scared myself listening to what some people say on cordless.
>A thief can get your charge card number or clean out your house when
>you tell a friend your going out of town. I may forget to get on
>corded phone.

typically I am talking while I am on the internet (like now) so I just
use the closest thing, which is the corded phone

Most of the breakins occur at the top of the street near the
intersection, down here in the cul de sac, we don't get broken into.

besides, most thieves are not going to listen to your conversations,
they are going to look for lack of activity, lights, excess mail,
uncut yard, etc.....

your NEIGHBORS on the other hand, might do that....just make sure you
talk about very violent things on the cordless, and mention words like
"buckshot" and "cap the @#$$@#" and "just make sure you kill him when
you shoot him, that way he can't testify".

"Voice Activated" maybe? They may have a separate channel or
frequency where the transmissions are voice activated, ie they don't
have to manually key a microphone in order to transmit. That would be
my guess....

Jim

Exactly.

United Express calls themself "Blue Ridge" when operated by
Atlantic Coast Airways.

United Express also operates (in full colours and titles) for
Air Wisconsin as "Wisconsin" Great Lakes Air as "Lakes Air" and
Mesa Air as "Mesa" as someone also noted.

>->->Regards

>->->Peter

Peter, it is very possible to have multiple receive antennas on the same coax
and what you're thinkng about will work fairly well however just remember that
the discone antenna, being omni-directional, may allow a strong local signal to
over-ride a weaker signal that you're trying to pull in with the beam.
The optimum would be to have 2 feeds with a switch at the scanner then your
directional capabilities with the beam would have much more gain.

I use several antennas on the same coax but mine are of different wavelengths
for optimum gain on each of the bands.

Hope this helps.

Shaggy

2624. Antenna for aircraft band

Newsgroup: rec.radio.scanner
Date: 1996-07-11 00:00:00 UTC
From: Scott Ryan <crtoy@fyiowa.infi.net>
Message-ID: <4s2ree$7qb@nw101.infi.net>
Source record: 230077

I'm going to install a dedicated antenna for aircraft communications, which will mainly be hooked to my Drake SW8. I already have a discone in the attic that is connected to my base scanner. Antenna must be fairly descreet looking.

I have two questions;

1. Would RS's low price ground plane (around $20.00) work well for this?

2. Should I cut the antenna for the middle of the 118-137 band?

2625. PRO-43 For Sale

:>vehicles? I know they are more expensive, but what I am really
:>looking for is one with a programmable display, which shows a title of
:>the freq you are listening to (ie "KC Fire Dispatch" or "Bayside
:>Police 1"). Please tell me the approximate price.

Wow if you find one with alpha tagging please let me know.

The one I bought (doesn't have alpha tagging) but works great is the Icom R-100. The downside to it is it takes 3 antenna inputs. This would be for band rejection, and frequency ressonat. It has it's on Pre-amp and attenuator. It works very nice it rejects better than my mobile transciever.

For the past couple of months I have listened to the superlink working. I have to compliment everyone who has worked to set this up. During the last month of so, whenever threatening weather has popped up, I find that I am tuning my scanner to the superlink freq to find out what is happening and to get the very latest in weather info. What a network the state's hams have set up. I was always familiar with the weather watching hams but am really impressed with the statewide organization that happens on a moments notice. Last night (Wed 7/10) as threatening weather approached my area (Minot), I turned on the scanner just in time to hear someone bring up the link and ask for info on what things looked like here. Immediatly I heard 3 or more hams respond and set themselves up to observe the weather patterns and report what was happening. This was very impressive to me!!! My compliments to Bill, WB8BZH and others (I am sorry that I cannot name them but I was not writing down names, etc of those that came up) that quickly responded.

h2obug@communique.net wrote:
: I am the proud owner of a spanking new discone antenna from R.S. Is
: RG6 coax good enough for this type of antenna (25ft run)? The salesman
: suggested rg8, but it seemed a little thick for what I am using it
: for. What are others using?

: Vince

Coaxial cable comes in different "Impedances" measured in ohms. For
the best possable results you should find out the impedance of the
antenna socket on your scanner, and use coax of this impedance. My
scanner is 50ohm I think this is pritty standard with scanners. I
use RG58 coax as it is 50 ohm and is a convinient thickness to work
with.
Using the wrong impedance however is no desaster. Eg. I have somtimes
connect my scanner to my TV arial, connecting the 50ohm coax directly
to the 750hm Tv cable, Worked fine.

Basicaly for the best possable result use the correct impedance, use
the thickest cable possable, and the shortest possable length of coax.
But in reality it is not usually worth the hastle, it doesn't make much
difference, unless you are useing a very long cable.

Hope this helps.

Richard.

Does your SWL or scanner lock up when your computer is on?

Me too,I have found an OLD idea that works 100%!!

Use FOIL PAPER..Shiny side down and cover your scanner,be sure to make room for the controls on the scanner.

I had the RF problem,and was STUMPED! till I had remember the foil paper trick.....WORKS like a charm.

Even wrapped up my SWL !! Again this worked 100 %!!

I can now scan the cordless phone freqs with NO LOCK UPS due to the computer is on.

- Roger

I think that for many, it's more a matter of principle. They don't like
the fact they are paying for a radio which intentionally blocks out
certain bands which it is designed to receive. And also, everyone is
different. Some people find that listening to other people's phone
calls is fascinating, some would rather sit and watch grass die.

I believe the reason is that when r.r.s was started with the intention of replacing a.r.s, many sites that received the alt. groups did not receive the rec. groups, and vice-versa. Therefore, crossposting to both groups became the norm to allow users of both groups to read posts.

After a while, r.r.s users began to ignore a.r.s, assuming that everyone had rec., and that it was time for a.r.s to die. Well, it hasn't. Why, I don't know, but I assume that there are still sites which do not get rec. groups.

I am all in favor of eliminating a.r.s, IF everyone now gets r.r.s. If not, my vote would be to continue to crosspost to allow all users to get all posts...

2652. AR8000, narrow AM filter mod

Newsgroup: rec.radio.scanner
Date: 1996-07-12 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4s67df$os4@mrnews.mro.dec.com>
Source record: 229955

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

Ken

Hello all.
Here in England, about 3 years ago, we had a cordless phone system called RABBIT. The system consisted of a home base station and handset with charger stand.

I addition to the home system, Hutchinson Telecom, the the company who ran the system, installed many thousands of low power base stations all over the country. They could be found in such places as Railway stations, shopping centres, bus stations, corner shops, motorway service centres and roadside restaurants, and many other similar places.

Calls could be made from within about 300 yds of these base stations, but there was no facility for incoming calls except when using your home base station.

The system was very good, but the number of suscribers proved to be insufficient, and the network was closed down after about 18 months.

A lot of these phones are still in use as normal cordless telephones and the technology used makes them very secure.

The were made by GPT (GEC/Plessy Telecommunications) in Wales, and used the CT2 (Cordless Telephone 2) protocol. This is a digital system using a single frequency for full duplex operation, by rapidly switching the base and handset between transmit and receive, using a digital storage technique. There are 40 channels in the 860 Mhz range available and the phone automatically chooses a different channel each time it is used.

Up to nine handsets can be registered on each home base station and calls transferred between them. Just like the Cellphones, each handset has a unique electronic serial number, and have a comprehensive range of password and call barring facilities. The useful range is much greater than a conventional analogue cordless phone, and the audio quality is excellent.

Now the bad news, they are no longer available. Occasionally a second hand one can be picked up, but they are quite rare, as people tend to hang on to them.

Hope this is of some interest.

Cheers.

Of course instead of watching the grass die, you could smoke some grass while listening to cellular calls. Then you would be breaking 2 worthless laws instead of just one, and the cell calls may sound more interesting. ;)

To most of us it is just aggravating that because an industry has Washington in their back pocket they can do whatever they want. It is more of the principal then the actual joy of listening.

I extend myself here, gaining NO personal profit, to make fellow hobbyists aware of what I feel is a good deal, and out of no where, you stick your nose in and make a serious accusation impuning my integrity.

You have some set, my friend.

First, I'm sure we'd all like a defination of "d4y times" However, I THINK I remember you, but not exactly sure of what it is you're complaining about.

The lack of THAT information gives the impression to others here that I am some kind of scam artist, and that I in some way accepted money, etc., and did not ship a radio.

I've been involved in literally hundreds of radio deals here and on the Compuserve HAMNET. Although many might not agree with my radio "politics", I've NEVER, EVER been dishonest, and 99.9% of all those folks have more then happy with the deals I made for them. I can provide a substantial list of parties from BOTH venues vouching for my credibility.

This deal on the AR 2700 is for real, I assure you, and the radios will be made available.

Now, if there is some problem that you had or APPARENTLY STILL HAVE with me, I would've appreciated the courtesy of discussing this privatley in E-Mail and being afforded an opportunity to right a

wrong, if there was in fact a wrong committed against you.

You, sir, are apparently NOT courteous, and have dragged this publicly for all to see, and for me to be damaged. This is the shame, and major downside of cyber - relations.

I would be happy to discuss this mater with you, either via E-Mail, where it SHOULD be, or here, should you persist.

Be forewarned, however, that if you wish to debate me here publicly, you will suffer the wrath of my angst, lest you know of what you speak.

I'm getting some great skip action too, here in Kentucky. I've picked up what appears to be New York taxi cabs, including many speaking in Spanish. It may be stuff from below US border, too. I'm getting these all over the 35.00-40mhz, and in the 44mhz range too.

I just purchased this scanner from Radio Shack for $199.95. I am pleased so far with it. It is identical to the Uniden 890xlt. I like it because it has the CTCSS option. I would like to know about any mods for this or other tips.

It really depends what freq range you want to listen to. If you are doing primarily vhf lo and hi, just about anything would work. If you want to listen to 800 MHz, that is a whole different story. I currently use a Nevada ScanKing 1500 mounted at about 20' with my 9000xlt. The cable length is probably 25'+. If I use rg-58, I can barely pick up the trunked system tower that is about 12 miles away. Substitute rg-8 and I get 20-30 mile range. Substitute Beldin 9913 and it goes up to about 40 miles. I ended up with 1/2 hardline and I routinely get 800 MHz signals from 50+ miles away.

Same radio, same antenna and position...different coax. Just FYI...your mileage may vary.

>

I hear you however everyone has their niche'.
Some may argue that whatever it is YOU enjoy listening to could be
deemed boring.
I don't have the time (or the interest) to listen to anything but
amateur radio frequencies or some occasional DX on lowband VHF when the
Sporadic-E or some F-layer skip is running, mainly for the curiousity
about the propagation conditions.
Although my scanner happen to cover it, I personally wouldn't miss the
cellular band.

Cheers,

Hugh Duff VA3TO Toronto

Andy you didn't give your opinion on scanners listening in on
police calls, Our police and sheriff departments are very much in
favor of scanner listeners, They have on numerous occasions have
helped police catch bad guys in there neighborhoods by looking out
their windows when something has happened in the neighborhood and
alerting the police as to what was seen. They also have advised the
police where a location is that the local pd is having trouble
finding. You might say that the scanner is a way of activating a
neighborhood watch.

As for a pd not wanting an average user to listen would make me
question the honor of that pd. What do they have to hide? How many
video tapings of police doing wrong will it take to cause a law to be
written making using camcorders to tape police in their duties
illegal?

Oops, got off of the subject for a minute. The use of scanners by
criminals to break the law can be averted by using signal codes and
10 codes almost entirely without to much plain english talk. The
serious scanner user after a lot more effort than 99 percent of the
criminals would invest in would learn the more often used codes.
Remember crooks are after the fast big buck!

Oh, I don't mind that people listen to us...but I don't like it when they
get irritated with what we say on the radio. I've heard of citizens
calling in saying that they heard such and such and they think it was
insensitive, blah blah blah. They need to remember that we are conducting
"business"...not entertaining people. If they don't like hearing something

on the scanner, they know where the "off" knob is.

That is my only problem with scanner type folks. (A group of which I consider myself a member.)

As for "hiding" information from the citizens, the nature of the business requires a certain amount of secrecy. Cops don't like everyone knowing what they are doing where, etc. Not because they are going to do something wrong, but because they want things like the element of surprise or to keep gawkers from swarming a call and fouling up a crime scene. That's all. It's hard to explain to someone that hasn't been a cop or a dispatcher. Until you've been in their shoes you'll never understand. Yeah...I know...cops get paid by the citizens...we get that "I pay your salary" story all the time. That may be true, but it doesn't mean that every citizen has the right to every detail of every thing every cop does. The paranoid types can visualize all the wrong doing they want, but in spite of all the negative publicity, cops are still statistically less prone to criminal behavior than the clergy.

The last point, about criminals using scanners...I can honestly say that in the 14 plus years I've been in the business there has been 2 or 3 times that we have had bad guys using scanners. (Maybe there are lots more, and we simply can't catch them BECAUSE they have scanners!!! Grin!!) Anyway, I don't recall any instance in my career where a scanner user helped us out, either.

Bottom line...my personal feeling is listen all you want, and if you have something really good to call us about, then by all means do so. Otherwise just sit back and enjoy and turn it off when you go to bed...that's what I do.

Andy

2683. Missouri "skip" in Saskatchewan

Newsgroup: rec.radio.scanner
Date: 1996-07-12 00:00:00 UTC
From: pbaran@awinc.com
Message-ID: <4s4lm7$ku7@kryten.awinc.com>
Source record: 230033

I have been picking some pretty wild "skip" transmissions over the last month or so. The Missouri State Troopers have been coming in clear as a bell out here in Yorkton, Saskatchewan, Canada; which is about 1200 miles from Springfield, Missouri! Tonight has been particularly active on three frequencies: 42.060, 42.120, & 42.380. I am curious to know if there are any more Trooper frequencies in the same range. I've been listening to transmissions which include such terms as "KAA-27", "KAA-204", "10-46"; as well as locations which include "I-44 west of Springfield", "north of Cabool" "I-44 east of Rolla", etc.

If there is anyone from Missouri, (or anywhere else) that can supply me with any of the MST "10 Codes" or any other pertinent freqs or codes, I'd sure appreciate it! If I'm going to be listening to these transmissions, I'd sure like to know what they're talking about ;).

Thanks for any help, in advance.

: >with areas going digital? any advice welcome. tthank you

: Any scanner that doesn't use crystals is digital. The analog is only
: in the reciever section, which is essential given that that is the
: mode of transmission. Maybe you had something more specific in mind?

I think the original poster meant digital signal transmissions, vs. the
more traditional analog signals.

Rather than what kind of display happens to be on the scanner.

Try 42.020. 42.220, and 42.320 or just scan the 42 mHz range and see
what you pick up.

This is a Uniden Bearcat 890 XLT with the Radio Shack name on it. Uniden still sells this model new. This model hasn't been produced for Radio Shack since 1994. The radio has some nice features but it very prone to intermodulation. I had two units and returned both of them. The first unit picked up an FM station in the 453 mHz range instead of one of my local police forces. The second unit picked up a county sheriff located 150 miles from my house. The county sheriff routinely came in on my priority channel and caused me to miss transmissions from my loca police. For $199 you I would recommend you try it. If you like it great, if not you have 30 days to return and get your money back.

>I need to know the procedure involved.

It depends on the date code on the back of the unit. It must be BEFORE "7A4" to work. (The last digit is the year of manufacture, eg - 4 = 1994)

I have links to lots of mod sites. Check some out....

From: dstark@frontiernet.net
Message-ID: <4s4d4o$q9k@cheatum.frontiernet.net>
Source record: 230043

This evening (00:00 to 02:00 UTC) I was hearing some low band skip in Rochester, NY.

The most persistent signal was KNIJ-368 on 33.90. A search of the Percon database identified this as Lafourche Parish, Louisiana. Moderate signal with some fading - many EMS dispatches, one fire alarm heard.

Another positive ID was KBJ-221 on 46.38, which turns out to be Walworth County, Wisconsin. Very strong signal, but only two transmissions, one of which was a time check with the callsign.

This does work. I have a 200xlt that came with these instructions. It had allready been modified for racing use and the company that sold and modified it included the instructions for cell phones. Seems like it was illegal for them to do it but not to tell someone else how.

I have a uniden sc150y datecode ofid, if i put it in battery test mode by holding down the wx and l/o buttons and turning it on, i then can select banks 1-8 and it comes up with a number like 1.75,with "up" displayed in front of it, then by pressing the up/down arrow keys i can change this up to 4.00 or down to about 1.50. then by pressing dc/bnk it comes up with another number that can be changed between 1 and 50, this has a "n" in front of the number. then i can press hold and press the up/down keys and it comes up with another number "lo" can can be changed from the "up" number to 0.00. i can do this with banks 1-8 so there are 24 number which can be changed. Does any body know what is going on?

What I like to do is program all low band fire channels into a bank, and you'll hear emergency traffic from all over the country.

33.9 is active in S. La, but it is not the local station you mentioned. Too far for line of site.

I have a Yeasu Ft-290rmk2 2mtr ssb,fm,cw rig for sale.

I have ony used it a few times and had great results on audio

quality and power output.

It has one finger smudge on upper left side of plastic bezzel and

works great.

This unit has the original box and paperwork.

I would like to trade for a milspec dual band mobile and I would

pay difference.

I may sell alone if proper offer is established.

New prices are now down to about $600 if you are interested.

This is still a current model!

A DOUBLE thumbs up to you, Paul!! Go for it. I certainly would prefer
that all of the frequency requests be in one newsgroup. However, I
think you'll still find cross posting because "newbies" won't even know
there is a group specifically for that purpose and "others" won't care.
You certainly have my support. sks

How often should a scanner be aligned: when frequency critical parts are changed or if there has been a change in sensitivity ... and I kind of answered the second question there, too.

I had an old Regency programmable (Touch M400, I think) that one day would not work in the aircraft band. The same VCO (p/o of the synthsizer) was used for VHF Hi-band and aircraft. The solution was a slight touch-up of the VCO coil, allowing it to tune low enough into the aircraft band.
Most scanners today are a lot more exotic than that old Regency. Today's scanners use stripline technology (resulting in fixed tuned circuitry) wideband or 'pass-band' front ends and employ frequency up-conversion to high a IF (like 600 MHz or so -don't quote me or I'll have to look it up - as in the RS PRO-2006). Aligning these takes some good shop equipment. The manuals I've ordered from RS and Uniden give procedures to do this, but like I said, you may need the right equipment.
Regards. Jim

2708. How Many L.E.O's Are Scanner Buffs?

I recently retired from a 20+ year career in law enforcement in the western New York community of Amherst. Even before the time I became a police officer, I enjoyed listening to the public service bands. Of course, the units then were tuned by a dial and then came the crystal controlled units (my first was a Bearcat 3). Anyhow, many of my friends on the job often kidded me about my hobby and wonderd how I could find such listening actually enjoyable. Their rationale was that "8 hours of that stuff is enough!" Now that my career is over because of health reasons, I'm still at it with the scanners which made me think to ask how many other people on this area of the net are both scanner buffs as well as being either police officers / firemen / EMT's etc. ???

For an interesting perspective (the EDACS vendor) plus some timelines when the EDACS system incorporated 'digital' (ala TDMA style) check out: www.ericsson.com

This 'homepage' for the vendor who also supplied the equpiment for the Digital Cellular system in the Dallas-Fort Worth MSA (11 counties plus the Sherman/Denison MSA makes 12 counties) also gives some good insight into digital cellular: TDMA/IS-136 (operational in Dallas/Fort Worth) and CDMA/IS-95 (under going testing - commercial use soon)

Regards, Jim, System Deisgn Eng formerly with AT&T Wireless Services in Dallas

Rich, if they are going 'digital' then you need a 'digital converter' (none built yet, to my knowledge) to take the digital data (digitized speech) from your scanner (like someplace in the IF) and convert it (using the correct format - that can be the trick) back into normal speech.

Rich, also check out www.ericsson.com ...

... page down and look for stuff on SMR or PMR systems - this is where EDACS is desribed in a little more detail, mainly in mild techno speak imntended for marketing purposes to cities, etc.

Hope this helps. Regards, Jim

Thought I would respond with this post ...

We have call boxes that operate in the cellular band down here. A dedicated cell phone (a special 'flash' or version of software in the main phone board) and a ruggidized box plus batt and solar panel ...

Also ...
There are routines (programs) that run in today's switches (the nerve center/controlling computer that cell sites are T-spanned back to) that log (record) multiple registration attempts.

A 'registration attempt' is made by a phone whenever a cell phone is turned - this is done to let the system know you are there and available for calls. The Registration takes place on (what we call in the business) the sig (short for signalling, which is just too big a word for everyday use) or control channel (CC for short).

This will be done if the cell system is set for 'autonomous registration' and most are - this also makes call delivery work when you are is a different city and you can still get incoming calls.

When the phone 'registers' it transmits a short burst on the control channel (you can observe this with a field strength receiver near the phone - an AM

radio placed nearby will also click when this happens) and it 'registers' with the system giving it's NAM and ESN. Additionally, about every 5 to 10 minutes (depending on certain programmed system parameters) the phone will register again. This is called 'periodic registration'. This lets the system know your phone is still active in the area. After a period of time with the phone off (and no periodic registrations taking place) your phone will be marked 'inactive' in the HLR (Home Location Register - the database of all home or local subscribers.).

If multiple registrations begin to occur with the same NAM ('cellular phone number) and this is observed by 'the switch' the cellular operator gets some indication of a possible attempt at fraud.

Very little is said in plain english by our police departments
they have signal and ten codes for almost all calls, one of them even
has codes to indicate locations. I don't recall ever hearing of a
scanner listener complain about what was overheard from what they
heard on a scanner , but I have heard of complaints from gawkers at
the scene by the way it is rare to see a scanner listener at a scene

unless they are unfortunate enough to stumble there. (In Nortwest Alabama anyway). As a fireman for 9 years most of our gawkers were either there because they heard on the TV , Radio or just happen onto the scene.

There is no room in law enforcement for secrets to be kept because of the nature of job!!! If secrets were allowed we could repeat the 20's and 30's were every other cop was on the take. TEMPORARY USE of discretion is warranted in certain situations.

As for salaries, they are to way to low for cops. They have to do the job out of there love for justice and helping there Americans friends or a crook looking for connections. MOST COPS ARE HONEST but in any large group of people, such a police departments there will be bad ones, remember 1 bad apple does ruin the whole bunch if not removed quickley.

Maybe your police department should let the public know that if they here something on the scanner and then see something that maybe of help it would OK and WELCOMED if they called, because they can be a very big help.

What do you mean when you say an antenna "cut for the middle" for the
military frequencies. Do you mean literally to cut the antenna in half.
What does this do?

Thanks in advance for your reply. I am relatively new to scanning.

Dana (and everybody else):

I own the OPTO Scout and AR800 combo. It performs as advertised.

The performance does vary drasticaly though.

When I am in Edina, MN (suburb of Minneapolis), the scout cannot pick up a handi-talkie more than 10 feet away (using the 'stub' antenna). This is due to the high concentration of hoptitals and pagers in the area.

On the other hand, I my home suburb of Shakopee (a little farther in the sticks), and when using my dual band ham radio antenna (hooked up to the scout), the range of "hits" is around 1 mile (with a powerful transmitter such as a police repeater). The scout has trouble with FM Broadcast stations (useless in the vicinity {3 miles give or take} of the tower). It just locks on some FM broadcast like 105.7 in Minnetonka.

It works really well undercover like in a casino or mall. In fact, I went to a local Sears store, picked up the Loss Prevention frequency and programmed that frequency into a scanner that was on display. I'm sure that freaked someone out!

I was able to quickly acquire two local casino frequency(s). Casinos have MANY frequencies.

When travelling north of the 'Cities on I35 and using my dual band ham antenna mounted on my truck, I was able to 'reaction tune' many of the small town police departments on the way to Duluth. I would estimate that the towers were a half mile away. I also picked up many mobile police and business band activities.

In Burnsville, MN (another MPLS suburb) while driving around, the scout reaction tuned the 147.21 Amateur Radio Repeater. But when the local police transmitted, it reaction tuned the police until they were done and went back to the ham repeater. The ham repeater was approx 3/4 mile away. Once again, I was using my roof mounted dual band ham antenna on the Scout.

If the approx. $1000 price is not a problem for you, I would recommend the system. Be prepared to hear lots of pager tower screaming though and use a roof mounted dual bander antenna on your vehicle.

The AR8000 and Scout have made the scanning hobby a little more "active" i.e. your travel to the sites where you want to acquire your frequencies.

I am not connected in any way with Optoelectronics or AOR.

Regards,

Jay Lyle

In the county I live in, it's not uncommon at all for citizens to call in and tip off the County Sheriff's office when they're hunting for someone pretty hard. I don't know how many times I've been listening when some anonymous caller gives a tip where to find what they're lookin' for. In short, you can't fart in this county without some sharp eyed (or nosed in this case) grandma callin' the Sheriff. Makes for a nice peaceful county to live in. :) And, last but not least, cellular phones have really made it tough on drivers with an attitude or a snoot full of hooch. Lott'sa calls go in about them.

Have a good one... Hutch

I think I lot has to do with the fact that it is illegal to listen to cell phones. When it wasn't illegal, it was never a big issue. As with most things, it doesn't got popular until the government doesn't let you do it.

People simply enjoy doing illegal activities (that they really can never get caught doing).

O.K.! Now I remember you, Doug, and Iam quite perplexed as I thought
I did the right thing by you.

Please excuse the initial non-recognition of your name, but as I said,
I do get involved in buying and selling alot here and on the HAMNET.
The reason for this is that many of my radio friends do not have
computer access, so I buy and sell equipment for them as well.

The SONY 2010 you mentioned was just such an item I was selling as a
favor for a friend. Upon returning from my trip, and getting the radi
from my friend, I noticed that the radio was defective..problems with
the AC input jack, which I understand is a common problem with these
radios. I did not and would not attach my name to the sale of a radio
that I knew was defective. My friend did not want to have it
repaired, so the deal was off. I E-Mailed you a message as to the
above, and never received a reply, assuming that you got the messsage.
I di dnot receive further inquiries from you, so I figured the point
was moot.

It is obvious, then that you did try to rectify this via E-Mail, but
for some reason, we could not connect. For that I apologize publicly.

However, I would also ask that you acknowledge as well the fact that
NO money changed hands, nor were you ever defrauded in any way.

Please be assured that the 2010 did not go to a higher bidder as you
suggest. As a matter of fact, my friend still has it, and the AC plug
is still defective!

It is unfortunate that we had to air our laundry here and bore
everyone else to death, but I'm glad to see we may be working toward
mending fences. To that end, I would offer to assist you in

obtaining another similar radio, should you still desire, or to help
you in any other way. Hopefully we can part as friends.

MO>Thank you very much.

MO>Moncef
MO>madiser@mbox.azure.net

The circuit is just a MAX232 to do the CMOS to EIA232 translation. The
big problem is getting a connector to fit the radio, which is why
OPTO uses mini-phone jacks. If your serious, I'll look for the connector
pins outs for the AR8K. Its in this computer someplace!

You'll still need software such as scanstar to run it.

RM>Regards, Raymond Miller N2NJK

In the Bay Area Scanner Enthusiast (BASE) club we have a few LEOs. They
also tend to be hams too. It would be useful for any police department
to have somebody who knows anything about radios or repeaters. It would
save the cities millions because anybody who knows their stuff would
never buy an 800MHZ trunk system. The worst has got to be trunked
systems with microwave links that fail in the fog (Livermore CA).

I hear LEOs talk about scanning on their backup (car-to-car) channels,
especially in the smaller cities. For instance, an officer in Los Gatos
would monitor San Jose Freq 4 because San Jose's event could be his
in a matter of minutes. Very often I'll hear the same perps rob two
different nearby towns in the same night. Eventually the dispatchers
figure this out and repeat the BOL of the similar event. If the cop
was scanning he may get a head start.

I have the Vtech Platinum. It was the only phone that I could find
that was digital, 900 Mhz, and had a caller ID screen on the head set.
I have tried scanning for the freq's but all I get is something that
sounds like an "open carrier". And I have to be right next to the
phone to pick it up. I am very satisfied with the phone.

I assume the MB-12 will also fit the R-7000, which I believe to
have the R-71-style case. New in box, hang your radio from
your dash or from your desk.

$47 new, asking $25.

Hey Steve, I think you are onto something!

OK folks, I took a few minutes and located some documents that explain how to apply to get a newsgroup reorganized. I found where the proposal has to be posted and what it has to say. So, before I do a lot of writing, on an informal basis, what would you say to:

Replace alt.radio.scanner with alt.radio.scanner.cellular.monitor???
Create rec.radio.scanner.freqs?

The rationale would be, cell monitoring is a distinct topic which is appropriate to be discussed separately; it's 'naughty' in some countries, but legal in others, so it fits well in the spirit of the 'alt' hierarchy and keeps the rec group 'legal'; deleting alt.radio.scanner puts all the scanner related discussion in one place, cleans up a lot of needless crossposting, and spares readers a fair volume of posts unless they choose to be interested in that topic.

Regards
Paul

2753. Texas DPS/Highway Patrol Use Mobile Repeaters?

Newsgroup: rec.radio.scanner
Date: 1996-07-13 00:00:00 UTC

My new radio shack flyer came in the mail yesterday. They have reduced the price of the PRO-60 by $130, selling it now for $249.95 (NEW!).

I'll go $150 on your PRO-60.

: I have the tower freqs as 119.0 119.3 and 120.2
: I have a couple of military aircraft freqs as 239.0 and 303.0
: I have a couple of helocopter freqs at 122.75 and 123.025

During the show last year, I was able to catch the skydiving team
on 123.475 -

The best catches were the morning after the show, though -

A lot of the military hardware showed up on the
clearance frequency, 239.0 (as you noted), as well as the
approach and departure frequencies 338.2 and 395.9. Living
more or less under the flight path - I spent the morning at
the window with a radio in one hand, binoculars in the other 8*)

Good luck -

>
>Same radio, same antenna and position...different coax. Just FYI...your
>mileage may vary.

I ended up doing exactly the same thing. My results were very similar
to yours.

This will give folks an idea of the loss they can expect for some
different types of coax. The figures are for 100' of coax. The
frequency is 1000Mhz. (* indicates 900Mhz.)

coax db loss % loss (approx.)
RG-58 22.0 99.4%
RG-8/m 13.0 95.0%
RG-8 12.0 94.0%
RG-59* 10.6 91.0%
RG-6* 8.3 85.0%
Belden
8214 7.0 80.0%
Belden
9913 4.5 64.0%

This list is by no means complete. It does give you an idea of the
type of loss you can expect. Shorter runs will give you less loss,
naturally. Also, as a rule, as loss goes down, price goes up...and
up...

Principles aren't of much account anyway, except at election time.
After that you hang them up to let them season.

Yup! I'm getting Missouri Highway Patrol here in Ottawa, Canada they
referred to Monroe City (near Hanibal). But this is common here in Ottawa.
The local Ontario Provincial Police here used to operate on 42.060 and
42.220 use to comment, It's going to rain we can hear Missouri! Skip is
fun. I use a Road Atlas to help me figure out were they are, usally they
will give a place name if you monitor for a while...

I rather enjoy Low VHF public utility skip. I always keep 42.120 Mhz plugged into my Pro-2005, because I have found it is the most common Highway Patrol frequency. So if the skip is running I'll will usally get it on that freq.. When I see the skip is up, I'll switch to a bank of known actives. Some kewl stuff I have heard during the real hot sun spot cycle 1989/90 was; Range Control at White Sands, Missouri, CHiP's and South Carolina State Police all at the same time on 42.120 Mhz, Lancaster, Penn Emergency Services (sounded like Police/Fire/Ambulance on shared dispatch) Some really good live fire US Military somewhere in S.W. USA someone had a open mike so you heard all the chatter in a tank (apc?) could here the big gun, as well as the M-60 blasting away! Sounded like a pretty good exercise. Skip IMHO is more interesting than trying to hear how many burgers the fat guy just ordered at the drive through...

I'm sure if you wonder around in Vic Healey's WEB page you'll find it and much more.

Check www.crl.com/~vhealy/ar8000/homepage.html

I found one by Pete Folberth (sp) that has a couple of transistors and diodes and 4 resistors. Looks as if it could be built into a DB connector hood but I'm going to build mine in a breakout box.

I ordered the SAC8000 from AES for $29.95. It has the AR8000 connecotr on one end and a DB-25 on the other. That takes care of the connector problem and it's much cheaper than the EEB or OPTO interfaces.

Peter also has 4 basic programs that are short and easy. One to download, one to convert AR file to ascii, one to convert ascii to AR file and one to upload. If I could figure out how to attach his file I'd send it to you.

good luck

I have a Pro-39 for sale for $185 plus any shipping (unless you are close to San Jose, CA and can pick it up). I have the original box and manuals plus it has been unblocked for cellular.

2773. BC3000XLT missing 550-760MHz?

Newsgroup: rec.radio.scanner
Date: 1996-07-14 00:00:00 UTC
From: mose@ns.ccsn.edu
Message-ID: <4sbo14$g0q@ns.ccsn.edu>
Source record: 229801

I'm curious why the BC3000XLT is missing the frequency range from about 550MHz to 760MHz. I know that it only contains the UHF TV channels, but as long as you're building a radio, why not cover the entire range? They claim to cover everything else from 25MHz to 1.3GHz (excluding cellular).
On a side note, is the BC3000XLT really continuous from 25MHz to 550MHz and 760MHz to 1.3GHz (excluding cellular)? I noticed that the PRO-26 covers the same frequency range, but it leaves out a few MHz here and there along the way whenever the default mode changes.

TECHNICAL QUESTIONS AND ANSWERS
==========

021: How do I restore cellular in my SnakeBite "XR-7715" ?

Forget it, pal. It ain't going to happen. The TDDRA
Act of 1994 expressly forbids the manufacture or
importation of "easily modified for cellular" scanners
after April, 1994. Manufacturers turned to putty and
removed the cellular programming from the scanners'
CPUs altogether. Sorry, it's not possible. But here
is a list of all those scanners of which I am aware
that are capable of cellular restoration:

PRO-2004 BC-855XLT *3 Regency 4030
PRO-2005 BC-200XLT Regency 1600
PRO-2006 BC-205XLT
PRO-2022 BC-760XLT *4
PRO-2026 *2 BC-700XLTA *4
PRO-2027 BC-890XLT *4
PRO-2030 BC-950XLT
PRO-2032 BC-2500XLT *3
PRO-34
PRO-37
PRO-39
PRO-43 *1
PRO-46 *2
PRO-51 *2

PRO-23 *2

Note 1: Date of Mfg code 1A4, 2A4, xA3, xA2 (label in battery compartment), or no "A" in the serial number.

Note 2: Date of mfg code 1A4, 2A4, -A3, -A2 (label on back).

Note 3: Date of mfg code must not end in the letter "D", except for OAID.

Note 4: Date of mfg code must not end in the letter "D".

For instance, PRO-43's imported before March, 1994, are modifiable, while some brought in during March and all thereafter are impossible to modify. Date codes of any -A2 or -A3 and only 1A4 and 2A4 are assured of being modifiable. 3A4 and up probably aren't.

The above list does not include those scanners that were naturally capable of receiving the full 800 MHz band, without modification, some of which include:

J.I.L. SX-400 AOR-950 Icom R-7100
Regency MX-4000 AOR-1000 Icom R-1
Regency MX-5000 AOR-1500 Icom R-100
Kenwood RZ-1 AOR-2500 Icom R-9000
Uniden BC-800XLT AOR-3000 Icom R-7000
Yaesu FRG-9600 AOR-8000

Some of these radios, if still current, had the cellular removed by the factory after April, 1994.

==========
021a: Are any mods available for my "SnakeBite XR-7715"?

Shooooey, dude, you have the wrong impression about scanner modifications and hacking. Mods are not "available" in the sense that they can be found on a store shelf, or laying on the top of someone's mind who can tell you in so many words or less how to turn that "Snakebite" scanner into a fire-breathing, rip-snorting behemoth of a Turbowhopper. All scanners can be modified for something; generally a dozen or more things. But only a few scanners have anything written about them in detail. And you have to know where to LOOK. You can't just up and ask for them. It takes me several days to several weeks and sometimes MONTHS to work up and write about a hotshot mod for a decent scanner, and after THAT level of effort, it's not possible to make it "available" off the tip of my

fingertips. Continue reading below. There are
answers to your question.....

==========
022: Where can I find mods for my SnakeBite XR-7715?

You can't. There are only a handful of scanners ever
made that were worth solitary, focused research and
development, specifically for that scanner. Those
scanners include the following:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042
PRO-2022 PRO-43 PRO-34 PRO-37 BC-200XLT
PRO-26 PRO-39 BC-3000

You may find occasional articles, files, and "mods"
expressly for other scanners not mentioned above, but
they are the exception to the rule. Start by looking
through the file section on my BBS (619) 578-9247, and
peruse quicklinks to other sites from my WWW HomePage:

http://ourworld.compuserve.com/homepages/bcheek

My BBS has hundreds of files on a wide array of radios
and you are welcome to peruse the list. My homepage
has quicklinks to hundreds of other sites that may contain
a file or two on your "Snakebite" scanner.

Now here is the problem: I am one of the few, if not
the ONLY engineer fully committed to scanner mods.

Yet, there are over 500 scanners on the historical list
now. It is physically impossible for me to dedicate
attention to any but a few, and I have to choose those
owned by the greatest numbers of people who will
support my efforts and enable me to pay the rent; put
food on the table; and educate the kids. That small
list of scanners above reaches out to tens or hundreds of
thousands of owners. There is no time left for me to work
on "SnakeBite" scanners that have very little to offer, even
after hours of hard work! But take cheer and read on.....

==========
023: So you mean there are no mods for my "SnakeBite"?

More or less I mean that, yes. But, that's not to say
it can't be modified. It can! It's just that there is
nothing published for it; nothing in the way of step-by
step instructions with graphics, photos, and details.

No one would go to the time and trouble, you see?

An engineer who is capable of designing super-hacks
for that "SnakeBite" scanner is not going to own one!

Instead, he will own one from the above list, one that
is eminently capable of some very powerful modifications
in the first place.

Now I said your "SnakeBite" can be hacked. It can.

But you are more or less on your own in the sense that
I cannot direct you to a "shopping list" of mods from
which you can pick and choose. There is no such list.
Any hope for you is to figure out what you want to do,
and ask me a specific question. I can tell you a few
answers in advance:

No.

No, your "SnakeBite" is not capable of cellular; extra
memory; additional bands of frequencies; and things of
that nature that pretty much require factory design in
the first place. (See ahead for Memory Modifications)

Yes.

Yes, your "SnakeBite" is probably capable of a few analog
modifications along these lines:

1. Tape Recorder Jack
2. Automatic Tape Recorder Switch (beats VOX!)
3. Extended Delay
4. Tone Decoder-Rejector Countermeasure
5. CTCSS mod
6. S-Meter
7. Scanner-to-Shortwave Interface
8. Carrier-On-Indicator
9. Audio Improvements
10. Beep volume or disable
11. Squelch Improvements
12. Remote Controller
13. Baseband audio outputs
14. Event Counter
15. Shielding of plastic cases
16. External DC power
17. Improved Adjacent Channel Rejection
18. Speed up of SCAN & SEARCH modes

Then, maybe...depending....on the scanner.... the following
digital and/or esoteric enhancements.....???

19. Interfacing to a computer
20. Subsidiary Carrier (SCA)
21. Extended Memory to 25,600-channels & up
22. Cellular restoration
23. 54-88 MHz restoration
24. Data/Tone/Noise Rejector

==========
024: So how can I do some of these mods?

That's a problem. No one has written them up for your "SnakeBite". About the only way I can think of is to get one or more of my three books and a subscription to the WORLD SCANNER REPORT. Research and study up on the mods we've developed for other scanners, and then compare the procedures for that specific scanner to your "Snakebite". Often, when I write up a mod, I give hints on how to apply it to other scanners.

Also, if you ask me specific questions, I can often give specific answers. If you ask me "how to do a memory mod", I'll just refer you to something already in print or published somewhere. If you are doing a memory mod and run into trouble, then I will help you with that trouble.

==========
025: Memory mods? How can I increase the programmable channels?

That depends on what kind of memory storage system is used by your scanner. There are three kinds:

1. On-board CPU RAM (Random Access Memory)
2. Static Random Access Memory (SRAM)
3. EEPROM Electrically Erasable Programmable Read Only Memory.

The first kind is most prevalent and there is no way to expand that kind of memory. It is, however, usually limited to scanners with 51 channels or less of programmable memory. 100-channels and up are usually done by methods 2 or 3. So your first step is to determine what kind of memory is used by your scanner.

EEPROM memory is expandable, but very difficult under most circumstances. SRAM is the easiest and offers the largest expansion capabilities. For example, the PRO-2004, PRO-2005, and PRO-2006 can be expanded to 25,600 programmable channels (and more)! The PRO-32, PRO-34, PRO-37, PRO-39 & PRO-2022 can go to 12,800-channels and beyond. The BC-760XLT, BC-560XLT, and a few others can be taken to 6,400 channels and more. The PRO-2035 and PRO-2042 can go to 16,000 channels and up.

My Extended Memory Modifications are amply documented in excruciating detail in my books and in the WORLD SCANNER REPORT, complete with diagrams, photos, and many pages of instructions such that most casual hobbyists who know a soldering iron from a tire iron can do the work. This kind of mod is not suited to being given out in an e-mail message in so many words or less, so you will need to acquire the instructions

before doing the work.

==========
026: How do I tell a SRAM chip from an EEPROM from CPU RAM?

If you can't do this on your own or after the below explanation, you are probably not a candidate for such a wild adventure at this stage of your hacking career.

Most CPUs hold a small amount of RAM (random-access-memory), sufficient to store anywhere from 10 to 50, maybe a hundred channels or so. This is the case for most scanners, so there is no way to increase that memory. Fortunately, there are two other methods of RAM used by a few scanners that offer possibilities for expansion.

EEPROM: The least common and least expansive is EEPROM (electrically erasable programmable read-only-memory). The PRO-43, BC-2500XLT, BC-200XLT, BC-100XLT and BC-3000XLT use EEPROM programmable memory. It is possible to expand EEPROM-type of memory, though not by such huge proportions as the SRAM type. EEPROMs are usually tiny little chips with 8-pins.

SRAM: A handful of scanners use a separate SRAM (static random-access-memory) chip for storage of frequencies and custom channel settings. It is this type of memory that can be easily and economically expanded by factors of 2, 4, 8, 16 and even 64 times the original volume! Scanners known to employ SRAM memory include the following:

PRO-2004 PRO-2021 PRO-32 BC-760XLT
PRO-2005 PRO-2022 PRO-34 BC-950XLT
PRO-2006 PRO-2032 PRO-37 BC-590XLT
PRO-2035 PRO-2042 PRO-39 BC-600XLT

There may well be other scanners that use SRAM memory, but either I forgot about them or don't know. If you're curious about your scanner's potential for memory expansion, you can just about forget it for those with fewer than 100-channels. The CPU's RAM easily handles 10 to 100 channels or so. If your scanner is not on the above list, but has 100 or more channels, then look over its schematic diagram and parts list or scrutinize its Logic/CPU Board for any of the following types of SRAM chips:

uPD446G-15 TC-5517CF-20 LC-3517BM-15
CXK5864BP MB-8416-20LPF

or something similar, disregarding the last few digits and letters. A SRAM chip is generally characterized by

a rectangular shape with 24 or more pins, each of the longest sides holding half the pins. An SRAM chip in a schematic diagram will be characterized by eighteen or more of its pins going straight to the CPU chip. Any chip with less than 24-pins is not likely to be an SRAM; neither is any chip in a square format. SRAMs are rectangular with 24 to 32 pins. Pinout notation of SRAM chips will include mystic codes such as:

A0, A1...A9, R/W, CE, I01, I02...I08, OE, etc.

==========

027: My "SnakeBite" scanner has an SRAM; how to do the mod?

Get the published instructions for Extended Memory Mods using larger SRAM chips. Start by reviewing the Table of Contents and Index to the World Scanner Report where you will find articles on memory mods. Get at least one of my books to supplement the WORLD SCANNER REPORT. The ULTIMATE SCANNER book is probably the best choice.

The Table of Contents and Index to the World Scanner Report can be found on my HomePage and FTP sites as well as on my BBS. They're also contained in my product information file: PRODINFO.ZIP that I can send by e-mail upon request.

Since all SRAM chips are much alike, my instructions for one scanner will apply to all, and not be that difficult to follow, provided you can find your SRAM chip in the first place.

==========

028: Do you do scanner modifications like memory mods?

Sure. Contact me privately and we can go from there.

==========

029: I'm not interested in all your mods - just one. Will you photocopy the information for me?

Sorry, no. My publishers own the copyright to my books and my company owns the copyrights to material published in the World Scanner Report. It would be unethical, illegal, or both, for me to do that.

If your budget is tight, you can in many cases get basic information for free from my BBS or from me via e-mail and the hard core stuff for $5/up by purchasing specific copies of the World Scanner Report. It is not always necessary to buy my books in order to do the mods. On the other hand, my published mods are NOT the sort you find on most BBS's and Internet sites with a

few sentences or paragraphs and maybe an ASCII drawing
if you're lucky.

My mods are detailed; well documented; and have
excellent graphics, including schematic diagrams,
photos, and illustrations. This kind of work does not
come for free and I make no bones about it. On the
other hand, there is no charge if all you want is how
to do simple mods like the cellular mod to the PRO-2006.

==========
030: So how do I restore cellular in the PRO-2006?

1. Remove the top cover of the scanner.
2. Look down inside the front panel behind the #3 key
of the keyboard, and clip the exposed leads of the
two coppery colored diodes standing on end. One
restores cellular and the other gives a FREE 25%
speedup of the SCAN function.
3. Replace top cover.

See, that's the kind of stuff I can provide for free.
And I am happy to do so. I do not work for free for
days on end, paying out of my pocket the high costs of
photography, graphic arts, and computer operations with
sweat dripping off my brow..... There is a difference.

If you don't believe it, then grab a few free files off
my BBS and others, and some from the Internet.........
and then invest five bucks in a copy of the World
Scanner Report or one of my books.... See for yourself.

==========
031: How can I improve my reception capabilities?

Easy - maybe. Just increase the height of your antenna.
Each 10-ft increment of added height can yield an
apparent "gain" of 3-dB. For scanner signals, 3-dB of
difference can be all the difference between excellent
reception and none at all! There is no substitute for
height of the antenna when trying to receive signals
outside your immediate geographical area of more than
a few miles. VHF and UHF signals weaken dramatically
as they travel along the surface of the earth (ground-
wave); much more so than the spacewave that travels
a couple of wavelengths and more above the earth's
surface. Low antenna heights intercept the spacewave
of only very close transmitters, and the groundwave of
all others. Yes, the quality and type of antenna makes
a difference to a station's reception capabilities, but
the single most important factor is the height of the
antenna, regardless of its quality and type.

==========
032: How can I install the military aero band in my scanner?

You can't, and that's that. If your scanner came with the
military aero band (220-400 MHz), then you're Fat City.
If it did not come with it, there is no way under the sun
of "restoring" it. You can't restore what ain't there.

==========
033: How can I modify my scanner to follow trunked systems?

You can't, and that's that. For one, it would be illegal
to do that according to the ECPA of 1986, but two, the
data formats and software of trunked radio systems are
proprietary and copyrighted by the manufacturer or
vendor and this information is not available to the
public, nor even to technical shops. Each trunked
system is as different as night and day with respect to
all other trunked systems, even from the same vendor. It
is possible for the astute hobbyist to gain some skill and
fortitude in following trunked system conversations. These
techniques are scattered around in various written works,
from books, magazine articles, and prefaces in frequency
directories...to text files on various BBS's and Internet
archives. These techniques, hints, tips, and kinks cannot
be recited here in so many words or less. One good starting
point might be the preface material in any recent edition
of Radio Shack's POLICE CALL books. But in a word, you
cannot alter your scanner to follow trunked signals.

==========
034: My PRO-2004 has problems, first mild and now severe. It
has been repaired several times. Can you fix it?

There is a distinct possibility this PRO-2004 has problems
with defective solder joints. Back in 1986, there was a
production run of the PRO-2004 manufactured with a defective
wave soldering machine. At first, it was only marginally
defective, but it worsened and degraded with time.

The result, by the time the malfunctioning machine was
discovered, was that many defective PRO-2004's had been shipped
to market. Some immediately failed within the warranty period
and were repaired or replaced. Others didn't fail until after
the warranty expired, and were either repaired or junked. Some
didn't fail for years.....

Failures appear to come in waves.....periodic rashes. Defective
solder joints are a serious problem, because the radio can be
fixed only to the extent that it is broken. Repaired solder
joints today have no bearing or relationship to those headed for
failure in a week, a month, or a year. There is no economical
way to repair them all in one fell swoop. A PRO-2004 with

defective solder joints is very likely to develop more problems with the passing of time. There can be no guarantees against subsequent related or unrelated failures.

With that in mind, yes I do such repairs, but I cannot guarantee that other failures won't occur. Costs of repair can be high, and I would estimate the first repair tag to be $100 plus return shipping. I know, it's a bum deal, but I can't do any better than that except to offer to buy the unit for my repair parts bin.

I pay $25 plus shipping for defective PRO-2004's in reasonably clean condition. (No basket cases....) You might consider this as an alternative to continued repair bills.

==========
035: Can my scanner be interfaced to a computer for remote and automated control, as well as for programming of the memory channels by the computer? Can the interface acquire data from the scanner and send it to the computer?

In a word, yes. Most scanners "can" be interfaced to a computer for one-way control and automated programming of the memory channels. It is probably not worth the effort and cost for most scanners, but it can be done. These scanners include:

PRO-2004 PRO-2005 PRO-2006 PRO-2035 PRO-2042 PRO-2022
PRO-34 PRO-37 PRO-39 PRO-43 PRO-26

Probably quite a few others are possible, but.......???

There are three scanners that are capable not only of the one-way mode of remote control and automated programming, but also of a "data acquisition" mode where the scanner sends its display (channel, frequency, bank, mode, delay, lockout) and other data to the computer for automated logging and data processing. These scanners are the PRO-2004, PRO-2005, and PRO-2006.

Several companies make scanner/computer interfaces, including:
Optoelectronics - Datametrics - COMMtronics Engineering

Each interface has its own unique characteristics, advantages, and limitations, but all are "good" in the sense of freeing the operator from much of the labor and drudgery of scanning. The Optoelectronics and Datametrics interfaces are generally limited to the PRO-2005/5 and PRO-2035/2042.

A "roll your own" computer interface was published in the World Scanner Report, V2N1-V2N6. Another more powerful one was published in my 3rd book, THE ULTIMATE SCANNER (Cheek3)

==========

That's it for now. I will keep this FAQ updated. If you see things that need to be added to it, by all means, let me know. If this FAQ

fails to address your question(s), then hit me with 'em again, but be specific. And be detailed with symptoms and observations if you need tech support on mods or troubleshooting and diagnosis. Use e-mail if you can.

>Just like to hear what you guys think about it.

I would say that it is only worth more to a person who wants instant gratification (turn it on and viola cellular). Getting a scanner that can be modded to receive cellular has never been eaysier that it is now. There are very few new scanners out on the market that cannot be restored. This group is loaded with reasonably priced used scanners that can receive cellular. This may not be true in another few years but by then it will be obsolete and you may be selling it for collectability then.

I'm going to be taking a trip to rochester, NY in a couple of weeks. I mapped out my route and decided that I'd pass close to these following airports:

O'Hare Int'l, Chicago
Indianapolis Int'l, Indiana
Detroit Int'l, Michigan

If anyone can provide me with curent frequencies for these airports, I would greatly appreciate it. I'd like to get the freq's for each airport's tower, ground control, approach, departure, ATIS, and clearance departure; and if possible - the military UHF freq's that apply. If you have any of this info please email it to me. Thanks!!!

my email: shep79@napanet.net

Thanks again!

2780. Alphanumeric Pagers

Newsgroup: rec.radio.scanner

I've seen a lot of questions regarding software to capture alphanumeric pages by connecting scanners to computers via sound cards or special devices. However, this is not a valid option as I must keep my scanner on a priority channel. I've seen a device card for the computer advertised called WinRADIO but this is too expensive just to cover a single pager freq.

Does anyone know of card made just for a single frequency with software to capture the specified codes?

And for those that are about to reply with "you don't need to be monitoring private pages...." I have a valid reason for monitoring my pages and my agency's. We will soon be getting alphanumeric pagers provided to us by 911.

Jon-

The only thing I've heard, and it wasn't official, was someone from Universal saying that it would be JUST
under 2000... 1949 or 1999 probably.

Does your spec sheet tell for sure what they've done about the cell bands? One person said that they were told
it would delete the 800-900 band again. I certainly hope not!

Thanks.

Jim-

You really won't make a mistake either way. I have both the 2042 and 2006 with interfaces, and they work
substantially the same.

The 2006 is a _little_ easier to install as you don't have to cut a hole in the back panel of the radio. I'm
also told that the 2006 (actually the OS456 interface) has a little more stable tone reader if you're
interested in doing CTCSS tone squelch and the like. I am using Probe software, which is supposed to correct
for this problem, so I can't really comment.

Have fun, whichever way you decide to go!

Ken

Bendix King UHF commercial grade hand held radio, 210 channel version, downbanded for 440 amateur band, fully field programmable. Includes TWO short 5 watt batteries, drop in desk top charger, keyboard and display covers, manual, and programming manual. The radio is in MINT condition, and is the second of an exact pair of packages that I am selling. The first package went to a happy Compuserve HAMNET member. Both must go to make room for new toys!

$550.00 or best offer, shipped to CONUS E-Mail if interested

The PA Turnpike emergency callbox units use a freq in the 170Mhz range,
I think specifically 171MHz, but don't recall...

The exact freq IS licensed to the State of PA, and can be found in FCC
license info.

The callboxes have a few different icons -- one for a tow truck, one
for a police car, one for an ambulance, etc. There is no voice audio.

Where do you get your statistics? What percentage is "most." Do you quiz
all gawkers and compile numbers about who got their info from where?
>
> There is no room in law enforcement for secrets to be kept
>because of the nature of job!!!

Like I said, unless you've been a cop you'd never understand. Here is a
prime example of that lack of understanding.

>If secrets were allowed we could repeat the 20's and 30's were every >other cop was on the take.

Again, where did you get your statistics on cops in the 20's and 30's?
Are you saying that 50% of all cops back then were crooks? I'd like to
read up on that myself, so let me know where you got the info.

>TEMPORARY USE of discretion is warranted in certain situations.

Where did you go to the police academy? When did you get your degree in
criminal justice? Or are you studying constitutional law?

> Maybe your police department should let the public know that if
>they here something on the scanner and then see something that maybe
>of help it would OK and WELCOMED if they called, because they can be

>a very big help.

What do you think we do if someone calls to say they saw the suspect vehicle they heard about on the scanner...ignore the information? Of course not! In my first post all I said was that I don't recall anyone with a scanner calling in and giving us any valuable information. I didn't say it doesn't happen...I just have not had it happen to me.
>
With all due respect, we have here another example of someone that is not in law enforcement telling law enforcement how to do their job. I'm not going to tell you how to squirt water because I have no training, experience or education in firefighting. It would be rediculous for me to attempt to tell experienced firefighters how to do their job...just like it is rediculous for people with no knowledge/experience in law enforcement to tell the cops how to do their job. If you think cops are doing things improperly, just waltz up to the officer at a scene and start telling him what he is doing wrong...see what that gets you.

Sorry for getting "short." I mean no disrespect, but it simply gets old hearing the same old story over and over again. In the business, people that know more than the cops are often jokingly referred to as "4th year law students." They are the ones that say they have a constitutional right to a phone call, and that anytime someone is arrested, they must be given thier Miranda rights. WRONG!

Sorry for lashing out at you Buddy...nothing personal. I enjoy such debates, but sometimes I get a little too nasty. I'll try to lighten up in the future.

Now cell phones are a different story. We have nabbed lots of drunks and
assorted bad guys because of them. The fact that the cell phone can
follow the crime scene around makes them very useful.

I kind of unloaded on Buddy in a previous reply/post about scanner
listeners. I guess I was having a bad day.

Yes, you are reading that right. Remember, those figures are correct
for 100 feet of cable. Less cable equals less loss. Still, RG-58 is a
poor choice if you want to receive the higher frequencys.

Think of it from the seller's point of view... You have to start somewhere and then negotiate from there. You also have to consider who will pick up shipping. If you've sold a scanner before, then you know that you'll have to pay at least $10 for UPS.

You're wrong in saying that "prices are always way inflated." In fact, they are quite consistent for any given model. People here have a pretty good idea of what the market will bear...Occasionally, someone comes along and asks a price out of the norm, but that doesn't happen all that often. In this case, $200 is high. I bet that if the seller actually sells the scanner, it will be to someone who has offered less. In any case, $175 is the going rate for a used BC200XLT.

Came across a scanner in an ad (UK magazine) that I've never seen before. It's the Welz WS-1000. Features 500 Khz-100 Mhz (no gaps), AM/FM (narrow/wide), and 400 channels. What makes it unique is that the scanner is small enough to fit in the palm of your hand, or a man's shirt pocket. Sells for about $500.

Don't know anything about performance, however. If anyone has this scanner, tell us what you think about it.

>
> * SLMR 2.1a * Newt: Dfn: 1) Cool reptile 2) Crooked politician

Reminds me of the time a few years back when we had a chase involving 2

armed bank robbers. I, of course, had my handheld scanner along in the

police car and was listening to the fire and ambulance freqs. After the

perps abandoned their car, they split up. An ambulance driver called his

dispatcher to say that one of the guys was running down the street he is

on, to let the police know right away. I heard the transmission and got

a nice arrest BEFORE the police dispatch put the information out.

Brings to mind another thought, there always has been somewhat of a

debate on if it is good for the public to have scanners. I have to admit

that (of course I'm biased)that I saw and experienced many, many more times when the John Q. Public guy with a scanner did positive things than any (if any) negative ones. Anyone else have any experiences on this area?

Regards, Raymond Miller N2NJK

Several months ago, I proposed we agree to make each group deal with a different topic and I received only one follow-up post!
My suggestion was having REC.to deal with police, fire, air,and EMS, while having ALT. to deal with cellular, pager monitoring and other unusual topics.
I like your suggestion better! Some people like to exchange frequencies, while others get aggrivated at it: if only one group dealt with frequencies each user could choose to read it or not.
Having the vast majority of postings in both usegroups no longer serves any usefull purpose.

the new scanners have the CAPABILITY to receive the 870-890 and
830-850mhz ranges, they just have this feature disabled when they are
sold in the US...you can buy a scanner with these features enabled from
Canada or from the UK or you can modify them to enable this feature!!

Jack,

Do you really, really want all the HF marine channels?

Your best bet is to purchase a Code of Federal Regulations (CFR) book containing all the frequencies allocated to the Marine Radio Service.

The book you want is Title 47 part 80 to end. Title 47 is the FCC "rule book". Title 47 comes in 5 volumes. The first 4 contain rules for broadcasters, cable TV, telephones and a lot of boring stuff.

The rule section you would be interested is part 80, Stations in the maritime service, secifically Subpart H - Frequencies. This volume also contains other interesting parts.

Part 87; Aviation services
Part 90; Private land mobile radio services (police, fire, business etc).
Part 95; Personal radio services (CB, GMRS).
Part 97; Amateur radio service.

This book can be purchase from any Government Printing office book store, or call the one in DC 202-512-1800 for about 20-25 dollars.

If you can't afford the book, go to any good public library reference section and ask for the Code of Federal Regulations. The latest (Oct 95) are colored green. Oct 94 are colored gray.

Hope this helps

I was wondering if the signal amplifiers for the 400mhz and up work. If so, which are best? I assume they would probably bring in a lot of other unwanted things, but I'm trying to receive a weak station (450 mhz) that can't break squelch. It is a low powered station that is approximately 15 miles away (a county jail). I have Radio Shacks unidirectional antenna (the cheapest one) at 20'. My elevation is about 80' which is higher than the source. I'm using a Pro-2036. Also, I've read much about coax recently and is there a % per foot rule signal loss for RG58/u and others? Thanks a bunch.

For a compromise, there is also what is called the "poor mans hardline"
available from the Wireman in SC. (800)727-9473.
It is CQ-4XL with either solid center conductor or "Flexi" stranded
center conductor to go around a rotor. Call them for info. They also
have a WIREBOOK that gives good info about RF grounding, lightning
protection, etc.
Hope this helps!

>
>
>Thanks.
>

That's odd, because the FT-73R is a 440 Mhz handheld. Maybe you are overlooking the smaller "4" in front of the 44 and 45?

Maybe this is the Europe version? (sometimes they differ)

The mods include a US band plan setting, a Europe band plan, and a commercial mod that puts the radio into a semi-commercial type operation where the display displays "CH 1" etc. and the radio will tune some very wide range, but receives the ham band and a little out of it, but not far without retuning.

Check over the radio, make sure that it is a 73R, and that the display is working. These models have a thing about the displays not displaying all digits. So try pressing on the display to see if that helps.

If not, let me know. I will try and help you out.

The best way to pull in a weak signal is to get a directional antenna.
If you are considering spending money on signal amplifyers, why not
consider spending the money on a better antenna.

Not sure where you would get such an antenna. Here in the UK the
Television band is approximatly 450-850Mhz, so it would be easy
to get a TV arial to receive 450Mhz. TV arials are pretty
directional and not too expensive. I don't know what frequencies
the TV uses in your counntry but it is probably worth checking out.

Richard.

Having suffered in the past with the Icom R1, I was worried that another attempt at a truly pocket wideband scanner might not make the grade. But I am pleasantly surprised with the WS-1000. Sensitivity and selectivity with the stock antenna is equal to or better than my Yupi MVT7100.

There are a few ergonomic quirks (it's not a one-handed scanner, since most operations require holding the side function key while pressing another). The other major annoyance is that the 10 programmed scan ranges don't remember mode or frequency step. If the radio could somehow be reprogrammed for a U.S. bandplan, that would solve the problem. Still haven't heard any rumblings about this, tho.

Anyway, this is the baby in my pocket these days.

Body handling: HTML body converted to readable text

I have looked for various radio equipment at several EZPawn stores. I think they are one of the bigger chains. Yeah, stuff seems expensive, but you are almost expected to haggle. You really can get some terrific bargains there. I got to thinking about the store employees knowlege of their merchandise. As much stuff as they sell, including electronics, guns, jewelry, etc, seems like they do pretty well. After all, a body can't be an absolute expert on everything. Just my two cents worth.

Mine does ok, no complaints. The Opto products may be a bit better but I got mine cheaper. Somebody ordered it and decided they didn't want it after all so I got it at cost.

I added the hold button to mine, don't remember where I saw the mod posted, but it is capable of having one added.

My name is... (klimasewski@fccvde.enet.dec.com) wrote:
: I have a 2004 when powered up has a blank screen. If I press the reset button
: on the rear of the scanner the display returns. If I then press any key the
: display will go blank. If I don't press a key for a about 10 mintes the
: display will work normally.

: The lastest problem has been the squelch not working. The control is set
: so I should hear static but the scanner keeps on scanning.

Perhaps there is a bad ground on the board which contains the front-panel components. This could potentially cause both problems. The first place I would look is at the connector(s) which connect the front panel boards to the rest of the circuitry, are they loose, broken, etc.?

Mark L9 (markl9@aol.com) wrote:
: Big deal. So what if the PD and such use cell phones. Does everyone here
: know the ODDS of hearing a given cell call on a given cell frequency?

Yep. It's pretty damn good! Happens all the time. Also happens on movie sets when the actors pick up their phones to make a call between shots. In rural locations or even in urban locations in the wee hours it's pretty easy to find a given phone conversation.

: That
: cop over there, using his cell phone, hearing him make that call? The
: chances are greater of getting struck by a meteorite!

Better check your facts before you post such exagerations! Obviously you've never "been there/done that"! Had several experiences last week and haven't managed to collect any meteorite fragments yet!!

Sure, I'll agree that if you're in downtown Manhattan at 5 pm you may have a problem hitting any given phone call from the cell site but if if you're close enough to see someone on the phone and their mannerisms it's a lot easier to tag the caller to the call. Maybe you'll only get one side but even *thats* something...

I'm an OTR truck driver and picked up a BCT-7 about two months ago. I gotta tell ya's, I LOVE this thing. For one thing, it sure eats up some of the dead time when Art Bell hasn't got anyone worth listening to on his show. I find the extender alert to work most of the time.
I just wonder if cops have the option of having the rebroadcast signal even working. Not because of BCT-7's, but for some reason unknown.
One problem I notice (I drive exclusively in Nevada) is that if I'm close enough to hear the mobile unit's broadcast, the 'alert' signal if picked up, will blot out the 'real' signal and then I hear neither.
But when the alert sounds off, I always 'check my six' (i.e., just check speed, lane, and following traffic.

I just wanted to say that: "I Love My BCT-7".

SIGH!

It seems that every once in a while this topic comes up again and
someone inevitably suggests this ill-advised "solution." It reflects a
misunderstanding of how Usenet works and the subtleties of human group
dynamics and synchronization of distributed computer systems.

Here's a good reply I gave to someone during one of the past rounds of
this topic that should explain why this won't work:

>From: pschleck
>Path: pschleck
>Date: 18 Oct 94 17:51:01 GMT
>Message-ID: <pschleck.782502661@gonix>

>Newsgroups: rec.radio.scanner,alt.config,news.groups
>Subject: Re: ELIMINATE ALT.RADIO.SCANNER?
>References: <jim-131094113523@jimsmac.ttech.com>

In <jim-131094113523@jimsmac.ttech.com> jim@ttech.com (Jim Wayda) writes:

>Why not just have one newsgroup. Let's all band together and eliminate
>alt.radio.scanner. This can be done as follows:

>Post the following message to alt.radio.scanner and repeat the message many
>times on a daily basis:

>"If you are posting to alt.radio.scanner, please post to rec.radio.scanner
>so that we can eliminate alt.radio.scanner and have one scanner newsgroup.
>Thankyou for your cooperation."

Nope, all you will do is continue the viability of the newsgroup by
maintaining message traffic on it. Many sites decide whether or not to
carry a newsgroup by how long it's been idle (matter of fact, there is a
regular posting to news.lists that identifies such moribound
newsgroups) or on its estimated readership or measured message activity
(another news.lists posting). In addition, many will disagree (for reasons
ranging from an opinion that alt.* groups should never die, to silliness
like a reactionary resistance to doing something because "someone told them
to do it") and will defy your wishes purely out of spite.

The newsgroup alt.radio.scanner is not going to go away by turning it into an alt.radio.scanner.meta-flames.about.why.this.newsgroup.should.be.deleted. Just accept the fact that you're not going to get thousands of sites and users synchronized in any short period of time. The trend is towards moving from alt.radio.scanner to rec.radio.scanner, let's just quietly let it happen and it will happen more quickly with a minimum of fuss.

This does, however, teach a very strong lesson about taking the trouble in the future to go through a "Big-7" newsgroup creation process for a group that could potentially become quite mainstream, rather than go the easy way out by arbitrarily newgrouping an alt.* group (which has the potential to make messes like we're dealing with here now).

>I would appreciate replies and help from anyone and everyone. I am tired of
>reading two newsgroups for no valid reason!!

Then don't. Just unsubscribe from alt.radio.scanner, don't read anything on it and don't post anything on it. If enough people do that, the problem is all but solved.

It used to be, here in Los Angeles at least, that when a patrol unit requested info on a out-of-state license, they usually got the response," no wants, NCIC".
Now it seems that the same information available for in state license plates, is there for out of state cars too.

Has NCIC changed their coverage to cover more, or has the State, City whatever connected themselves up to the other states computers?

If not thru NCIC does this violate some privacy laws?

Has this been possible for awhile or did LA just find the money for it?

On a side note, I remember hearing "NCIC down" on Sunday mornings. I wonder if this has changed too.
cheers

Grove Enterprises (aka Monitoring Times) used to repair scanners. They had been advertising this for some time.
Three weeks ago I called them and they said that they had just stopped their repair service, except for Cell mods.

Now in the latest mag. they are advertising channel increases, speed enhancements, etc. NO cellular mentioned.

The ad. is also misleading, in that if you don't read it very carefully, you might think that they are still repairing scanners.

They now recommend a company called G&G. One of their advertizers.
Sorry, I don't have their #.

I think this is just another BAD indicator for the scanning hobby.

Hello Fellow Radio Enthusiasts -

I have for sale all the issues for Popular Communications from April 1983 (Vol 1, No 8) to present.

A wealth of information on radio, scanner, ham, cb, swl, etc.

Looking for a good home and someone who will appreciate them as much as I did. Sleeze-ball profit-seeking re-sellers are not welcomed...

$100.00 takes all 13 years (over 160 issues) and I'll even pay for the UPS shipping.

Serious inquiries only: chrisre@chelsea.ios.com

Sincerely,
Chris

The value of any piece of used equipment is often based on the moods of
the buyer and seller at the time of the transaction. Besides if you can
find what you want elsewhere, then that is good for you. No one ever said
that Pawn Shops are bargain shops, they exist to buy distressed merchandise
from people who need quick cash.

The customer is the ultimate arbitor of price, if no one buys the stuff
then perhaps the Pawn Broker may reconsider the pricing.

A modified pager? Good luck!

The best program I've seen is Message Tracker made by

K & L Technology
P.O. Box 460838
Garland, Texas 75046-7198

They have three programs available, depending on how fancy
you need to be. They start at about $119.00, up to $239.00.

The program is loaded into your computer and the output cable
from your computer fits into the audio jack of a scanner. It
will decode golay and pocsag 512, 1200 & 2400 baud messages,
both numeric and alpha. (They plan to have a FLEX version out soon.)

Their phone number is: 214-414-7198

Big deal. So what if the PD and such use cell phones. Does everyone here know the ODDS of hearing a given cell call on a given cell frequency? That cop over there, using his cell phone, hearing him make that call? The chances are greater of getting struck by a meteorite!

There may be a problem with alt.radio.scanner.cellular.monitor!

Since it is illegal to monitor cellular telephones, I suggest
that we have a group called alt.radio.scanner.mods or somthing
along that line. This could cover ALL modifications (Cellular
restoration isn't the only mod available for a scanner) and it
be a little more on the up and up.

P.S. I LOVE the idea of a rec.radio.scanner.freq! I'm always
looking for virgin freqs to listen to :)

> on this area?

I'm sure the police officers in my area know my by sight. I know it's not a good practice, but when there is an incident in my neighborhood, I walk outside to check it out. I do this for two reasons 1) because I'm curious and 2) because a freind of mine is usually at the scene (he's a newpaper photographer). I know I probably shoudn't be doing this, but the local police have never had a problem with it because I stay back a safe distance.

One time there was a house fire and I walked up and was talking to the officer blocking traffic. His patrol car was blocking traffic in the west bound lane and I was standing on the sidewalk. This lady ran through the orange cones and hit the officers car. The officer was lucky he wasn't hurt because he was standing infront of the car. Anyway, I gave all my information to them because I was a witness and got a summons to appear at the trial. The case never made it to court because the lady plead guilty. I looked on the summons I got and looked up the PC codes online. They where charging her with drunk driving, driving with a suspended licence and child endangerment (She had a baby in the car).

It's also been a great source of information (being at the scene) because whenever I get the chance to talk to a LEO I can ask them questions about codes and abreviation I hear over the scanner. They have always been happy to answer my questions.

I've also seen two types of headset at McDonalds. The old style which
is manufactured by Panasonic and the new one piece units manufactured
by "3M". The "3M" headsets operate in the 902-928 Mhz range in Wide
FM mode.

McDonalds in the US use the following frequencies:

McDonalds 30.8400 154.5700
31.0000 170.3050
33.1400 151.8950
* 33.1400 170.3050
33.4000 154.5400
* 33.4000 154.5700
* 35.0200 151.8950
* 35.0200 154.4900
35.0200 154.6000
151.7150 169.4450
151.7450 UNKNOWN
151.7750 171.9050
151.8650 UNKNOWN
154.5700 170.2450
154.6000 171.1050
* 457.5375 461.0875
457.5500 467.7750
457.6000 467.8250
460.8875 465.8875
461.0375 466.0375
461.0875 466.0875

From: Marty Toomajian <martytt@ix.netcom.com>
Message-ID: <31EA31C3.2192@ix.netcom.com>
Source record: 229827

To program the K100, put the radio in manual. Key in the freq you want and then push the "enter" key followed by the channel number into which you wish to enter the freq.

To program the search freqs, push "search program". Key in the freq you want for the lower search freq, push the "enter" key and then the number one key. To enter the upper freq key in the freq you want but push the number two key after enter.

To go slightly out of band you may enter freqs with a decimal point before the freq. So to program 143 MHz put the radio in manual and then key in ".143" and then hit "enter" and then the channel number into which you wish to enter the freq.

2876. PRO2004, repair tips needed

Newsgroup: rec.radio.scanner
Date: 1996-07-15 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4sdbcd$2j0@mrnews.mro.dec.com>
Source record: 229829

I have a 2004 when powered up has a blank screen. If I press the reset button on the rear of the scanner the display returns. If I then press any key the display will go blank. If I don't press a key for a about 10 mintes the display will work normally.

The lastest problem has been the squelch not working. The control is set so I should hear static but the scanner keeps on scanning.

Any tips??

thanks,
Ken

Interesting question. If you are or plan to be an enthusiast, the AOR 8000 is the most versatile handheld, but requires some time to learn to use. It is fully programmable, which is a BIG plus! Step sizes are programmable, and just about infinite. 1000 memories, true LSB/USB, etc. etc.PRICE around $600.

For a base unit, the AOR 5000 looks to be the best contender, but not much is really known about the unit as yet, and software programs are just being developed for it. Price around $2000.

For non programmable units that are easier to use, Handheld- Bearcat BC-3000, Base BC-9000. If you want unblocked units, order from Javiation in UK, the corresponding units, UBC-3000/ UBC-9000

Hope this helps. Many scanners are on the market, but if I was to get one scanner, the AR8000 would be my first choice.

: > - Henry

: What do you mean when you say an antenna "cut for the middle" for the
: military frequencies. Do you mean literally to cut the antenna in half.
: What does this do?

: Thanks in advance for your reply. I am relatively new to scanning.

I'm relatively new myself. I don't think HankBop meant to literally cut
the antenna in half. He probably meant to cut the antenna to the proper
length for the MIDDLE of the frequency range. ie middle of 118-137 band
would be approx. 127.5mhz. You wouldn't want to make an antenna that is
primarily centered on 118mhz, because reception at 137mhz would not be the
best. Also, you wouldn't want to make an antenna that is primarily centered on
137mhz, because reception at 118mhz wouldn't be the best either.

Hope I'm not restating the obvious.

Keith

Bob Parnass, AJ9S (parnass@radioman.ih.att.com) wrote:

: I reviewed the BCT10 in July 1996 Monitoring Times (current
: issue) and recommend you consider the BCT7 or another model.
: The BCT10 is fun to use but lacks a frequency display and
: is not programmable.

Do you have a review of the BCT7 available Bob? It's not a new model
but I recently purchased one and found it usefull for road travel.

A few BCT7 comments. I found I had to make several extended trips around
Wisc. and into Minn. A friend of mine is a 911 dispatcher and had bought
a BCT for a trip to Montanna. He really liked it so I went and bought
one before my trips. It's a different mind set than programming selectively
what you want into a scanner. Found it great to not do anything and get
continuous police and highway patrol through each county. I added about
a dozen itinerant freqs. for road crews, CB 19 for truckers and a couple
of other special freqs. I wanted. It sure took my mind off of lots of
driving. After the first trip I looked back through 2-3 years of Monitoring
Times and couldn't find a review. In summary this is a specialized
scanner I was hesitent about and after using it found I really liked
it. It scans fast, has enough user programable freqs. for road trips
and is easy to use. One limitation is the freq. bank selection. You
can have Highway Patrol on and the select police or DOT. If you
select fire or one of the other groups then Highway Patrol and police
are unselected. If you have special freqs. you then need to program
them into each bank. The nice think is anytime you lock out a freq.
it is locked out in all banks. You can globally remove all lockouts
by holding the lockout button for 2 seconds. The alert tone and light
for the Wisc. State Patrol extender freqs. worked, but not as expected.
Sometimes when passing a truck scale with parked patrol cars it would
go off and other times it wouldn't. Passed a radar unit and it didn't
got off and another time passed an officer out of his car ticketing or talking
to driver and it also didn't go off. Maybe other areas of the state don't
use the extender freqs. as often as they do in my area. Enough rambling
and hope you find the scanner you want.

Has anyone ever had a good experience with a pawn shop when seaching for scanner or CB equipment? I went shopping this weekend, and found Phx area pawn shops to be terribly overpriced. At one, they had an old 23 ch. CB for $50. I found the same one at a thrift store for $5. This same pawn shop had a 10ch 10 Band uniden for $99: The same price I found for a new one at Sears.

What really gets me is that they refuse to come down on price! At another pawn shop, I found a set of Realistic 3 channel handheld CBs which RadShack sells for $30 new. He had $75 on them!! When I told him that RS had them for $30, he did not believe me until he called RS. Then he lowered his price to $40!

Are these guys stupid, greedy or both? They obviously do not know the value of their radio equipment...

Sounds like you need to find a new pawn shop! We have one here in Wichita
that has about a dozen radios (uniden pro510xl's and equivalant midland
types), all in near mint condition, for $24.95 each. They even have a power
supply for you to use and they have no problem if you want to bring in your
own meter and dummy load for testing!

OTOH, there is another one that is asking $1200 for a Yaesu FT101ZD and $375
for a (new in box) htx202........

I have seen the same attitude in Los Angeles. But not just in pawn shops.
If I see a piece of used equipment, and I say that 'so and so' has it for
$x less, they ask me why I just don't buy it there!
They just don't understand.
I guess they're in it for max. profit, not max. sales. Personally I
believe in increased profit thru max. turnover.

cheers

There can be some great buys on radio equipment at pawn shops. I've found several Bearcat 200xlt's selling for around $100 each and once saw a Realistic Pro-2006 for $150 (It's now sold). Make sure you fully check them out before you buy as most pawn shops are strictly "Where is - As is".

The last time I talked to K&L, about 3 months ago, they had no plans for FLEX.
When did this change, and do you have any details?
What will the max baud rate be? How much will the software cost? Are they going to publish specs., so we can write our own software?
One of the problems I had with their previous product, was that it didn't do what I wanted.
cheers

Pawn shops make 99% of their money by charging 20% interest on money loaned on merchandise. This is 20% per MONTH!. Most of what is taken in on pawn is redeemed and the owner usually has little interest in sales of small items. Typically the pawnshop only lends 25 to 30% of market value so he has a lot of room to haggle.

Tell him Ken

I too do this all the time. I have a freq counter and this makes it very easy!
I know where 90% of the cell towers are and what freqs they are on and I have maped them out. I can follow cell calls (most of the time) by just listening to them talk. They usally tell where they are and this makes it easy to track. I dont live in a big city but it is a pretty big town.

: a very big help.

: Buddy Ladd

I would agree completly with this point.

In the UK I get the impression that the police don't like scanners.
Eg. Once when I was stopped the police man saw part of my stereo
system all lit up and said "Thats not a scanner is it". His tone
of voice sugested an attitude of oh no not one of those again.
I didn't have a scanner in the car which was probably a good thing.
When I do take my scanner in my car, I make sure I don't have any
police frequencied programmed in.

The law here on listining to the police is not very clear. As far as
I understand you are allowed to listen as long as you don't take any
action as a result of what you hear. Problem is if you happen to
stumble upon a crime scene or somthing, while you have a scanner
in the car. They could say that you were there because you heard
about the incident on the scanner, and you might have trouble
proving otherwise. Also if it came to court, would the court
accept that you were listing just out of curiocity, this is a
little uncirtain.

If this is the general attitude, then there is no way I would be
prepared to call the police to tell them about somthing I heard
on my scanner, even though in the past I have heard conversations
between people whe are obviously up to somthing very suspect.

I suspect that if there was somone you could call in these situations,
without any chance of recriminations, then far more people would be
prepared to give helpfull information. Perhaps they could set up some
type of anonomus telephone line, where you can call in and leave
information, but keep your identity a secret.

Richard.

2896. Help Which scanner BC200, BC205, Pro34, Pro43???

From: bwiencek@kcnet.com
Message-ID: <4sgib9$pid@guitar.sound.net>
Source record: 229599

Help me !

I need to decide real soon between a Uniden BC205xlt, a Uniden BC200xlt (these two are esentially the same as far as I know??) a Radio shack Pro-43 and a pro-34.

All are within $25 so price isn't a major factor, but performance is!!!
I am leaning towards the pro-43 or the 205. My major listening requirements are:

NASCAR & Racing in general
220/440 ham
police/state troopers/law enforcement/ambulance/fire
Cellular capiable
possibly the air shows that come to town too.

which one is the best choice??? I am wanting to scan between 2 frequencies (i.e. the 220 ham band range) when I set an upper & lower limit. Also I want to enter a group of frequencies (nascar 'channels') and have the scanner JUST search those frequencies.

- thanks for any insight
- Brian

> cheers

When a dispatcher says, "No wants NCIC." they mean they have checked the tag for wants in NCIC (and presumably the local computer, too), but didn't bother running the tag for registration...home state or out of state. That generally takes another transaction unless the computer system is set up to automatically run tags through the state of issue. It just depends how the computer is set up. Ours gives us the option of getting a registration or not. It cost money for each transaction, so a few thousand less inquiries a week adds up to big bucks after a while. Often times it makes no sense to get the registration, because if you are in California and you run a Georgia tag, what good will the fact that it comes back to Fred Derf in Atlanta be to the officer? If the officer wants/needs registration he can ask the dispatcher for it. He is usually more concerned if it is stolen or involved in a crime.

As for the change in procedure...that may be all it is...just a change in procedure.

NCIC has always covered the entire country, plus Mexico and Canada for certain files. Very rarely will an agency NOT have access to NCIC. Almost unheard of...

"NCIC down" means just that...the system is not responding for either routine file maintenance or an unexpected crash. Most routine maintenance is on Sunday morning since that is the time of least activity in NCIC. Unexpected crashes alway occur during the time you need it most. (Murphy's Law.)

Andy

I have come to the conclusion (after dealing with a couple of them) that they would rather keep it and try to sell it to someone who does not know the value and is willing to pay their price, than to come down on price and sell it to someone who at least has a vague idea of value based on a knowledge of the retail price.

I thought the readers of this newsgroup might be interested in the following:

A British band called "Scanner" will be playing INSIDE of the Brooklyn Bridge Anchorage on the closing night of MUSIC IN THE ANCHORAGE '96 - Saturday, July 27th. The Music in the Anchorage home page is: http://www.users.interport.net/~ctime/a_music.html and Scanner's home page is: http://www.obsolete.com/scanner/.

What is "Scanner"?

It's a guy who creates ambient music that incorporates actual intercepted radio transmissions of telephone conversations. During Scanner's live performances, they utilize live transmissions... so every performace depends on the radio traffic at the time.

I'll be there... will you? (Email me if you will be.)

Hello,

I have set up a mailing list on my Pro-2006 Home page.

Since I have had my home page up I have a few users ask for some type of mailing list. I decided to give it a try. The list is to exchange information and ask questions on the Pro-2004/5/6 and Pro2035/2042 line of scanners. This includes software, computer hardware and kits for the above units. Also to be aware of current and new products as they become available for the above scanners.

Companies may make announcements about their products as long as its DIRECTLY related to the above scanners. No other product information from companies will be posted! The purpose of the list is to exchange information and help each other out.

To join the list send email to "pro2006@ptd.net" with "join 2006" in the subject line or "quit 2006" in the subject to be removed from the list.

I dont have access to a list server so this mailing list will be runned by me. I think I have all the quirks worked out if not let me know.
I hope the list works out and we can have some fun.

Steve

That's generally the exception to the rule but of course that also depends on where you reside. My experience has been that most pawn shops try to rip the unwary public off with markups well over 500% over what they buy the item for. (I recently saw an old Commodore-64 computer with a $125 price tag on it in a local store) These types of places prey on the folks that don't know what they're buying and in most cases the shop owners don't even know what they're selling.

Know what you want and by all means shop around.

2916. Speedbird frequencies

Newsgroup: rec.radio.scanner

anyone know of frequencies used by speedbird (BA) British airways....
they now serve PHX/LGW...want the company frequencies as well as those
used by ground ops. BA uses T-4..also used by HP, CO, & WN.

WN (Southwest) is driving everyone crazy with their $25 fares...long
lines at the airport, long waits on hold for either the res center or for
a travel agent...I remember when they did this a few years ago..it made
it really cheap to fly PHX/LAX....

From reading the first article it sounds like he wants to know when
scanners can receive digital and/or analog. And crystals or not it is
still analog.

In case anyone missed it, and in case anyone really wants to read it again, here is the column that would have been in the July 1996 issue of the RCMA Scanner Journal. I thought I might post it 2 or 3 times each month in case it does slip by someone who is interested.

Andy......

July 1996

A few columns ago we discussed the Johnson County Police Academyï¿½s use of the Intercity radio system for situational training. Johnson Countyï¿½s Intercity system is multi-cast on 453.450 and 460.100. About the time my letter to Mike Redman containing that column irretrievably hit the bottom of the mail box, I discovered a new plan for the Academyï¿½s radio needs. A year or so ago, Overland Park PD abandon their UHF frequencies (460.225, 460.375 and 460.500) for an Ericsson 800 MHz trunked system. Two of them will be used by the Academy...460.375 and 460.500. Iï¿½ve already heard them on 460.375. The transmissions are simplex, so you may not hear any activity unless they are close. They often commandeer parts of Shawnee Mission Park or Heritage Park in which to play cops and robbers. I mean no disrespect when I say "play cops and robbers." It is serious business. I have dispatched for the Academy before, and even though the recruits that Iï¿½ve seen get "killed" go home to their family that night, it is an eye opening experience for those new to the business. Incidentally, 460.225 is still unclaimed. Iï¿½m going to leave it in my scanner. As far as I know it is unused, but it could become active without any notice. You just never know!
Speaking of Overland Parkï¿½s Ericsson system (856/857/858/859/860.9875), I have heard that a problem has reared its ugly head. When additional city agencies were put on it, cars started getting busy signals when trying to transmit...meaning that they had to "stand in line" to talk. Whether it is a loading problem, or trouble with the prioritization given to different fleets is unknown. I scan them regularly, and it sounds like the thing works fine. Many 5 frequency trunked systems handle more units than OP has on theirs, so weï¿½ll just wait and see. In the meantime, Iï¿½ll just keep my eye out for an OP Officer bearing a maniacal expression who is transforming his portable into tiny fragments with his night stick. That will confirm the rumors.
Bob KS-001 was cruising home and monitored KHP Topeka on 868.8625, which is licensed in Lawrence WPHB587. Only the dispatcher was heard, no mobiles. He suspected that the mobiles were on the existing low band frequency of 44.820. The signal strength in the Tonganoxie area was low, making him believe that the transmitter is not in Lawrence...perhaps west of there...or maybe they were testing it at a low power. A few days later Bob noted that the mobiles were fully repeated, though the signal strength

remained the same. He listened to troopers remark about how nice it was to have car to car capabilities over long distances. They also mentioned that some console equipment was yet to be installed.
One recent evening Bob heard a unit call a KHP mobile, but it received no reply. The KHP dispatcher keyed up and asked the unit to ID itself. It was a Douglas County deputy in Eudora "testing a new handheld" he was just issued. In his last e-mail to me, he heard the Douglas County Sheriffï¿½s dispatcher test her transmitter with KHP on 868.8625. Bob said that all this information means:
A. The system has good coverage if the site is west of Lawrence...or
B. Douglas County mobiles will have the ability to call KHP direct on 800...or
C. Douglas County dispatch will have the ability to call KHP direct on 800...or
D. Douglas County may be going 800 themselves, soon...or
E. All of the above.
I suggest that you donï¿½t wipe KHPï¿½s low band frequencies from your scanner. They still have operational equipment. Who they might communicate with is unknown, but when they do, I want to know about it. Thatï¿½s what a big part of this hobby is aboutï¿½the thrill of the hunt.
I checked the 1996 Police Call and found a newly issued NPSPAC frequency to Douglas County...866.7625 WPFT496. It has the same number of mobile licenses as the non-NPSPAC freq (852.6625 WNUT774) Douglas County has had for a while for detective use. Lawrence has a new non-NPSPAC freq of 856.7125 WPHY874. No idea what either is being used for yet.
Here in Johnson County, KHP is multi-casting dispatch on low band and the Countyï¿½s 800 system (856/857/858/859/860.9625.) Some mobiles are heard on low band, some on 800. Obviously, as troopers get new cars, they are equipped with 800 radios. During the day it is a pain to monitor them on the trunked system because of the public transit, airport, and assorted agencies clogging it up. In the evening and on mids it is great. I suppose that the low band system will die a slow, but inevitable death in the near future.
This monthï¿½s batch of NPSPAC frequencies:

Hamilton CO 866.3500
Hamilton CO 866.6250

a 6
>meter rig with sideband .

I'm afraid I disagree. I have all mode receiver, SSB etc... and cannot receive even a trace of transmission from my own AT&T 9100 900Mhz cordless. Spread Spectrim is the way to go for privacy. Even the most expensive equipment cannot monitor it. Note on range: I could simply walk outside of my home with the old 49Mhz cordless & loose the connection. With the 9100, I can get in my car, drive down the street using phone INSIDE car and continue to get good signal to about 400 - 500 ft. (straight line).

I shop at pawn stores once in awhile myself. I have found the same as you. However, on the Saturday last I went to a pawnshop I hadn't been to before. They had a lot of cb's a few scanners and a good selection of good junk. I found a Uniden 760xlt scanner on the shelf. It was dirty but the girl at the counter said it worked. I tried it in the store. It worked fine, mod and all. I got it for 60.00 dollars out the door. I think I got a steal. I have noticed that most of them don't know what they have.

I've found it takes shopping around. If you see something you like and they won't sell it for a good price, let them store it for a year. Sooner or later they will want to dump it. It costs them money to keep it on the shelves.

Good Luck.
.Don.

2924. Re: Olympic FREQ's

Newsgroup: rec.radio.scanner
Date: 1996-07-16 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <4sg6hk$mf7@HOPPER.ACM.ORG>
Source record: 229627

bradh@netime.com (Brad Herring) asked:
> I am working the Olympics, and looking for freqs for SWAT, bomb squad,
> GBI, FBI, fire/rescue, police, whatever.

The primary ACOG trunk currently includes:
935.3875 .4000 .4125 .4250
936.3875 .4000 .4125 .4250
937.3875 .4000 .4125 .4250
938.4500 .4625 .4750 .4875
939.3875 .4000 .4125 .4250 plus 938.9250 and 939.8875

A commercial trunk on 936.4375, 937.4375 and 938.5000 carries ACOG related
communications besides regular traffic and may be part of the primary trunk.
939.4500 and 939.9000 also fit in here somewhere.
ACOG also has a transportation trunk on 938.3875 .4000 .4125 .4250 & .4375.
Coca Cola Olympic City is using 937.6375 & .6500, and satellite video techs
were heard on 939.9750.

Police and Fire services are on the primary Atlanta trunk:
856.4625 .4875 (-) inactive
858.2375 .4375p .7625c .9375p (p) phone patch
859.2375c .4375 .4625 .7625- .9375 (c) control channels
860.2375- .4375 .7625 .9375

For an extensive commented list of Atlanta area frequencies, download:

Hi, I have the above scanner for sale. Has "Hyperscan" ability (about 30 channels per second), triple conversion (remarkable free from intermod and computer interference), 200 channels arranged in 10 banks of 20, cover from 30 Mhz to 900 Mhz, with some gaps, AM and NFM, no cellular.

Have the original box, manual, a set of nicads, the wall charger/power supply, and the optional vinyl case.

Will ship it out for $ 135/insured/UPS Brown.

Yes,Rat Shack can help you,I had the same problem.They will order whats
called a hardware kit,wich contains all the screws,brackets and so on the
go into the radio.I cant remeber what I paid,but it was somewhere between
5-10 bucks.

If you have any trouble with your local RS guys,let me know and I'll dig
up the baggie and get you a parts number.

Good luck.

I did a point-of-sale system for a small chain of pawn shops and I was
somewhat surprised to find that they made more on people looking for
good deals than they did from charging 30% per month in interest. In
fact they had a thriving retail operation going where they would buy
stuff from wholesalers and resell it through the pawn shop.

As a rule they don't have a good idea on the value of their stock
which is why they will usually only give you 20% or so of the value on
a pawn. There are exceptions where some dealers will specialize in a
specific area -- usually jewelry or firearms, but for the most part
they can't be experts on most of the stuff they take in on pawn.

Sounds like the microprocessor may be shot.
They may still be available from Radio Shack's national parts depot.

Mark wrote:
[snip]
: Fine. So, I exaggerated a BIT. I STILL don't understand the "big deal"
: about listening to cell calls. Oh well. To each, their own.

I didn't mean to take a poke at Mark but used his post to offer a reply to a lot of readers who don't bother to speak the opinion he expressed. His opinion is a pretty popular one among many scanner owners. The real point is that listening to cell calls isn't much different from any other aspect of the scanner hobby. Scanning is a vicarious hobby that allows a listener to get some pleasure from listening to communications which are not aimed at the listener. We're *all* eavesdroppers! Some people like to listen to fire calls. Some to police calls. Some to seismic telemetry. Some to fast food drive thrus. Our targets of choice aren't important but our freedom to choose *is*!

(tirade begins)
ONE difference is that a group of people got together and dumped a huge amount of cash into a barrel and then doled it into the pockets of our esteemed politicians via political action committees and *bought* enough votes to make it illegal for the scanner dial to move beyond some subjective boundry. Doing so made it illegal to monitor some Mom as she called the babysitter to say she would be late in picking up Jasper. On the other hand, monitoring the local FBI as they dressed in their SWAT outfits and prepared to do battle againt the foes of Western Civilization is perfectly OK.

Is something wrong with *this* picture????? You bet it is.
The problem was that we lost some freedom that day and people like Mark shrug and say, "What's the big deal? To each, they're own..."

The "big deal" is that we're all involved in the same hobby. LISTENING... We're not listening to anything that is intended for our own ears but rather for someone else's and we're just "busybody" enough to want to eavesdrop. We're all cut from the same cloth but some have different preferences for what tickles our fancy. We get some pleasure from using technology to tell us what's going on. It's a pretty silly statement for someone to say that they like to listen to police calls but don't like to listen to police communicating by cell phones!

I'm going to assume that the question that started this thread was posed as a serious question. The "big deal" about cellular monitoring is that it offers the listener an opportunity to hear some very interesting comments. Sure, there is a lot of boring stuff out there that isn't (usually) worth the time or effort. But every now and then, at the scene of some "little drama" a very interesting communication is heard.

Most of us follow the precepts of the Communications Act of 1934 and
don't act on information that we hear nor do we pass it on. We comply
not because we're afraid of arrest by the communcations police but
because we're moral, honest people. Now, the ECPA was passed and made
many of us "outlaws". Not because we commit some criminal act but because we
let out scanner dial drift above 838 Mhz. What a crock! The "big deal" is
that we've been sold out by politicians who bought a bill of goods from
the cellular lobbists. Non-technical legislators were told lies about
celluar security and the scanner manufacturers and scanner users were painted
as a bunch of whackos looking to steal secrets that could be overheard by
innocent cellular users.

Instead of asking "What's the big deal?" a better question would be:
Why make it illegal to listen to insecure phones when you have the
technology to protect 99% of the phone conversations for a few $$$?
Why create a false sense of security among phone users by telling them
that their conversations are "protected"?

Anyway, THAT's the "big deal". :)

Regards;
Ken

Unless the Federal government rescinded the law requiring the cellular bands to be blocked (and I don't think it was), the radio will not have the cellular bands.

I ran across this (as often happens on the Web) while looking for something else. It's a frequency list of repeaters used by amateur radio
operators during inclement weather, or civil emergency.

The original, with further information, is at
http://wwwcaps.uoknor.edu/~kbrews/spotfreq.html

-Carl

AMATEUR RADIO REPEATER and WEATHER SPOTTING
FREQUENCY LIST

13 June 1996 revision
!! Newly Revised Organization !!
Midwest States Ordered West-to-East by Tier
Then Northeast US/New England

Notations:
** Entries known to be preferred sources of wx info
* Entries known as good sources of wx info
> part of linked SKYWARN radio network

Ratings are based on experience or information provided by
the source of the listing. No endorsement by the University of
Oklahoma is implied.

DUP indicates offset of repeater input frequency (+/- 600 kHz)

Compiled by Keith Brewster, N0IAW
With help from Bill Bunting N5SAL (NWS, Kansas City),
Herb Stein, Doug Speheger KC5JUS (NWS OUN), Greg Stumpf (NSSL),
Sam Barricklow K5KJ, Garland, TX (sam.barricklow@DRIG.COM).

What about PCS's? They are starting to hit the market now, and one of the thing they mention in their ads (even the 30-second radio spots) is "privacy". Hmmmmmm..... Aren't regular good old cell phones just as private?

BTW, are PCS transmissions encrypted? Sure, they're digital, and the scanner user has zero chance of getting them, but is there any type of encryption on them? I would think not, or at best there would be something fairly weak, because "big brother" wants to still be assured of his ability to listen in? Does anyone know the details of the scrambling/encryption used by currently marketed PCS's.

> cheers

-- Most systems should work as our does here in Illinois. When I run a
plate, either by voice or MDT, Illinois SOS automatically polls NCIC
(National Crime Information Center), LEADS, and Secretary of State
records (DMV in some states). If the info is available I will get:

1. Vehicle license info: owner, actions on the registration, i.e.
suspended for insurance, etc...

2. Registered owner(s) DL info: suspensions/revokations, violations last
12 months, etc...

3. Stolen checks on the vehicle by VIN.

4. Wanted check on the owner(s) by name, soundex, or matching physical
information.

5. Our MDT system also allows officers to attach notes to plates and/or
specific people, i.e.. warnings to officers, etc...

I'm a dispatcher, and avid scanner listener, in Salem, NJ. When we run a tag NCIC, qv.ORI.lic/etc... we get back the registration information, and the registered owner. If the
tag, r/o, vin or any part associated with the tag is wanted, we will get the agency information that has entered it. We will send a hit confirmation request to that agency to verify that the tag/vehicle/ro is still wanted.

A year or so ago, we could only get NJ info with a querry on tag. We would then send a RQ to
the state where the tag was from and get the reg. information. Now, though, it's all one step.

> Has NCIC changed their coverage to cover more, or has the State, City

I don't think so. It's run by the FBI. They wouldn't violate any privacy laws would they?

>
> Has this been possible for awhile or did LA just find the money for it?

Don't know.

> On a side note, I remember hearing "NCIC down" on Sunday mornings. I

Classified <g>

Hope this helps. I'm not to sure how much information I'm allowed to dissemenate, that's why
I'm sort of vague on my explanation.

2942. FAQ:Alt.radio.scanner vs Rec.radio.scanner

Newsgroup: rec.radio.scanner
Date: 1996-07-16 00:00:00 UTC
From: crs1026@inforamp.net
Message-ID: <4sh7q5$igo@news.inforamp.net>
Source record: 229695
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi all,
After reading the discussion over the problem of having two
newsgroups, I went so far as to write an RFD to change the
situation....but I figured, why use a sledgehammer to
swat a fly? So here is an FAQ that I will post to both
newsgroups for the next few months. Maybe it will help change
peoples' posting habits. If not.....well, I still have the RFD :)
73
Paul

FREQUENTLY ASKED QUESTIONS (FAQ)
What is the purpose of alt.radio.scanner versus rec.radio.scanner?
Posted to: alt.radio.scanner, rec.radio.scanner

Many people have noted that there are two usenet groups for scanners:
alt.radio.scanner, and rec.radio.scanner. The names of the two groups
are identical, so it's hard to tell them apart. This FAQ is intended
to help remove the confusion,and promote a rational use of the two
newsgroups.

Question: Where did these groups come from?

Alt.radio.scanner was the original usenet newsgroup dealing with
scanner radios. In 1993, rec.radio.scanner was created, in recognition
that scanner radio is a serious hobby and deserves its own place in
the ''big seven' newsgroup hierarchy. At the time, it was expected
that discussion would migrate to the rec. newsgroup, and the alt.
group would disappear. Unfortunately, this hasn't happened, and both
groups remain active.

Question: Why doesn't someone just eliminate alt.radio.scanner?

Unlike the 'big seven' newsgroup hierarchies, the alt. hierarchy does
not have an official mechanism for removing newsgroups. Typically,
alt. groups only disappear when news administrators note that they are
not being used. Even then, there are people who delight in trying to
revive alt. groups. So long as people continue to use it, most news
administrators will retain alt.radio.scanner, even if it makes no
logical sense to have a duplicate newsgroup. There is simply no way to
force users to move to a single rec. newsgroup.

Question: So what is appropriate for each group?

There is no official answer, but a good guideline would be, USE THE
REC. NEWSGROUP EXCLUSIVELY unless the topicwould be excessively

controversial or risque in a "conventional" big-seven newsgroup. Radio is pretty tame stuff by usenet standards, so this guideline may seem trivial. However, in some countries it's illegal to posess or modify radio equipment for certain frequencies, or to actually monitor or divulge some types of radio transmissions (like cellphones, hint, hint). Some news administrators are uncomfortable carrying newsgroups whose content is illegal in that locale. So it might be helpful to keep this kind of discussion in the alt. hierarchy where there is a wider latitude given to content.

Question: Is cross-posting appropriate?

No one can prevent it. But it does inconvenience those who pay by the unit for their connect time, and it wastes bandwidth, so ultimately it harms us all. If all users post to the two newsgroups in a consistent manner, cross-posting will not increase your audience.

Question: Is putting everything in one rec. newsgroup the best way to manage discussion?

Good question. To this point, no one has formally submitted a proposal to subdivide rec.radio.scanner. However, the rules of usenet do allow individuals to submit proposals, to be voted on by all users. If you want more information on how to do this, please refer to "How to Create a New Usenet Newsgroup" and "How to Format and Submit a New Group Proposal", available in news.announce.newgroups.

Comments and suggested revisions to this FAQ are welcomed.

2943. Interactive Mode for AR8000

Newsgroup: rec.radio.scanner
Date: 1996-07-16 00:00:00 UTC
From: Shayn Raney <navajo@bayarea.net>
Message-ID: <31EBA0CB.4334@bayarea.net>
Source record: 229696

Does anyone have a listing of the commands to use the AR8k in interactive mode with a computer interface? I heard there is a listing that comes with the AOR Computer interface, but a slight problem, I have the Opto version with no listings..

I've also sceen the 'AR8000 FAQ' on how to set up dumps, this seems to cover only a very tiny fraction of the commands supported by the AR8000

Currently, I am tring to write a few small applications for the AR8K. I have downloading and uploading banks down.. and now id like to work on the interaactive mode.
Any help would be better than what i have now.

- Shayn (aka Navajo)

The main thing to remember is that PAWN SHOPS ARE FOR LOSERS!!!
When you walk in the the door they assume that you are a LOSER too. Most of the stuff in a pawn shop is a LOSER'S former belongings, so be careful and check everything before you buy. Take it home in a sealed plastic bag so you don't inherit a LOSER's cockroach family. I realize there is a legitimate need for pawn shops --- the LOSERS of the world need banking services too. I have had much better luck at thrift stores.

No, no, no!!! ... you are SO wrong. Why don't you read the
Radiocommunication Agency leaflet RA169 and find out that you are
totally and utterly misguided. It is a popular misconception that
people can listen as long as they don't pass on info. It's wrong, and
illegal.

The law is as clear as crystal. RA169 leaflet states that it IS illegal
to listen to the communications of the Police and other emergency
services.

> understand you are allowed to listen as long as you don't take any
> action as a result of what you hear. Problem is if you happen to stumble

> on the scanner, and you might have trouble proving otherwise. Also if it
> came to court, would the court accept that you were listing just out of
> curiocity, this is a little uncirtain.

No. If the Police catch you with a scanner, with unauthorised freqs in
it, then the chances are you might be nicked or have it confiscated.
The magistrates WOULD punish you because it is clearly explained that
listening is an offence, punishable with confiscation of equipment, 5000
quid fine and possibly jail.

PCS uses one of two technologies: either TDMA (Time Division Multiple Access)
or CDMA (Code Division Multiple Access, aka 'spread spectrum').
Both are digital and therefore are open to encryption using digital techniques.
I am deeply familiar with the TDMA technique and only lightly familiar with the
CDMA technique.
TDMA for PCS is very similar in nature (differs in frequencies and channel
assignments) with the cellular IS-136 standard (which was derived from the
IS-54B cellular standard). Standard analog (FM) cellular conforms to the RS-553
standard.
The CDMA 'PCS' service shares heritage with the cellular IS-95 standard.
FYI, 'IS' stnds for Interim Standard and 'RS' stands for Recommended Standard
as set forth by EIA/CTIA (Electronics

The TDMA (IS-136/IS-54B) standard specifies a 64 bit value called the A-key.
This A-key is used for both encryption and for authentication. Authentication
is when you place a call and the switch 'challanges' you (your phone) and the
phone comes back (hopefully) with the properly calculated response (your phone
doesn't just sent the A-key blindly).
64 binary digits (bits) gives you the possibility of 18.44 times 10 to the 18th power
possibilities. If you can guess the A-key then you can decrypt the digital transmission.
Good luck.

Regards, Jim

What the dispatcher means when saying "No wants NCIC." Means that the tag isn't wanted for anything, but they haven't run the inquiriy for the registration. Depending on the local computer system, the dispatcher may have to run an additional inquiry for out of state registration.

They probably don't bother running lots of out of state tags for registration because:

****

I have had considerable experience with Pawn Shops. There are two classes of pawn shops, satellites of large chains, e.g., Cash America, and there are independent shops. Independent shops are locally owned and are usually capable of being realistic. The owner is usually in the shop once daily. The owner will usually deal. The large chain stores usually have a limited variance for prices and policies. I have stopped my shopping at the large chain stores. When I did shop at them, I found that there was a manager on duty at all times. Only the manager had authority to adjust prices in a significant manner. Strongly recommend that you call the shops in the Yellow Pages and identify the independent (locally owned) shops. If you want a particular item, call them once weekly. A useful guide for pricing is that the pawned item should NEVER cost more than half of the new price. Half of new price is a starting point. If they insist on half of new price or more, forget it as it is false economy to buy it. You should buy it new at a discount store or through a discount mail order house. Money back guarantees are also very desirable. Remember that the economy is poor and you can operate on the premis that nobody has any money. You may be the only customer that considers an item during a period of several weeks.

I have always been treated well at independent pawn shops and I can't enough good things about them.

Due to an unexpected emergency, I am forced to sell my scanner (less than 8 hours use). The cellular mods have been performed and the unit is flawless.

I also have ScanCat Gold software for sale.

I will accept a m.o. for $350 for the scanner (upon receipt I will ship).

I will accept a m.o. for $50 for the software (upon receipt I will ship).

Minneapolis, Minnesota area.

No C.O.Ds.

Please contact me by e-mail at rolson@innovsoftd.com or robbin.olson@deltec.com.

Please stop posting all of this crap to our board. Take it somewhere
else, start your own newsgroup, name it
rec.radio.snanner.flame.eachother. I don't care. But I'm getting really
tired of opening up this area, only to see every thread started out with
the name Bill Cheek, or John Mackey, or anyone else, with a subject line
about Bill Cheek. I'm venturing a guss that the only people that give a
crap about any of this are you three, and a handfull of others.
It's getting very ridiculous, and I don't care who started it, what
anyone did, it's up to all of you to end it. Haven't you realized yet
that you're all acting like fourth graders, calling each other names, and
saying "But he started it". Let it go, and maybe, just maybe you can all
once again become active members in this newsgroup, instead of putting all
of your energy into flaming each other for everyone to see. Well, that's
about it, hopefully you have all gained a little insight into the
situation, but the way you've been acting, I really tend to doubt it.
I'm not trying to flame anyone in this message, I'm simply trying to
get them to stop. I will not respond anymore to anything regarding the
afforementioned, unless the war is over.

It is only illegal (so far) to monitor cellular
phones in the United States. What about the people in other
countries who will not/should not be censored by the U.S.
Government's regulations?

I personally am against promoting unlawful
activities, but we also have to remember that this is an
international forum and imposing our laws onto another
culture is morally reprehensible, not to mention rude and
quite unpopular.

>Thanks in advance

>Jim Christensen (N0EXP)

I have the 2006 and the 456 - I love it. don't know about the
other.....most people seem to be big on the PROBE software....I have
the latest windows version of the Scan Star....and have no major
problems (there is this annoying bug that sometimes when you start the
program, it shows channels locked out, when it has actually reset the
lockout list......but if you set everything up good, a few mouse
clicks and you are back!)

It was very easy to install in the scanner. Took about 20 minutes.

And after I used this contraption for just a little while....I don't
know how I got along without it. It's just that much easier to operate
the scanner....and the windows version of scanstar has this nifty
floating bar that is "always on top" so you can pause, lockout, exit,
and resume scanning" with the program minimized.

like now - I can keep this window open, and control the scanner with
just a click - and the little popup shows the frequency, name, and any
sub audible tones....

I am curious as to how well PROBE works.....as so many people like
it...I may have to get the trial version and see.....

hello radioheads,

i am looking for someone, or a company, that has DDI info and possible a product(board).

from what i gather so far, all you need is a scanner audio output, and a DDI to interface between the scanner and PC. can someone help me here..is this correct.

also, does anyone know what is necessary to modify a Radio Shack Pro-39 to receive all frequencies. i heard before i have to remove D6. is this accurate.

thanks....

steve

Source record: 229788

: I think I lot has to do with the fact that it is illegal to listen
: to cell phones. When it wasn't illegal, it was never a big issue.
: As with most things, it doesn't got popular until the government
: doesn't let you do it.

: People simply enjoy doing illegal activities (that they really
: can never get caught doing).

This isn't necessarily so. Here in the UK is is not ilegal to listen to cell phones, it is just ilegal to act on information received by listening to them. Probably an out of date law.

I still like to listen to phones, although at home I don't pick up many cell phones, mosly peoples cordless phones. Some of the cordless tellephone conversations go on for a long time, the other day I was listening to somone for about an hour. I won't mention any details, as that may bee seen as acting on information and I don't want to break the law. But long conversations can be interesting, rather like watching a soap opera, but real life.

Often when friends see my scanner they often say why don't you switch it on and try and pick up some telephones. People seem to be fascinated by listening in on conversations. Perhaps people are just nosey. So people on cordless and celular phones better avoid going into anything personal, they never know whether anyone is listening.

I have a cordless phone that could be easily picked up by a scanner, and I don't worry about people listening. If I wanted to say anything personal I would switch over to my other phone. You never know who is listening.

It is also interesting to note that most cordless phone base units transmit at a frequency just above the medium wave band. If you have an non-digital medium wave radio, particularly one that is out of adjustment you can often tune it on to some of these frequencies. So you don't even need a scanner to listen to cordless phones. This would also have the advantage of being easier to hear both sides of the conversation.

Richard.

> I am looking for a case screw for a PRO43 ....

The Service Manual lists this as "Screw, 2.6x25 Panhead Machine BLK (Zn)"
with manufacturer's part nbr "PM2.6x25BLK(Zn)". In the mechanical parts
list it's Ref.No. 20.
You can go through a store salesman, or call Tandy National Parts yourself
at (800) 442-2425. Give them the catalog nbr of the PRO-43 (#20-300) and a
description of the part. Minimum order is $5, so pick up a service manual at
the same time. They take plastic, deliver promptly, and are the best run
division in Tandy (which may be damning with faint praise).

Hello,

my name is Michael Martinsson. I'm currently doing a project for my university (I'm a student). I'm going to build a radiolink for data transfer. The data are going to be transfered from a mobile plattform about 500-1000 metres from the University. I think the best frequency for me to use is in the band 432-440 MHz. What I want is some ideas about the construction or some good books or links about this kind of construction. The University wants a proposal for one professional solution and an investigation about how to build it ourselves.

I hope someone can help me

Best Regards

// Michael

You should be able to get RG6 free or very cheap from your local cable
TV company. Call them and ask if they have any end-of-reel pieces. They use
tons of it wiring cable to people's houses, and lots of short runs end up
in the trash/recycle bin.

AN>fine. Wichita KS has a trunked system...Ellis County KS...etc... that all
AN>work just fine. I guess they don't know their stuff.

San Rafael CA had one and went back to lo-band.

Santa Clara (city) has one and when they "borrow" San Jose helicopter
they have to talk through dispatchers.

Alameda County has one with enormous "holes" in it. You can hear the
users ask permission to use certain roads that have no radio coverage.
They are trying to sucker Fremont into joining the system and make
them pay for fixing the holes.

Livermore has trouble when the fog gets heavy. They lost a $7 million
law suit due to lack of radio coverage when doing a car chase. They

continued the chase in the next town over (Tracy) where their system doesn't work [the old one did but they forgot]. Let's put it this way: "The hostage died."

Ask any ham what radio he would use if he was stranded and needed to get a message out. I bet it wouldn't be 1.2Gig. The lower freqs have more range. The only advantage to 800MHZ is in extreme urban areas where you need to transmit through sky scrapers.

You wouldn't happen to make money by selling high priced 800 MHZ trunked systems.

Isn't that in the Ham band where they stuff repeater links. I don't believe
your application would be legal there. Why not use the free-for-all
(literally) 902 to 928 MHZ band. For the distance you are talking about,
that should be no problem. You can get commercially availalbe
small yagi antennas in this band to minimize interference and lower the
transmitter power requirements.

If the data link is unidirectional, you could probably get a GMSK modem
to work. Check out a company called MX-COM in (I believe) North Carolina.
They make the chips and have an ap note on such a system.

It may be tempting to use off-the-shelf computer modems, but you need
to do "hand-shaking" that generally requires a bi-directional system.

Message-ID: <19960717214112.aaaa002c1@babyblue.cs.yale.edu>
Source record: 229649

Does anyone have a freq list for this airshow to get me started. Also, do there appear to be any problems with bringing computers and or scanners onto the base?

I've been to this airshow once before, but with the local Cable TV company to do a public access show. It was the year that one of the kids of a base resident rammed one of the Thunderbirds. We were given a military escort and ordered not to point our cameras towards the crippled plane, or face expulsion from the base. They kept a close eye on us.

My question is do they frown on bringing hi-tech gadgets on base?

I understand the Blue Angels will be there, anyone have the freqs. they are using THIS year?

Last year i bought discone antenna from radio shack. I put it up on my roof on a 10 foot mast and grounded it like i was told to do. how come i can pick up more on my 3 foot telescoping antenna than the discone? i cant pick up any cordless phones with it, and somtimes when i hook up the discone the clear frequency i was hearing on the three foot antenna gets worse! I have noticed i can pick up Ham radio better though. Is it because the coax is so long(0ver 50 feet) or maybe its because the coax is bent at a ninety degree angle to get it in my house. I dont know would , someone answer this for me if they know. Thanks

I've found it doesn't matter if a pawn shop is national or local.
What matters is how dumb the manager is who prices equipment.

I've bought a PRO-2006 scanner for $250, a PRO-43 scanner for $175,
and my latest jewel is a T1000XE laptop for $19 (manager thought it
was broke, battery just needed charging).

Of course, most of the time, most items are ridiculously priced.

Dumb goes both ways. I saw a IBM XT for sale for $400 the other day.

We have a web site for the hamfest....see below

http://home.aol.com/doug03

Well.... if you get this and still need more info let me know.

Don't forget the FIFTH ANNUAL USF "Last Minute" HAMFEST
Sat July 27th 9am to 3pm
in the ice cold air conditioning...

Hosted by the University of South Florida Radio and Electronics Club.

Admission $3.75
1st swap table $10 including ticket. Additional tables $10 each.
Call 1st for table reservations.
Call especially if you need more than 7 tables.
---
call (813) 979-0033 after 5pm

USF is easily located on Fletcher Ave between I-75 and I-275 in Tampa.
Enter campus on North Palm Dr. follow the signs to the
USF Special Events Center.

Just close enough to Busch Gardens to let the family go there while you play!

TESTING WILL TAKE PLACE AT 11AM.

TALK IN 147.24+, 146.94-,and 442.275+
Vendors may setup FRI NIGHT 6-9pm and SAT MORN 8-9am.

SEE YOU THERE!!!!

for more info, direct questions to: douglass@eng.usf.edu
See our web page for more information and maps.

Hi all,

>Just got the latest Grove catalogue yesterday. They state: "...
>continuous 100 KHz - 1999.999 Mhz coverage (less cellular) in precise 10

According to the ICOM specs I received today the frequency coverage is
0.10000 - 1999.99999 for Europe except France
0.10000 - 87.50000 and 108.00000 - 1999.99999 for France
0.10000 - 823.99999 and 849.00001 - 868.99999 and 894.00001 -
1999.99999 in the U.S.A.

The (advised, or how do you call that?) price in the Netherlands will
be HFL 5052,50. The receiver will be available in August.

Cheers,

Bob

3000. Cell antenna work on scanner?

Newsgroup: rec.radio.scanner
Date: 1996-07-17 00:00:00 UTC
From: ukfan1a@aol.com
Message-ID: <4sjdvs$ptt@newsbf02.news.aol.com>
Source record: 229668

I have a Pro-46, and a Pro-50.

I've seen all kinds of people post antenna ideas in here. Some even hooked up their unused TV antennaes to the scanners.

I have a cellular phone antennae (the ones that sit on the roof of your car, with the little twist in the middle) and it seems to hook up ok. Has anyone tried this?

There is a story that has been reported many times in the magazines,
that a UK police operator broadcast a message to the effect that a
UFO had been seen in a field nearby. When several scanner users
turned up to have a look, they were arrested for listening to police
transmissions illegally.
I was apparently a trap. I don't know if the story is true, but it
has been repeated often over the last couple of years.

Cheers,,,,,,Jack.

Mike,

Do you mean trunking? The only agencies I know that use frequency hopping technology is the US government/Military.

Is Miami and Miami Beach still using Motorola analog? I know a few tricks for that format.

Finally, if you know what system Dade is using, that ay be of help.

I am willing to trade any of the following for a high end scanner,
AR3000A, AR2700, PRO-2035 with OS-535 or PRO-2006 with OS-456 or CE-232
interfaces.

Ten Tec Corsair II station, power supply, 1.8 filter, mic, manuals, near
mint.

Argosy Model 525 station, power supply, manuals, filters, options.

Let me know what you got and we'll work out a trade.....

That would probably be my exact solution, unless you need hand held for some reason. The 2042 and the OS535
with Probe make pretty much the ultimate computer controlled scanner. (Yes, I know the Icom's are technically
better "receivers" but the average scanner nut will be quite happy with the performance of the 2042).

Hi

Let me add My 2 cents worth.

I bought a discone, owned it for 2 hours and brought it back. I live in a metro area, and without a doubt
it is 2 darned broad and 2 much gain.. If you live out in the country away from Big Signal sources, no
problem, I was using 119.375 a ATIS station right across the bay for a test signal. I assembled the antenna,
hooked it up and got nothing, nada, zippo ! I disconnected it and began receiving the station on the tip of
the PL-259 connector.. Its a great antenna, but won't work very well in the metro areas.

How can you copyright a frequency? If someone asks me for a frequency
and I look in your scanner master and tell them, I dont see how that
could be a copyright violation.
Now if I scanned your book and uploaded it as a binary file to the
newsgroup, that would be a violation.

HH>wonder if this has changed too.
HH> cheers

My non-professional understanding is NCIC stand for something like
National Crime Info Clearing house. [I have a book with the exact meaning
but not with me.] It is full of scuttle butt and inaccuracies. If you
get in it, your can never leave! At least that what the author claimed.

The scanner club I'm a member of got a demo of a police MDT. They
enter the number and a California state computer (DMV I assume) gives
back the info. There are other computers that monitor the plates
the PD run and if the guy is wanted, the local PD will get a call. The
officer explained that after one plate was run they got a call from
some other law enforcement agency asking the location of this individual.
He as a sex registrant who forgot to register his location. [The honor
system scheme they use does require honor.]

I have seen posting in alt.law-enforcement where somebody discovers a
phone number and password to NCIC dial-ups. I personally don't believe
the local police have the time to dial up for every stop, and the
DMV computer has some sort of link to NCIC.

This list is at 6 years old, but here goes:

USAF/USN SATCOMM CHANNELS V.3. 1990
Compiled By Nigel Ballard
28 Maxwell Road,
Winton, Bournemouth,
Dorset, BH9 1DL.

THE FOLLOWING IS A LIST OF KNOWN USA/USAF FLEETSATCOM
DOWNLINK TRANSPONDERS,KNOWN TO USE FM VOICE IN THE CLEAR.

FREQUENCY CHANNEL NAME/NUMBER STATIONS HEARD CALLING

261.4500 BRAVO YANKEE CH 01 'CAPE RADIO TO STINKER ONE CHARLIE'
261.4750 BRAVO YANKEE CH 02 dvp traffic
261.5000 BRAVO YANKEE CH 03 'ANDY ONE' and 'BLUE FALCON'
261.5250 BRAVO YANKEE CH 04
261.5500 BRAVO YANKEE CH 05 'DRAGON EOC TO EIGHT ALPHA''STATE OPS'
261.5750 BRAVO YANKEE CH 06 'CALLING FORMAT'
261.6000 BRAVO YANKEE CH 07 'TANGO EIGHT IN THE PLANE TO ROMEO 4'
261.6250 BRAVO YANKEE CH 08
261.6500 BRAVO YANKEE CH 09 'STATION FOUR THIS IS STATION THREE'
261.6750 BRAVO YANKEE CH 10 'DRAGON EOC TO KILO TWENTY-TWO ALPHA'
261.7000 BRAVO YANKEE CH 11
261.7250 BRAVO YANKEE CH 12 'TAILPIPE CHARLIE THREE IN THE CLEAR'
261.7500 BRAVO YANKEE CH 13 'WATERLOO THIS IS FORMAT''TAC COMMAND'

261.7750 BRAVO YANKEE CH 14
261.8000 BRAVO YANKEE CH 15 'CALLING BIG TOP'
261.8250 BRAVO YANKEE CH 16 'LOOKIE-LOOKIE THIS IS OUTWAY 25'
261.8500 BRAVO YANKEE CH 17
261.8750 BRAVO YANKEE CH 18
261.9000 BRAVO YANKEE CH 19 'DRAGON EOC'
261.9250 BRAVO YANKEE CH 20 dvp traffic
261.9500 BRAVO YANKEE CH 21

265.2500 FLEET RELAY WHISKEY CH 08
265.3500 FLEET RELAY ALPHA/XRAY CH 08
265.4500 FLEET RELAY BRAVO/YANKEE CH 08
265.5500 FLEET RELAY CHARLIE/ZULU CH 08

266.8500 FLEET RELAY ALPHA CH 09 dvp traffic
266.9500 FLEET RELAY BRAVO CH 09
267.0500 FLEET RELAY CHARLIE CH 09
268.2500 FLEET RELAY ALPHA CH 10
268.3500 FLEET RELAY BRAVO CH 10
268.4500 FLEET RELAY CHARLIE CH 10 dvp traffic
269.7500 FLEET RELAY ALPHA CH 11
269.8500 FLEET RELAY BRAVO CH 11 'FOREIGN VOICE TELEPHONE LINKS'
269.9500 FLEET RELAY CHARLIE CH 11 'HAMBURG TAC CONTROL TO HARDTOOTH'

262.2000 USED IN PLAIN SPEECH DURING THE BUSH 89 VISIT TO THE UK.

TAC = TACTICAL AIR COMMAND
DVP = DIGITAL VOICE PROTECTION. This is now an increasingly common way to
allow voice amnd data traffic to be passed with reasonable short-term security.

If you can track down the originator of this list, please send me a new
one.

I try to scan these occasionally because I hate to see a scanner not
scanning something. I never heard anything until yesterday at 11:30PM
PST. I heard a beacon on 266.9625 which isn't even on the list. It broke
the squelch and kept beeping. When the squelch cut in again, I turned it
down and listened until it faded away. No voice, just the beacon. I
just have a 2 meter beam that I aimed to the south. Its gain at 260 should
be poor, but if thats all you got....

These are circularly polarized (I don't know the direction), and would
be best received with a helical antenna. I think there was a Popular
Communications article on how to do this. I think two yagi or LPDA at
90 degrees to each other would be a better scheme. Since a line amp
would be a good idea, you could buffer each antenna first then sum
them. [A delay line is also needed.] This kind of antenna is used
by hams on Oscar. I think the polorization direction can be changed
by swapping the delay line position.

Gary

>>What do you mean when you say an antenna "cut for the middle" for the military frequencies. Do you mean literally to cut the antenna in half. What does this do?<<

What I meant was I took the RS antenna and cut the vertical and three radials down to 11" each based on the formula for a groundplane: Length (inches) = 2808/frequency(MHz). It's optimized for 255MHz, not exactly the middle of the Mil Air bands (225-400) like I posted. I wanted it to be toward the lower section of that range so I could still pick up general aviation freqs decently. Hope this helps.

From what I've heard, there are rumors that this scanner is going to be replaced with a better updated version, which would account for the $210 price, which I have also been quoted over the phone (actually it was $209). They told me this price was good for as long as supplies last, which made me a little leery about it. I'm almost thinking about getting it at that price just to test it out, then sending it back, because it's hard to pass up if I might like the scanner.

I'm NOT a dispatcher, so I'll be a bit more liberal.

Yes, NCIC, as well as most similar state computer data bases, are
taken down for roughly 3-4 hours early every Sunday mornings to run
what is called a "condense", which as us hackers can figure out, is

simply defraging the damn hard drive (again). (g)

You're probably right...NCIC stands for National Crime Information Center (or something close, I sometimes forget what acronyms alway stand for) and SCIC is probably State Crime...etc. Here in Kansas City we have ALERT, which is the local computer, and NCIC. So, you might hear "nothing in NCIC or Alert."

Just a note in defense of Grove Enterprises. I have been repairing scanners for 22 years and was fortunate enough to acquire a large supply of scanner parts from Regency and Bearcat when both companies sold out to Uniden. Parts, especially for the early Bearcat and Regency units were often custom made and sources for parts are almost non-existant. Grove, like any repair facility, is limited to parts available and when they are not available from the manufacturer, or any other source, the unit is not repairable.

Knowing Bob Grove, I am confident that Groves decision stemmed from his inability to give the best possible repair service in this endeavor. When it comes to business, Bob is a leader and symbolizes how other dealers should operate. He is in touch with his customers and bases his decisions on his ability to deliver. I know a lot of other dealers, myself included, that wish they had the ambition, resources, and wealth of knowledge that he has brought to the radio industry.

Secondly, a correction to the posting. I do not advertise in any dealer magazines, although I have many magazines that have done articles on my scanner service shop and I have written many articles on repair and conversions. I feel customer satisfaction is the best form of advertisement. If you would like to receive a flyer on my scanner and repair services, simply e-mail me with your address.

Happy scanning...

3033. Do i need 50ohm coax?

Newsgroup: rec.radio.scanner
Date: 1996-07-17 00:00:00 UTC
From: h2obug@communique.net
Message-ID: <31ED499C.2D05@communique.net>
Source record: 229727
Cross-posted to: rec.radio.scanner,rec.radio.amateur.antenna

I was under the impression that a 50ohm coax (rg-8 or rg-58)is needed for best reception on my scanner using a roof top antenna. But along comes a handy little grove catalog, and inside it they say, quote:

"At vhf/uhf frequencies, common cb-type rg-58/U wiill actually absorb signals. We recommend low loss rg-6.....

For lowest loss, use Belden 9913 or rg-11/U mini.

Dont be concerned with impedance, although your scanner is designed to wrk with 50ohm cable, no antenna made maintains a constant impedance over the wide frequency range of modern scanners. What you want is low loss and 100%(or close to it) shielding." Unquote.

So which is right. Do I need 50ohm cable or not? Or should I just say to hell with it and get the belden 9913.

Vince

Brian,
Given all your needs I would go with the Pro-43. You have Air Freqs. with the Pro-43. THE others are good scanners. (I have the BC200xlt, and a Pro39 as well as the Pro43) but the Pro43 offers the most "bang for the buck".

Views expressed are only the truth... not to be confused with the facts.

Hi No-Name,
You can try this but it don't work on all of them...
Let me know if it works.

KEYBOARD ONLY MODIFICATION!!!!
---

1. Peass and hold {2} & {9} & {LOCKOUT}} & turn ate radio on.
2. Step to channel 23 to display 888.960 MHz (a factory test frequency)
3. Press {UP} or {DOWN} search arrow to scan the band.
You may store up to 10 active frequencies by pressing {MONITOR}.

TO STORE A SELECTED FREQUENCY FOR SCANNING (SEARCH STARTING POINT)
---

1. Step to the Monitor channel you wish to store.
2. Press {PROGRAM} & the desired memory channel number.
3. Press {PROGRAM}, {MONITOR} {ENTER}

That's it, let me know if it works. This mod came out of "Radio Teck Mods".

Good luck,
Boyd

Well, Grove is doing everyone a great service in recommending G & G.
I use Gerry at G& G exclusively for all my repair needs, and in my
opinion, there is none better. His work is excellent, prices are
fair, and he stands by all his work. He is a small operation, so the
turn around time is a bit slow, but this is good, as it's NOT an
assembly line, rush-rush operation.

There's no reason you couldn't, although you want to keep any added
cableing as short as possible internally, use shielded RF cable if
possible, and ground the shield, as well as the BNC itself.

Also be cautious of routing the internal cable near any (digital)
IC's.

Good Luck

Almost anything and everything if you have the right reciever.
surprisingly liottle of the military coms are coded or encrypted, and
most can be heard with any decent base scanner and antenna, although
much of the coms (especially long range and field operations) are in
the SW bands. Monitoring times traditionally does a good job of
pointing in the right direction for where and when to listen, and how
to know what you're hearing. Given your location, you should be able
to hear military or psuedo-military (CG, DEA, etc.) anytime you want.

You should be able to hear virtually anything in your area, given an
appropriate radio and antenna. much of the activety is in the SW
bands, and much of the activety, regardless of band, is "in the clear"
(un-scrambled). Pick up a copy of Monitoring Times, they do a good
job of showing where to listen, and what you're hearing. you will
also be able to hear a lot of psuedo-military in your area (CG, DEA,
etc.).

Brian-

Thanks for posting this address! I had just about given up on the thing because the software was not working
very well for me... I'll keep an eye on it for updates.

Best of luck!

Ken

I canceled AOL because for one thing, they are slooooow. They have so much graphics that it gets in the way. They don`t compress this stuff, so it drags your system down. They also have not kept up with modernizing their baud rates, a lot of the access number won`t go above 9600. Also, you just simply do not have the kind of resources available to you on AOL that you do on the internet ! AOL is a kind of service that has "had it`s day", like BBS`s. Obsolete technology must fall by the wayside.....

You can't restore what does not exist. If the scanner did not have the ability to receive 200 Mhz etc. in the first place, you can't add it. The reason that cellular can often be restored is that the unit was built with the ability and then had it "crippled." You're basically out of luck.

Well, for the radio linkup, you could use amateur radio packet, Mike. This would be very advantageous , since some of the Amateur packet TNC (Terminal Node Controllers) Now even employ data compression! A few even allow for direct TCP/IP connection! (Kantronics). Also, compared to most of the commercial units that would do this job, the Amateur units are relatively cheap -- (in the 300-400 dollar range). Used units can be had even cheaper, and they don`t wear out. Also, with most of the amateur units, you can use just about any terminal program that you would use on the phone lines, so no need to buy software. This scheme should work out admirably for you

If the one that "came with it" is the usual 9" rubber duck, almost
anything you do will be an improvement.

Some options, in ascending order of expense and difficulty:

- An extendable whip with attached BNC
- A whip intended for auto applications, cabled, may need to change
connector. can be remotely mounted.
-An external, mounted antenna with full-blown mast, cableing, etc.

In any event: Higher is better
Use the antenna length to match the frequencies

are most interested in.

>
> Thanks.

Jim,

I would be really surprised if your conclusion about the discone is true. Did you feed it with coax, if so, did you put the connectors on yourself, or did you use a prepared cable from Radio Shack? How long was the run of the cable? Was the cable/connector tested for shorts? There is no coil in the discone, to my knowledge. Try a continuity tester on the shield to the center conductor of the scanner side of the coax (with the scanner disconnected). From what is described, it sounds like something is wrong either in the discone or the feedline. If you have a ham buddy, have him bring over a two meter transceiver and check the SWR. If very high, there is definitely a problem in the antenna (short) or feedline.
Let me know your results. Good luck!

>keg@internetmci.com

Jason,

This means REPEATER inputs and outputs. On the output of the repeater, you will hear both the Base(dispatcher) and the mobiles. On the input, you hear only the mobiles. The repeater acts as a receiver and takes the transmissions from the mobiles on the input channel and re-broadcasts them to all users on the output channel.

Frequency pairs vary based on band used:

In the VHF Range, the inputs and outputs can be almost any frequency, however there are certain "mobile only" frequencies mandated by the FCC. On UHF (450-470) range, the inputs are 5 Mhz higher than the Outputs. For UHF-T (470-512), the difference is 3 Mhz. and for 800 Mhz, the input frequencies are 45 Mhz LOWER than the outputs.

For example, a UHF Repeater operates on 453.50 Output frequency, the mobiles' Input frequency will be 458.50. To receive both sides of the transmission, you must tune to the Ouput (453.50).

The freq. plan for the mobile would be:

Transmit 458.50
Receive 453.50

However, the frequency for the Repeater will be:

Transmit 453.50
Receive 458.50

Hope this simplified explaination is helpful.

Joe

>Folks,

>My area public service agencies are moving to 800mhz trunked system. I
>have a scanner capable of reaching those frequencies.. but don't know
>where to begin as far as listening to them or finding out what they are.

Try a simple approach first - Radio Shack's Police Call should give
you the frequencies of all the licensed freqs. Place all frequencies
in a separate bank in your radio. You will have to wait until the
system goes online to find out how many of the licensed freqs are
actually used. Make a log of freqs used and service. There may be more
than one system in use and that can help nail down who uses what
system. Another good thing to do is find out what frequency or
frequencies the data channel appears. It normally changes daily or 2X
daily - or it can stay on one freq.

Anyway, tips for monitoring trunked systems:

1. Put all frequencies in your scanner bank
2. Use NO scan delay
3. Lock out the data channel(s)
3. Use the fastest scan speed

And GOOD LUCK...When the system gets busy, it is difficult to monitor.

There are some solutions out in the market, depending on the trunk
system your local agency uses. For GE/Ericsson formats with tones at
the end of each transmission, a tone eliminator is available on the
market. And for EF Johnson's LTR format, a reader is available to
display the users and talkgroups using the system and computer
logging. And of course if the system is DIGITAL you are SOL!

Your best bet is to call the agency and ask then nicely what type of
system they will be implementing. Normally they are not hostile.

Good luck and join the many other agencies with this new technology!
Think of it as another challenge!

Joe

Hi Matt

My 8k has no interference or humming on that frequency.
So if it's a birdie, it seems not to concistent in all
8ks.
But wasn't there somthing with the 8ks, known as the
'floating birdie'.
I have no idea if that could be what you're seeing, but
probably somebody else will be able to shed a little light
on it ...

Has anyone experienced problems with interference when monitoring 482.4125Mhz? I have recently upgraded to the AR8000 which seems to have a problem recieving our local fire/ems dispatch. Periodically, I pickup a signal that is about 1/2 strength on the 8k's meter which is just a mild humming with minimal static. I have replaced the factory antenna with good dual band ham antenna with no difference.

I still have my 'old standby' which is a RS PRO-34 which has never had a problem with this freq and does not pick up this interference while the 8k is.

Any suggestions would be appreciated.
Thanks

I'm going to keep the response light in stride with your mild response
to the previous post.

What record ? Are you telling me that you are a proffesional engineer?
Yeah or Nay ?
(It could be verified with little trouble...just pull out the directory of
Peng's.)
Like I said, self proclaimed ! Another "Scientist"...
(I just love it when someone tells me they're a "Scientist" :)

No, I although my occupation is in the world of design engineering I
wouldn't attempt to fool myself or others by claiming to be an Engineer.

Be a good guy Willy !

>I need to know the procedure involved.

Turn on the scanner while holding down the 2, 9, and Lockout keys.
This puts in some of the test frequencies. Go to channel 23 and use direct
scan to get the frequencies locked out of the 800 mHz band.

> scanners? Am I missing something? It seems rather boring to sit and listen
> to someone gab on the phone. Roger

That much is right on the money.....it isn't entertaining or
educational to snoop on phone calls. There is a greater principle at
stake here, however.

You see, the RF spectrum extends from just above DC to beyond
Daylight. RF pervades the planet; crosses your property; passes
through your body; enters your private boudoir; and even penetrates
your brain, your heart, and the "valuables"..... You have no control
over this cacaphony of RF.....but you should have the right to detect
it and to determine for yourself if it, or its content, poses any
danger or jeopardy to your life, health, security, and pursuit of
life, liberty, and happiness.

The government says you may not detect certain radio waves. Isn't
that a lot like being -=forbidden=- from looking in certain directions
as you walk down the street? Or listening to people's conversations
if their voices penetrate your ears? Or wiping bugs off, if they land
and crawl around on your body?

It isn't so much the craving desire to listen to cellular
conversations as it is the utter, imbecilic stupidity of being
forbidden to tune a radio across the RF spectrum. It is another
example of the inexorable erosion of our fundamental rights and
liberties.

The desire to restore the blocked cellular bands in scanner receivers
is only a manifestation of a type of rebellion or fierce disagreement
with the mounting attacks on our liberties and freedoms.

For one thing, when you are out in a public place, and you have
something private or sensitive to tell another, you whisper or take
other pains to protect your own privacy, right? Well, people who
broadcast radio signals across your property and into your home and
body should take the same precautions if they don't want you listening
in. But No! The government stupidly tries to protect THEM while
depriving YOU.

The issues in this matter run deep and they are anything but in your
best interests.....

Okay, the old cooler head approach...Looks like you treated your
bucketmouth with some soap and water...
I'm game...

Sounds good Willy ! Can I drag along the wife and kid ?
Will the ol' lady be there ?

So, whenever you issue the appology for booting me off FIDO without
warning (for allegedly going off topic or was it flaming ?) I'll think
about coming back. Remember , that was pre-"Zero Tolerance" days.
Perhaps we can shit on each other in private. Otherwise, we'll just have
to keep the status quo...I'll stay here and you can stay there.

Gotta love some of the Goderator jargon over there now (FIDO).
"Zero Tolerance"...(What ever happened to democracy ?)
"Co-Goderators"..."What they say goes but what I (BC) say overules !"
(Dictatorship !)

Ah well, we all need to have our kingdoms, eh !? ...and yours is in the world of radio scanners.

Well put!! That's why I have refused to own a cordless phone (it should be MY responsibility to protect my privacy when I am broadcasting to the world), and warned my wife about scanners when she wanted one. We now have one, but do not use if when we want to discuss "confidential" information.

I too could care less about listening to cellular calls... It is a matter of principle....

Bayshore, NY, Weds., July 17, 1996 - The following frequencies have been monitored from here tonight following the crash of a TWA jetliner off the South Shore of Eastern Long Island:

The following marine, Coast Guard & SAR channels have been active:

156.800 - Coast Guard Channel 16 - Cutters, etc.
156.300 - Marine Channel 6 - SAR
156.600 - Marine Channel 12 - Coast Guard
157.100 - Coast Guard Channel 22
157.150 - Coast Guard Channel 23
382.800 - Coast Guard/SAR Aircraft
282.800 - Coast Guard/SAR Aircraft
123.100 - Aircraft/Helicopters
123.050 - Helicopters
143.280 - Coast Guard Auxilliary - Bayshore Radio - Coordinating collection of supplies from local hospitals (rubber gloves, blankets, etc.)
450.8875 - WNBC TV copter
455.6125 - WABC Copter
450.050 - WCBS
450.1875 - WYNY???
SCPD was using channel 9 (155.790) at their command post and had a number of copters in the area assisting with the recovery of bodies. Command channel (155.685) and Channel 10 (155.655) also had some related traffic.

Hello Don,
My docs dont show a reference to any ser. num. but could still be an issue. You may be able to get a cross reference on the ser. num. from RS that would give you a manufacture date, or the date code may still be on your unit.
The mods on the pro 39 are a little tougher then some of the other RS units. If you uncomfortable with serious disassembly and soldering get some help.
Good Luck....

Ouch! You're pretty well out of luck. Now you -=could=- order one
(an electroluminescent panel) from any of the PRO-2005, PRO-2006, or
PRO-2022, which are probably still stocked. Trouble is, they are a
little smaller than the one for the PRO-2004, but it would still
install and hook up the same way. Perhaps with a little creativity
and ingenuity, you could make it fit and not look too bad.

That's one possibility, anyway.

Rgds,

Bill

Because it is matched to your radio or scanner for the frequencies
that it was intended.

> i cant pick up any cordless phones with it,
I am going to assume that you are now hearing cordless phones with
your regular antenna off the back of the scanner for now. Though you
have not told us what frequency you are wanting to listen to. If it is
the older style phones you are intruding upon I.E. the 49 Mhz phones
then I would have to say that the R.S. discone is probably your worst
choice for an antenna. to receive those frequencies!

> and somtimes when i hook up the discone the
>clear frequency i was hearing on the three foot antenna gets worse! I have
>noticed i can pick up Ham radio better though.
? What frequency's did this happen on??
> Is it because the coax is so
>long(0ver 50 feet) or maybe its because the coax is bent at a ninety degree
>angle to get it in my house.
There are alll different kinds of coax! Good stuff and bad stuff.
Depending on the service you want to use it for. You have to look at
the DB loss per 100' which is what most coax is rated at.

I've noticed that Radio Shack, Wal-Mart and other places carry DC
to DC adaptors so that you can power things through the lighter socket
in your car. All of the multi-voltage adaptors I've seen can output
6V. However the BC3000XLT requires 6.5V.
Is it possible to use these 6V adaptors with the BC3000XLT? Will
performance suffer somehow or will it be OK?

Hi Ray, YES...

>> Can I download the contents of this newsgroup(locally to my own machine)
and then look at the posts OFF-Line - when the meter is not running on my
Internet Service Provider? I am using Netscapes V2.01 browser with its own news reader and am using ibm.net as the news source. <<

I use OUI, found on the web at Dvorak/com. You can download a 30 free trial, every 30 days...

If you like it, you can buy a proper version, also via the net.
Do a web search for dvorak/com.

It allows you to subscribe to as many newsgroups as you like.You download the headers first. Offline you then browse the headers, mark any of interest, and the next time you go online it will download new headers, and any messages you have marked. It will also do all of your email.

I have found it a lot easier to use than some of the others....

Any questions, please do not hesitate to ask. There is also a usenet at Dvorak, and the latest OUI lets you add that as well....

Andy...

've used an RS Discone, modified with an additional 36" center
verticle, for about a year now and am very pleased with its
performance. Note that I used RG6 for the 90' feed. Performance in
all bands in far and away better than the whip. I can reach 200 miles
plus (not skip) in some directions if I want, as long as the freqs
aren't near the local power houses, which are as close as 10 miles.

It's mounted on 15' of mast atop my (apx) 25' roof, but I'm in a small dip, so I'm really not much over the horizon.

Mark

>keg@internetmci.com

Since you didn't specify, I'll presume you're talking about public
service and HAM.

There are 2 reasons for this:

1) The system uses a repeater, whereby the transmitting radio sends on
an offset frequency (low power) to the repeater site, which then
re-broadcasts at a much higher power level. the ofset is often 5MHz.

This system is extremely common in public service where hand-helds and
vehicle radios may not have adequate power. It's also used where
terrain presents line-of-sight problems.

2) Some (fairly rare) radio systems use full-duplex, where any 2 units
can both transmit and recieve at the same time. in order to do this,
2 frequencies must be used.

Mark

The truth as I percieve it to be.
Your perception may be different.

Peter, I may have the answer for you. I tuned my AR8000 to that frequency and it defaulted to WFM (yes, I have changed the AR8000 band plan) and see that it is allocated to TV channel 16 (482-488 Mhz). In metro areas, though, such as NYC, It states in the "Spectrum Guide" that this frequency will be allocated to public safety and municipal agencies for several years. Channel 16 is given to public safety outright in Los Angeles. You may be getting some interference from a TV station on channel 16. Alternatively, Cable channel 67 video is on 481.25 Mhz, Audio on 485.75. If there is a leaky cable box nearby, and channel 67 is used in your area, that may be your problem.

I realize this is speculation, but I hope this helps.

>anyone tried this?

Yes, it will work, but will only work well in that band for which it
is tuned (800-900 MHz). It will work marginally in harmonics of that
band.

If your interests happen to lie in the area of 150-160 and 450-470 MHz
(where much of the public service is), a slightly modified CB antenna
works very well, and doesn't give away what's really in the vehicle
(they don't steal CB's anymore, do they)?

All that needs to be done with the typical 30" (apx) bottom loaded CB
antenna is remove the load coil and make minor adjustments to the
length. You'll also change the connector.

I've been useing various magnetics this way for years very happily
(they come off in parking ramps).

The truth as I percieve it to be.
Your perception may be different.

>
> Couple steps to try....

1-Make sure the ground in no ways is touching the actual antenna portion of the discone. In short picture your antenna as being held up by air, nothing should come between the elements of the antenna to the connection of your scanner.

2-Odds are the commission boy at Radio Shack sold you RG-58/U coax. RG-58/U sucks at any legnth over 3 ft.(In my opinion however), If your funds permit go back to radio shack and pick youself up a coil of RG-6.(The same type used for cable TV). First, it costs a hell of a lot less than RG-58/U, and second, the loss per ft. is extremely minimal. You will also need to get the connecters to adapt the RG-6 ends to a PL-259 or BNC since RG-6 is a thinner coax. Yes bending should be kept to a minimal, but coax disected is pretty tough. My teeth know!

3-It is documented that the Radio Shack discone has deficency when recieving on low band 30-50Mhz. I do not use this antenna, so I can not contest to its efficiency.

Hopefully these tips help you in your quest for ultimate scanning, and others alike who find this info useful.

E-mail if you have questions.

> Would appreciate any info. thanks

Don,

I think they quit making the Pro-39 before the laws were changed. I don't ever remember seeing an issue with serial numbers. If I remember correctly, you just have to remove one surface mount diode for the mod (I just removed one contact from the board and pulled it up a little so it could be easilly reversed). However, it not exactly my idea of fun to be messing with SMD's with a soldering iron. Make sure you're static free, and don't use too much heat!

If you can't find the mod, let me know and I'll dig it up!

: understand that only one side of the conversation can be heard on the input side, but
: why is this? How does this work and why is it needed? Thanks in advance.

: keg@internetmci.com

It is my understanding that 2 different freqs are used for 2 reasons. 1) repeaters -- one freq is used as input to the repeater, then the signal is boosted and then rebroadcast on the 2nd freq. Thus you have better coverage, and the rebraodcast signal is heard over a wider area.

The 2nd reason is for duplex communications. You talk on one and then listen on another, thus allowing full transmitting and receiving at the same time (similar to a telephone -this is how a cell phone works).

I think though, that you are primarily talking about repeaters. You are correct that you can only hear one side on the input freq. This is because this is the freq that the mobiles or handhelds are transmitting on and these are usually heard in a limited area. However, the repeater is located usually on a higher elevation and thus can hear more and then repeats on the output freq. This higher elevation can allow the signals to be heard over more area. Here is an example:

There is a local private security company in my area that uses uhf freqs. They use only handheld units that only transmit 1 - 2 watts. They transmit at 466.900. UHF range is usually limited to about 2 miles, depending on terrain. The repeater sits on top of a water tower in the city. It recieves the 466.900 signal and rebraodcasts it at 461.900 at about 50 watts. It can be heard over a range of about 35 -50 miles.

As you can see, it is better to listen to the output freq (if you know it). If you do not know it, then you can usually find it be tuning up or down, depending on the service. Each band (VHF, UHF, ham, etc) has a differnet offset (difference between in and out freqs). So you probably should try to find out what this offset is and then figure out your in and outs.

Good luck!

Hi everyone,

I'm travelling to Corpus Christi on 23-25 July and am looking for good
military freqs to listen to while I'm there. I'm going to be staying at the
Naval Air Station while I'm there, so I'll also be searching for good
freqs to share with all as well. Thanks.

This may be true. HOWEVER, a great deal of the action will take
place on the local frequencies: Atlanta Police, fire and other public
safety. And all in the clear. I have even listened to Secret Service
in the clear. So there will be a lot of good listening for hobbiests.
Check out the Grove home page for an expanded listing of the
frequencies published in the June Monitoring Times.

Why is it that some people answer someone's posting stating they have the item their looking for and then they don't respond afterwards? Louis stated he has 2 of these things. This FM transmitter sold NEW in 1967 for under $40 bucks (In the 1967 Lafayette catalog). I sent him a few messages over the past few weeks and no reply. The only thing I can figure is he is on a world tour and will be gone for a few months or he wants $100 dollars each for the "hassle". If he really is on an extended vacation I owe him an apology. If he is not I think he should have replied and stated exactly how much he is looking for and stop wasting peoples time.

Just my 2 cents

You should guy it right under the antenna, on the mast. The guy wires will be 125% of the height of the mast, Jack. You will need three equally-spaced guy wires, spaced out from the base of the mast 85% of the height of the mast. Use good heavy guy wire, usually available at local hardware store.

3126. AOR AR-900

From: Scott Doerger <frankdrg@cinti.net>
Message-ID: <31EE6411.2FD6@cinti.net>
Source record: 229591

I own an AOR AR-900 and am quite pleased with it. I picked it up really cheap from a friend who got bored with it.

Can anyone tell me how I can improve reception with it? It has a BNC antenna connector, and right now I'm just using the one that came with it. I get OK reception, but I'd like to improve the range and quality.

It's a handheld, but I use is mostly at home, so I was thinking along the lines of larger antenna with a cable running from it that I could disconnect if I needed to take the scanner with me.

Any suggestions?

Scott

No, a frequency counter is a unit for measuring the actual frequency coming out
of an oscillator. They are used to provide an instrument for adjustment of the
oscillator`s frequency. They have a digital gate (usually a flip-flop), and the
gate counts the incoming pulses. They are then displayed digitally on the
readout of the instrument.

Several months ago I saw a posting for a computer interface that was compatible to the AR 8000. Yes, I'm aware that there are "kits" offered for about $50, but let's be real - the chip is a Maxcom CPD231 or CPD232 that sells for about $4 from Digikey. One or two caps and two diodes added and you have the interface. I'm interested in using with Scanstar and Scancat Gold, Does anyone have a copy of the schematic that was posted? If / when I find it, I'll post it for all to use.

>
> Richard.

The matter of big brother not having access to 'the code' for
a particular subscriber (read that 'cell phone user') is really
moot.

If he (read that 'big brother') has a court order it is a very
simple matter to have that number sent to their (big brother's) port on
the switch and ALL calls will be heard no matter which cell site
the subscriber has handed off to.

As to monitoring simple digital calls, the Ericsson phones (digital)
are capable of being parked on a particular channel and a timeslot (TDMA
mode) selected form reception. Viola - reception of a digital call.

Regards, Jim

>display will work normally.

The PRO-2004 is infamous for developing defective solder joints. A wave-soldering machine at the factory went bad by degrees back in '86, and wasn't caught for quite a while. A lot of PRO-2004's failed early on, and some later. More recently, another "wave" seems to be failing.

Worth a try is to remove the seven screws from PC-3 (Logic/CPU) board on the bottom side of the scanner; disconnect JUST CN-501; and flip the entire assembly forward, bottoms up. Then use a low-heat, fine tipped soldering pencil with quality solder, to lightly resolder all suspicious looking solder joints. There may be hundreds, or there may only be a few. You may hit the right one right off, and then it may take repeated efforts.

>The lastest problem has been the squelch not working. The control is set
>so I should hear static but the scanner keeps on scanning.

Try reseating all the audio cable/connectors that originate in the front panel and terminate on the main board. The connectors are at the terminations. Remove and reconnect them.

>Any tips??

The above will get you started. I see where one nincompoop suggested your CPU went on the fritz. That is most improbable, unless you did something to make that suspect. I have worked on MANY PRO-2004's and have never encountered a defective CPU. The problem will likely be found to be one or more defective solder joints....that just took a lot of time to finally go bad.

Bill

Best bet, probably is the AR8000 scanner, a number of computer interfaces are available. Programs which can be used are Scan Star SE, Scancat Gold, and other shareware exists.

Also, you could get a PRO2042 with the OS565 interface, but the interface is a lot of work to install and the total price will be higher than the 8000, and you won't have as many features. The same programs can be used with this setup.

Ray,
You can save a lot of hasstle and time (not to say about the phone
bill!) by getting an OFF-LINE news reader.

I use Forte "Free Agent" V1.0 - It's magic and just what I want out of
a news reader...I recommend it to anyone.

I cannot remember the ftp site where I got it from, maybe someone can
pop up with the site address..

All the best

Donald Gray
Free Agent V1.0 -
Eudora Lite V1.5.4
Please do not short the output or severe damage will be caused to the fuse.
(On a Sony power supply leaflet!)

If you ask me what radio I would use if I was stranded, it WOULD be 800 Mhz..about 870 to 890 Mhz to be more precise. I am a police dispatcher, a ham, a member of the NRA, I don't sell radio systems and I don't poke fun at organizations that I don't understand. All I did in my original reply was mention the trunked systems that work just great in my area, and that those responsible must not "know their stuff" as the original author of this thread implied.

>
>What do people think of this unit? Any obvious omissions on this unit
>that a complete newbie (like myself) wouldn't be aware of?
>
>Thx.
>

I just bought my first scanner, and it was the Pro-25. I knew I wouldn't get cell phones or milair, but hey, it *was* on sale for $185 (reg. $269). I spent an hour or so programming in all the kewl freq's last night (gee, I kept entering 'em wrong...must need bigger buttons, eh?<g>) and then spent the rest of the evening enjoying the action. Even with that little rubber whip antenna, I was picking up sherriff, township and city activity from the next County over (hmmm, lots of activity in the ward last night...). In short, sure it's got gaps, no I probably can't mod it, but hey, it does what I want it to and the price was right! Now if I can talk my wife into letting me pick up a used Pro-2006....

Good luck!

John

3144. Antennas, preamps

Newsgroup: rec.radio.scanner
Date: 1996-07-19 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <4soal6$gjv@usenet.srv.cis.pitt.edu>
Source record: 229400
Cross-posted to: rec.radio.scanner,rec.radio.amateur.antenna

Let me start off by saying that I've *finally* read all the messages in rec.radio.scanner! Over 400 threads and probably around 1500 messages! I'm glad to be caught up. I wanted to thank everyone for their helpful responses in my previous posts, I've learned a ton!

What I'm looking for is an antenna that best meets my purpose. I use a handheld multiband transceiver primarily in a handheld fashion, that is, out and about, NOT in a car, and not as a base station.

I know I am looking for a 'one-size-fits-all' solution. If this isn't possible, perhaps you could suggest antennas that are optimized to work in the airband and the 800mhz band.

I am currently using
a Comet SH-55, which is a 16" whip. I want to receive the airband(approx 108 to 135mhz), VHF-HIGH, UHF, and 800mhz public safety freqs. The comet is a dualband antenna, which means my VHF-HIGH and UHF bands are covered, and I'm assuming it does a good job. Are there other dual band antennas suitable for handheld applications that have more gain than the Comet? Please provide brand names, model numbers, and listed db gain. I've heard the Austin Condors are good as well as the diamond series. Can someone point me in the right direction? I'd consider purchasing one of those if there would be a noticeable difference. Has anyone ever seen a review of 'portable' (ie not mobile or base station) antennas?

Now, if my comet is one of the best(a local ham swears by his), my next logical conclusion would be a scanner preamp. From what I've heard, these can increase the gain considerable. I've never even *heard* intermod on my transceiver, so I don't think there would be a problem there. Any idea on how effective these are for bringing in distant signals? Can someone suggest a quality brand name and model number, as well as approximate cost? I believe Radio Shack sells one, but I'm very wary about purchasing items from them. Portability is an issue, but even if I was constrained to using it at home, or in a car, would be fine.

My last concern is a mobile/car antenna. I'm thinking a 1/4 wave would probably be good. A dual band 1/4 wave antenna designed for dual band use should probably be effective in both 2m and 70cm, but also for airband, seeing that it is so close to 2m. Would this antenna be totally ineffective for 800mhz? Can someone suggest the brand name/model of a quality dual band 1/4 wave antenna designed for mobile use? I know this is a stupid question, but I'm assuming that if this antenna is totally ineffective for 800mhz, would a cellular antenna be the most effective for that range?

I appreciate your taking the time to read this, and any responses will be helpful.

Thanks.

Check out Scanners Unlimited in San Carlos. Give Glenn a call there at
415-573-1624. He can ship via mail. The going rate on a BC200 with
cellular (if available) is about $200. Well worth it. If you have
$200, and Glenn doesn't have any at SU, I have a friend who may want
to sell his BC200 which he never used. Let me know!

3152. Pro 2022

Newsgroup: rec.radio.scanner
Date: 1996-07-19 00:00:00 UTC
From: Tom Montgomery <monty55@ix.netcom.com>
Message-ID: <31F010D7.1C31@ix.netcom.com>
Source record: 229408

I picked a Pro 2022 up at a pawn shop for 90.00 the other day and I very seldom see any information on this scanner in the newsgroups. I restored the cell frequencies and with the help of a friend replaced the crystal oscillator to speed up the scan rate and it works just fine. Bill Parnass mentioned that he submitted an article to MT to be published in September with a few mods and hopefully a review about this forgotten scanner.

I use it in conjunction with my 2004 and it seems to be a reliable performer. If you own a 2022 please post some comments for the newsgroup.

Thanks

Tom Montgomery

>Daren
>DSDIERS@NCN.NET

In the pursuit of scanning, a frequency counter is used to get the
frequency of a nearby tranmitter. How close depends on the strength
of the tranmitter and the strength of other transmitters in the area.
Low power transmitters such as cordless phones and baby monitors may
require that you are within a few feet of the transmitter. Also if
two or more transmitters are broadcasting at the same time, the
frequency counter may not be able to pick out an individual frequency.
For example, at a cell tower there may be quite a few phone
conversations going on at any given time making it difficult to pick
out individual frequencies.

1. hit manual
2. enter lower end of search spectrum
3. hit limit
4. enter higher end of search spectrum
5. hit limit again.
6. hit search.

If you want to stop on an active frequency, hit hold (or limit). Use hold and limit (note the arrows on the keys) to manually search up or down the spectrum.

Press scan or manual to leave the search mode to go to scan mode.

> the CPU WAS replaced, the scanner came to life.
> Hmmm...must have been my imagination.

You either misdiagnosed the trouble and inadvertently corrected a defective solder joint by needlessly replacing the CPU; or you encountered two CPUs that were MADE to go defective. These CPU's do NOT go bad unless they are made to. There are three categories of these "made to's":

1. Excessive speedups with crystals above 9-10 MHz (PRO-2004)

2. Shorting out a critical pin during hacking or measurement procedures.

3. Out-of-spec I/O signals, including but not limited to Acts of God; power surges; excessive EMP/transient/spikes, etc.

So, if you or someone else MADE those two CPUs go bad, that's one thing. I also have fried TWO scanner CPUs in my time. But I KNOW I did it - it didn't "just happen".

The PRO-2004 is especially susceptible to the development of bad solder joints in and around the CPU and PC-3 Logic Board, thanks to a defective factory wave soldering machine back in 1986.....

Chances are, you did nothing more than repair bad solder joints. I have repaired DOZENS that had the same symptoms you described, and ALL failures were attributable to defective solder joints or soldered vias. The problem certainly masquerades as a blown CPU to the uninitiated, though.

>NF2G...Grow up or else I'm telling Police Call!! lets get real. I can
>get that info from anywhere else and its not a sin so what makes
>Scanner Master any different. Go walk into your local Radio Shack and
>ask them for a frequency. They will give it to you with no questions,

The individual who posted the original query
specifically identified a copyrighted book from which he
wanted someone to obtain and copy the information. If he
had asked, "What frequencies are in use in North Arlington,
NJ?" then anyone could have gone to any source (including
Scanner Master if they had one) and said, "Here are some
frequencies from xxxx book."

If you already know exactly what book has the
information you want, then you have an ethical obligation to
obtain a copy of that book. As long as people keep openly
violating copyrights, book prices will continue to rise
(didn't I recently see a thread in this newsgroup
complaining about the cost of Scanner Master books?) until
the publishers just cannot afford to make them any more.
Then where will the terminally lazy get their frequency
info?

Although I've not been into a 2004 specifically, I work on MPU based units regularly. Based on your description, if you had no clock, none of the other things would be there either. In a condition such as this, and with no prior history to go no, my diagnosis sequence would be:

- All power supplies present?
-All clocks present?
-Check for bad solder, ESPECIALLY on large, flat-pack ICs.
-Still down? try crystal first.
-Still down? NOW think about CPU

From: kamst39+@pitt.edu
Message-ID: <4sonra$jjl@usenet.srv.cis.pitt.edu>
Source record: 229463

I purchased a scout not too long ago. I'm pretty happy with its performance overall. The only problem I have is that I get *alot* of hits on the freq's for channels 7-13 and also radio stations as well. This only happens whenever I'm close to a tower, but I happen to live on the other side of valley from a TV transmitter.

Do they make a small filter to attach between the antenna and the scout that can block the scouts reception of these freqs? I need a manufacturer name and model number, and approximate cost...

Thanks.
Keith

>two cents to that, if I may.

So would I. I've corresponded and talked with Dan Conti for years, first via GEnie and later through RCMA and then here as well as by phone at least once. When I made a trip back East to his section of N.J. he was ready and willing to meet and help and was EXCEPTIONALLY kind in providing me with a great deal of valuable info.

Anyone who posts any message impugning Dan's honesty, integrity or reliability is either wilfully ignorant or an damn liar.

Does France have a user licensing fee for ownership of FM broadcast
receivers? If they do, this would save the purchaser the licensing
fee for a receiver that the user would primarily purchase for
non-broadcast reception.

Ok, here is what I found:

72.360 KNKO682 CD CT MOBILEMEDIA PAGING 5252 BALBOA AVE
72.240 KNKG578 CD CT WESTLINK LICENSEE CORP SAN MIGUEL MTN
72.360 KNAJ695 IX MO ROHR INDUSTRIES INC MOUNT OTAY
72.360 KNAJ695 IX MO ROHR INDUSTRIES INC FOOT OF H STREET CV

And man, both signals are smokers up here north of Miramar Naval Air
Station. I would guess both freqs are for pagers and that you'd need
something like POCSAG or JSoft's DataScope to decode them.

Rgds,

Bill

The problem with most cordless phones is low audio. Even on the high volume setting, most 900 MHz digital phones have low audio. (This is especially true of the ATT phones.) I recently purchased a Uniden 9200. I am very pleased with the performance and audio level. The 9200 sells for $330.00.

Yeah REALLY!
I had a guy respond to my want-ad for a RS scanner radio he said he had, but said he would ONLY accept CASH for it. When he sent me his address (Oakland) for me to "Send the cash to", I bluffed him into thinking my brother-in-law only lived 1/2 mile from his house and was gonna come down to check the radio out. I broke out the old PowerFinder phonedisc and Precision Mapping CD-Roms, and could tell him the phone numbers and names of all his neighbors, and every street in his area. I even found the name of the previous owner of his house and where they moved to. Boy, that was fun! I recieved a single message from him after that. Can you guess it?

"Sorry, but my wife went behind my back and sold the scanner already."

Ha Ha Ha Ha. It's better than what his message could have been to me:
"Gee, no, I haven't recieved your cash yet."

BE CAREFUL OUT THERE! Parasites come in all shapes and sizes.

In the town I live in (Simi Valley, Ca) they only request NCIC when the car that is stoped is not local to the city. Also, I've heard them let people go who have warrents out for their arrest because the state that issued the warrant won't extradite.

NF2G...Grow up or else I'm telling Police Call!! lets get real. I can get that info from anywhere else and its not a sin so what makes Scanner Master any different. Go walk into your local Radio Shack and ask them for a frequency. They will give it to you with no questions, especially if you buy a scanner from them. So I guess we should lock up everyone who gives out freqs that are published. If thats the case then let the FCC handle it since they published it way before you did. To think I own a copy of the 5th Edition it doesnt bother me if someone asks.

I accidentally sent reversed polarity down the power cord when I was using my scanner in the car.Now, the power supply sees my scanner as a short and heats up rapidly! The indicator light doesn't come on when I plug in power,and the scanner won't work with plug in power.The scanner works fine on the existing power in the battery pack,however.I opened the battery pack,and nothing looks or smells burnt out,and the power cord checks out ok.Is there something I can fix,or do I need a new battery pack? Or did I damage my baby forever and it can't be fixed....Any ideas?

>BC> the list, if you like. But I notice that you DIDN'T. :-)

>What record ? Are you telling me that you are a proffesional engineer?

I didn't tell you anything. You may infer that I am an engineer and a
professional......33-years worth, at last count. And I can spell,
too! And you IGNORED my question. You're playing games, Duffster.

>(It could be verified with little trouble...just pull out the directory of
>Peng's.)

Pull out whatever little thing you can get your hands on. Jerk it all
you want. You're playing games, Duffster.

>Like I said, self proclaimed ! Another "Scientist"...
>(I just love it when someone tells me they're a "Scientist" :)

Aren't we all? We should be........ I even do a little rocket
science once in a while, dear Duffster. Deep stuff. Make no bones
about it, I do what I want to do.....and most of the time, it has
something to do with overcoming massive obstacles of either substance
or mind.....or both. Whatever label YOU want to push to put on it is
only an example of your continued sniveling and straying from the
topical flow of this forum.

Labels and titles, Mister Duffster, are for those who don't know what
the hell they are supposed to be doing. But let's put it in another
light.....the last five REAL JOBs I had were with the following
titles:

Project Manager (1978-79) Radio telemetry of meteorological & air
pollution data

Telecommunications Engineer (1980) Designer of land microwave and
VHF-UHF SCADA systems

VHF-UHF Engineering Supervisor (1981-82) Same as above, except
lead engineer

Program Manager (1982-84) Satellite & space communications

President/CEO (1988) of a communications manufacturing corporation

Since then, I have achieved a measure of freedom that goes far beyond
title and label. Now I guess you could say that I am CEO of the
world's smallest company. (But I am master of the largest!)

>No, I although my occupation is in the world of design engineering I
>wouldn't attempt to fool myself or others by claiming to be an Engineer.

THAT is only because you are NOT one, then. A man is only what he is.
What others call him makes utterly no difference in the great scheme
of things..... except if he's called LATE TO DINNER. That is ungood.

You seem to have a lot of time to be deeply concerned about WHO and
WHAT I am. Why? Clearly, you perceive yourself as little more than a
toilet scrubber, and perhaps by attacking me, you can elevate yourself
a little? Or perhaps I am an evil entity, and by eradicating me, your
name will go down in history as Savior of The World?

Attack away, sweets! But you might first want to study and bone up a
little on my great, great, step-grandfather-in-law's bastard cousin's
dad, Admiral David Farragut. He rubbed off on me a little. Find out
what he said as his fleet entered Mobile Bay..... I have other
preferred 4-letter words over the innocuous "Damn...."

Indeed! A foundational principle, at that! A thing not altogether
different from conditions that sparked the Boston Tea party. How the
Cellular Telephone Industry could get away with "assuring privacy" to
its customers, and then get a law passed to "ensure" it, is way the
hell beyond my fragile cranial capacity.

But it sure as hell reeks of tyranny......

I heard a couple of dispatches over the last six months that appealed to my somewhat warped sense of humor. Anyone else heard anything amusing?

1) Fire department dispatched to a cryogenics company. Ooooh it's hard to keep things frozen in nitrogen when there's a fire! Hope nobody thawed out before we had the medical knowledge to cure them.

2) Police department dispatched for a 10-90 (alarm sounding, in Missouri). The dispatch was "Respond for a 10-90, motion detector, blah blah blah mausoleum, <street address...>". Ooops, buried alive?

Hi, All,
IN L.A. during the 1984 Olympics, the National Weather Service
has a special Olympic weather station, with international and L.A.
information--in English and French on 162.475.
Anyone in Atlanta know if one has been set up there, or anyone
willing to search 162.4-162.55, and see if you find anything different
in the Atlanta area?
If so, please email your findings to me and/or this newsgroup. Thaks.

It will display the talkgroup and radio identification.

My question is, what good does this do you, the scanner listener?

Now, make it only hear certain talkgroups, and you have got something.

3205. WHAT FREQUENCIES WERE USED FOR THE AIRPLANE CRASH RESCUE?

Newsgroup: rec.radio.scanner
Date: 1996-07-19 00:00:00 UTC
From: jackers@nyc.pipeline.com
Message-ID: <4smr72$a0k@news1.t1.usa.pipeline.com>
Source record: 229524

What frequencies were they using in the search and rescue?

3206. Mir freqs and ground stations.

Newsgroup: rec.radio.scanner
Date: 1996-07-19 00:00:00 UTC
From: bd703@scn.org
Message-ID: <DurMLp.JsD@scn.org>
Source record: 229525

I came across some info about a ground station near San Francisco and another on the East coast of the U.S. operating on 143.625 mhz so that the MIR crew could communicate with the Russian command center. I have heard several passes when Russian was being spoken here (and no activity on 145.55).

During some of the transmissions it sounded as if there was another reciever tuned to another (uplink ?) freq in the background.

Does anyone know if the uplink is on another freq (and what it is)?

Thanks in advance

Kerwin

I have 2 Bearcat BC-145XL base scanners. Asking $50 + shipping
for each. Prefer trade for old/new/broken-good ham gear or
test equipment- help me clean out your closet!

16 channels, lockout, priority, and direct weather freq button.

Freq range:
29-54 MHz
136-174 MHz
406-512 MHz

Both work great and in very good condition. Includes 12V wall
power supply.

>So which is right. Do I need 50ohm cable or not? Or should I just say
>to hell with it and get the belden 9913.

>Vince
There are two effects at work here.

1) impedance matching - The antenna / receiver both have 50 ohm
impedances, however they do vary with frequency. This is one of the
effects that cause transmitters outside of its operating frequency
range to be 'unusable' (there are others which are beyond the scope of
this discussion). However within its band of operation the impedance
stays fairly close to 50 ohms. You should match the 50 ohms so that
as little power as possible is lost due to being reflected back at the
antenna due to cable missmatch.

2) LOSS AND NOISE PICKUP- once the signal is in the cable you want to
keep as much as possible there, keep external noise out and keep the
signal from being 'knocked down' due to passing through the cable.

SO YOU SHOULD
If you are going to operate over a wide range of frequencies, as in
the top frequency is 5 to 10 times (or more) the frequency on the low
end, operate the receiver with different antennas for different
ranges, (a shortwave antenna is not too good at 400MHz, and the 400MHz
antenna is useless at shortwave). This ensures that the antenna is
well tuned to the frequencies in use and the impedance match is good.

Get cable that is low loss AT THE RANGE OF FREQUENCIES YOU WILL USE.
different cables are good at different frequency ranges, and no one
cable is perfect for all ranges.

> Can someone please tell me the differences, and/or where
> there's an info page on the 200xlt?

The 200XLT was "finished" several years back...hence no 200XLT on their web page.

The 220XLT is the nearest direct replacement which features the same frequency coverage all in a new case. ASFAIK the 230XLT is the original 220XLT package with an additional spare battery pack included.

In a similar way the 120XLT replaced the 100XLT - coverage similar as above but no 760MHz+

>Sounds good Willy ! Can I drag along the wife and kid ?

Sure, so long as you don't mind the possibility of raising someone
else's kid about 3/4ths of a year later.

>So, whenever you issue the appology for booting me off FIDO without
>warning (for allegedly going off topic or was it flaming ?)

It was "acting like an asshole". And there will be no apology just as
there will be no "you coming back". You're dead meat, Duffy-Baby.

> I'll think about coming back.

Instead, hire someone to do your thinking for you. You'll get better
results and waste less time that way.

> Remember , that was pre-"Zero Tolerance" days.

Nope. You were just one of the first to test it.

>Perhaps we can shit on each other in private. Otherwise, we'll just have
>to keep the status quo...I'll stay here and you can stay there.

You can do whatever you please....EXCEPT come back to the SCANRADIO
forum. That, my fine liver-lipped friend, you may not do.

>"Zero Tolerance"...(What ever happened to democracy ?)

Are you stupid or what? Message forums are not democracies; never
were, and ain't ever likely to be. They're either anarchies like this
one - or they're well maintained and controlled monocracies like the
SCANRADIO forum.

>"Co-Goderators"..."What they say goes but what I (BC) say overules !"
> (Dictatorship !)

You always did like a good "dicktater", Duffy-Baby, so whatcherbeef
now? You bent over and got porked for your time and trouble. You DID
it, with full choice and knowledge all the way, pal. So quit your
sniveling and whining now.

>Ah well, we all need to have our kingdoms, eh !? ...and yours is in the
>world of radio scanners.

.....and computers....and chess...and poker....and a few other things.

I am definitely NOT a "good ol' boy" member of the herd. Whether it's raising petunias and habaneros, or hacking and writing about scanners, or using a computer to reach out to the stars, you can bet that fat patooty of yours that I -=WILL=- achieve a level of excellence and mastery.....or I won't be doing it. I don't do anything half-way, pal. THAT just gnaws on you and sticks in your craw, doesn't it?

-= Your Maker and Master =-

Source record: 229542

I am looking for a Service manual or schematic for the Radio Shack COMP-100 Scanner. Can anyone also give me the history on this radio. I looked in some older Radio Shack Catalogues but never seen it. I think it was made in 1976 and only for one year. This was Radios Shacks first programmable scanner, even before the PRO-2001.

Called Radio Shack and they don't carry the manual anymore.

I am also looking for a Service Manual or schematic for the Tennelec MEMORYSCAN MS-1 scanner. This scanner is similar to the COMP-100 and Bearcat 101 being a binary programmable scanner.

3224. FS: Radio Shack Frequency Counter

I am selling a Radio Shack Frequency Counter that I bought about 3 months ago. It is in *perfect* condition with original box and manual. It has been used MAYBE 5 times. There is NO sign of any use and it even has brand new alkaline batteries in it.

I paid $99.99 for it, and am willing to let it go for $75.00. The reason why I'm selling it is I finally got the cash together to buy a Opto Scout.

If you wanna do COD, I'll split the shipping costs and if you prepay, I'll pay the cost of the shipping.

Serious inquiries only to kamst39+@pitt.edu.

Hello to all,
I'm looking for a Kinematix "Imp II" FM wireless mike. This gizmo was made around 1967 or so. It's a very small (small enough to fit in a cigarette pack) FM transmitter that covers 88-108MHz. It runs on a "AA" cell or a 9 volt battery (round type). Anybody having one of these buried in a draw or closet and wants to part with it please e-mail me direct.

Thanks, Mark

I've not been into this particular unit, but have worked on many units
that use both battery and wall wart supplies.

It is common in these units to have a reverse polarity protection
diode right at the wall wart supply input. When presented with a
reverse polarity supply of adequate current, the diode will short.

This matches your symptoms. Look for the diode very near the dc jack.
It will read a nearly dead short in both directions. Replace and
you're back in business. Note: it is unlikely an visual evidence
will be found.

It really does not matter much what frequency the radio system is on, it
is how well the system is implemented that matters. If you put enough
voting recievers and transmit sites up, a system on 800 Mhz will work
just as well as a system on 450 Mhz or 150 Mhz. I work for Los Angeles
County and we went from a 3 site 450 Mhz system to a 7 site 800 Mhz

trunked system (EDACS) and the trunked system sucks! Not because its "on 800", because the mountaintop sites, simulcast equipment etc was not implemented correctly.. That's what matters.

>info?

I could have done that if the book 1) was still in print (it is not.)
2) still in stock (it is not.)

The book has been sold out by the publisher for over a year (I got this
directly from them.) And, the book is sold out everywhere.

The new 6th edition of Scanner Master NY/NJ edition is a whopping
$38.95 which is way out of line (it is still not released from what I
hear.) At that price, I do not think Scanner Master has a best seller
on its hands.

HD> >What record ? Are you telling me that you are a proffesional engineer?

BC> I didn't tell you anything. You may infer that I am an engineer and a
BC> professional......33-years worth, at last count. And I can spell,
BC> too! And you IGNORED my question. You're playing games, Duffster.

NO games played here Willy...YOU are the one doing the dance.
What question did I ignore ? Was it my statement that you are not the only knowledgeable scanner buff around town and your pompus arrogant reply of "oh ya...tell me who ?" Well I prefer not to drag others into this so let me say that it is of my opinion and retract the statement for that reason only (not that I agree that you are any kind of scanner god).

So now that I've cleared that up...YOU stop with the games.
Why don't you you just answer YES or NO...Are you a Engineer ?
I don't care to hear that you have X number of years in Engineering environments so that qualifies you as one in your own mind.
YES or NO ???

By the way, if you're so qualified and competent why did you have someone else design and write the firmware for the CE-232 scanner interface ? Why are you not able to tackle such a project on your own Mr."Engineer" ? (You already told me it was someone else.)

BC> Labels and titles, Mister Duffster, are for those who don't know what
BC> the hell they are supposed to be doing. But let's put it in another

Tell that to the good folk who invest countless years in education to qualify them to use labels and titles.
I do design Engineering but admittedly don't have a University degree in Engineering so therefore have no right to be so bold as to label myself as an one (nor belittle those who do).

I only asked a question and you are the one playing games Bill.
Your attutitude is what rubs people the wrong way.
You're just so damned high on yourself.

If you want to know why I'm on this mission it's because of the arrogant, condescending and verbally abusive dialog I have witnessed during past messaging with you...you sure rubbed ME the wrong way.
Your horn blowing and overinflated fat-head need to be brought back to Earth.

You are NOT the SCANNER GOD you think you are. Get a grip on reality.

I have found my cell phone antenna to perform better than the scanner
antenna I had on my car. It is too short for VHF low band, but work
as well or better from air freq and up. It's the only way to go for the
800-900 mHz band.

>damage my baby forever and it can't be fixed....Any ideas?
WELL A FEW THINGS COME TO MIND> FIRST OF ALLO< AND THIS IS ONLY
SPECULATION SINCE I have no idea what kind of scanner it is, it is possible
that you may have fried a componant in the scanner it'sself but it would be
something between the scanner and the external supply. The power from the
battery pack may come into the radio via a different path. If it is a
supply that is designed to charge the battery pack while the scanner is
running then it might be a diode in the scanner which would be used to
controll the charging current. If the power cord plugs into the battery
pack, then it's probably something in the pack it'sself. Like I said
before, this is all speculation, but I don't think the scanner it'sself is
ruined. You might try the new battery pack approach first.

From: sspawar@students.wisc.edu
Message-ID: <4srp8j$8gt@daily-planet.execpc.com>
Source record: 229368

Hi! I have a Minitor IIsv (repeating) pager, which I accidentally dropped while on a call. Though there appears to be no apparant structural damage to the pager itself (i.e. no cracks, nothing rattling inside, etc.), it does not operate or turn on. When I place it in its charger, the "pager" light does not illuminate either. I'm wondering what the chances are that it is simply a connection or something that came loose when the pager fell. Any ideas or suggestions would be greatly appreciated!!! Please reply via E-mail to sspawar@students.wisc.edu. Thanks in advance!

I wasn't taking stabs in the dark when I concluded that the CPU was
shot. I'm quite versant with with microcontrollers too. Trust me when
I tell you I had gone over the obvious before concluding that the CPU
was at fault. Correct supply voltages were all present, suspect solder
joints were re-sweated, crystal was changed twice...I even breadedboarded
the CPU on a piece of pc board with a crystal, a reset circuit, required
pins were tied appropriately and there was no sign of life.
Then I "think about CPU" !

BC>
BC> So, if you or someone else MADE those two CPUs go bad, that's one
BC> thing. I also have fried TWO scanner CPUs in my time. But I KNOW I
BC> did it - it didn't "just happen".

WRONG !
One of the scanners was obtained in that state and I could not confirm
the reason for the faulty CPU...it very well could have been caused by
someone trying to perform a "Cheek Mod" :)
The other CPU problem DID occur in my posession. It was in operation
24 hrs a day for a couple of years. This one started doing odd things...
The scanner used to run hot...I suspect that the heat may have affected
the CPU and it began to act flakey.

Buddy with the problem 2004 never gave any info about the history of
his scanner or admission of previous 'tinkering'.

> Chances are, you did nothing more than repair bad solder joints. I
> have repaired DOZENS that had the same symptoms you described, and ALL
> failures were attributable to defective solder joints or soldered
> vias. The problem certainly masquerades as a blown CPU to the
> uninitiated, though.
> | Bill Cheek

Don't think so Willy...I have the sense to have systematically exhausted
the obvious before concluding that the CPU was bad.
Reset CPU, re-sweated solder joints and checked for via continuity ect.
When you don't see any activity at the clock and you have all of your
correct supply voltages and the reset circuit is intact and holding at
the proper level then you can start to suspect a problem CPU.
Furthermore, a good quality machined socket was installed on the CPU
board....the scanner worked with the new CPU and didn't with the old
one. Go figure !

HD> >Sounds good Willy ! Can I drag along the wife and kid ?

BC> Sure, so long as you don't mind the possibility of raising someone
BC> else's kid about 3/4ths of a year later.

Hahaha ! Deflate that fat head or yours Billy....my wife wouldn't
touch you with a thirty-eight and a half foot pole...in fact she
wouldn't give you the time of day. I've had the unfortunate
opportunity to see your mug and I can tell you she wouldn't even piss
on you if you were on fire.
Not to mention, I could imagine you would need some rigidity assistance...
use some of your Engineering skills perhaps !? :)

HD> >So, whenever you issue the apology for booting me off FIDO without
HD> >warning (for allegedly going off topic or was it flaming ?)

HD> It was "acting like an asshole". And there will be no apology just as
HD> there will be no "you coming back". You're dead meat, Duffy-Baby.

Do you know what SATIRE is Billy ? Remember when you told me...
"I'll consider letting you back on FIDO if you issue an apology..." ?
(I replied..."not likely !!!") Ya...I'm "dead meat" alright..haha !

Was it hitting you in the funnybone (or pocketbook) with some technical
questions that you couldn't answer that humiliated you into a rage of
expelling me (without notice I might add...hence the new "Zero
Tolerance" rule...ooohhh !) that put you off the deep-end ?
What was it now that afforded me the label "asshole" ?

Regardless, I couldn't care less if you legitimately "let" me back on
FIDO or not. I'm still there on occasion just to watch you make a fool
of yourself and have been since I was expelled under my real name !

As a matter of fact ever since David Stark had to relieve himslef as the
Moderator...and you conveniently took over (did somebody say CONFLICT OF
INTEREST ?), the original rules of the FIDO echos have been twisted and
it is nothing more than the Bill Cheek Scanner mods book/ CE-232 support
echo. Nothing more, nothing less.. Still the same old cronies of yours
who kiss your 'cheeks' and upload countless number of useless messages
to make it look like there is a busy flow of messages when in fact, its
just you, them and few other technically challenged folk who have not
yet had to encounter your arrogancy.
Someone else just yesterday posted a message here to the same effect...
No FIDO ? No great loss !

HD> >Perhaps we can shit on each other in private. Otherwise, we'll just have
HD> >to keep the status quo...I'll stay here and you can stay there.

BC> You can do whatever you please....EXCEPT come back to the SCANRADIO
BC> forum. That, my fine liver-lipped friend, you may not do.

I'm heartbroken :(
Oh well...Let the anarchy begin !
Since the FIDO Scanradio echo is saturated hence you feel the need to
poison this domain then its Put up or Shut up !

Gotta sell more of those Someone-else-designed-it-232's eh ?
Yet another "Sale". "Special" ! "Get yours before they're all gone" !
"New low price" !

HD> >"Zero Tolerance"...(What ever happened to democracy ?)

BC> Are you stupid or what? Message forums are not democracies; never
BC> were, and ain't ever likely to be. They're either anarchies like this
BC> one - or they're well maintained and controlled monocracies like the
BC> SCANRADIO forum. (DICTATORS)

Are YOU stupid or what ? This newsgroup is NEVER in a state of Anarchy
until YOU show up.
Why is that ?

HD> >"Co-Goderators"..."What they say goes but what I (BC) say overules !"
HD> > (Dictatorship !)

BC> You always did like a good "dicktater", Duffy-Baby, so whatcherbeef
BC> now? You bent over and got porked for your time and trouble. You DID
BC> it, with full choice and knowledge all the way, pal. So quit your
BC> sniveling and whining now.

And here starts the childish namecalling and silly dialog not to mention
a dance from the original context.

FIDO ScanRadio Goderator DICTATOR ! Hear me ?

BC> I am definitely NOT a "good ol' boy" member of the herd. Whether it's
BC> raising petunias and habaneros, or hacking and writing about scanners,
BC> or using a computer to reach out to the stars, you can bet that fat

Seems every lowlife that can't make it on his own or stand on his own two damn feet wants a go at me for a free ride to the stars. It gets on their nerves when I extract a tax for being clingberries......

> I begrudge no one the opportunity to make money in this
> hobby. If the product sucks, it won't sell. Obviously Cheek's books
> continue to sell because he keeps coming out with them.

And I don't do it for my health, either. I got publishers yanking on me from one side and hackers on the other. About every couple of years, I just have to give in and crank out another one......or get the snot beat out of me by both sides.... :-)

Funny thing is, though, I come on here to drop off an informational and educational FAQ a few days ago, and wingnuts, Hubey Duffster and Petey J. PoopBreath got the urge to have a go at me.

The REAL funny thing is that I kicked ol' Duffster's ass off the FidoNet SCANRADIO forum about six months ago for acting like an asshole. So he frogs onto this public anarchist forum to drop his britches, pee and poop all over the place so the world know just what happened to him and what a jerk I am for having the audacity to give 'im the boot. Hell, I kicked his ass so hard, me and HIM had to go to the hospital on three legs to get my foot surgically removed from his grumpstump. He's still a little "sore"....if you know what I mean. <wink - wink - nudge - nudge>

Now little ol' Petey Poop.....I don't know what his problem is, other than I see him over on the shrink newsgroups all the time trying to score hits of Depo-Provera and other things to settle his nerves. Way back a year ago, some other snotball was on this group day in and day out blowing and going on about me....so I popped in to have a visit with 'im, and that's when ol' Petey Patootey jumped on the bandwagon. I think he and the snotball had 'em something going..... At one time, they were writing in another group about going shopping for furniture together. One liked Danish Modern and the other'n liked Colonial.....

That's about it up to the minute. More news at 11. Petey-boy will be wanting to get on the pot next. Then Duffster will want his turn. They both just LOVE to sit after me.

CYA......

In article <DuI2z8.Ew7@news2.new-york.net>, dconti@carroll.com (Daniel M. Conti) says:
>
>Greetings:
A short time ago, there was some posting with regards to the question on the honesty and/or reliability of Mr Dan Conti. I would like to add my two cents to that, if I may. Prior to said bantering, I responded to Dans post offering the AOR AR2700's, brand new for a very favorable price. I am a retired police officer living on a very fixed income due to a bad heart. In order to spend ANY money on my hobby, I have to be very careful. I have wanted one of these radios for a while (actually I'd like the 8000, but will wait till I win the lottery for that <G>). I asked the better half and she said OK. I got together with Dan via E-mail and made the arrangements. The radio was shipped when promised. It arrived when it was supposed to. It was what I was told it would be. Therefore, what I would like to say is simply this. Certainly there are those individuals out there in cyberspace who will use any scheme imaginable to seperate the honest members of society from their hard earned dollars. Mr Conti is not one of those such people. This was my first ever business transaction that was initiated over the internet and it left me with a positive feeling of such matters. Happy monitoring to all!
Regards, Raymond Miller, N2NJK

3260. Clearing BC200xlt frequencies

Newsgroup: rec.radio.scanner
Date: 1996-07-20 00:00:00 UTC
From: cdenny@iquest.net
Message-ID: <31f03e3a.19080046@news.iquest.net>
Source record: 229412

Does anyone know the steps needed to clear the BC 200xlt frequencies? I know it's just a matter of pressing the correct keys during turn-on, but I forget what they are! Any help would be greatly appreciated.

-Chris Denny

3261. Scanner-Computer Interface

Newsgroup: rec.radio.scanner
Date: 1996-07-20 00:00:00 UTC

Message-ID: <31f02bfb.68465144@192.188.72.19>
Source record: 229413

July 19, 1996 PRESS RELEASE July 19, 1996

The CE-232 SCANNER/COMPUTER INTERFACE
from COMMtronics Engineering
PO Box 262478
San Diego, CA 92196
Fax/BBS: (619) 578-9247
E-mail: bcheek@cts.com

Effective 7/9/96, the standard everyday price of the basic CE-232 Kit has been permanently reduced from $194.95 to $149.95.

The price of the Assembled/Tested CE-232 board has been reduced from $244.95 to $199.95.

Contact me privately for other substantial price reductions.

OVERVIEW
========

The CE-232 Scanner/Computer Interface is a 2.5" x 3" electronic board that goes between an IBM-PC/XT/AT/compatible computer and a scanner, for some very powerful capabilities.

The CE-232 is a -smart- RS-232 Interface controller and data acquisition system for some scanners and at least a drudgery-free automatic programmer and remote controller for all supported scanners.

The CE-232 eliminates the drudgery and disappointment in scanning by its ability to "AutoProgram" up to 999 memory channels from a plain ASCII text file in a short time, error-free and exactly the way you want it.

The CE-232 also allows control of the scanner from the computer's keyboard; a strong plus for handheld scanners and those with hard-to-operate keyboards!

The CE-232 is a one-way controller and AutoProgrammer like described above for MANY scanners, including the PRO-2042, PRO-2035, PRO-2022, PRO-43, PRO-39, PRO-37, PRO-34, PRO-26, etc.

The CE-232 is a TWO-WAY controller and data acquisition system for the time-honored PRO-2004, PRO-2005, and PRO-2006 scanners which have unique circuitry that allows the CE-232 to do a LOT more than just AutoProgram and Remote Control, including log data on "hits", reject undesirable signals, look up data about a certain frequency, and much more described below.

Inquire for details about these or the many other scanners with which the CE-232 Interface is powerfully capable.

==========
DESCRIPTION OF CE-232 PERFORMANCE & SPECS
==========

** Operate the scanner from the Computer's Keyboard! **

REMOTE CONTROL FROM COMPUTER'S KEYBOARD:

Virtually all functions of the scanner can be operated from the computer's keyboard. For example, a replica of the scanner's front panel is displayed on the monitor along with a keypad emulator to show the keys to be pressed as if you were operating the scanner in a normal manner. The CE-232 does not slow down the scanner nor alter its peformance in any manner! Not only can you operate the scanner from the computer's keyboard, you can also operate normally from the scanner as well.

NOTE FOR PRO-2004/5/6 ONLY: As the scanner operates, the computer monitor displays EVERYTHING that the scanner shows in its LCD display!

==========

** The scanner is AutoProgrammable by the CE-232! **

AUTOPROGRAMMER

The CE-232 can auto-download into the scanner's memory up to 999 channels at a time, from a previously prepared plain text list of frequencies! Auto-Programming includes channel, frequency, DELAY, MODE, and LOCKOUT functions as desired.

This AutoProgram feature applies to all supported scanners, limited only by the number of memory channels in the scanner, up to a maximum of 999.

You can also manually program the scanner from the computer's keyboard,
in conjunction with normal remote keyboard control as described above.

NOTE: The AutoProgrammer function of the CE-232 uses a very simple ASCII text format, well within the capability of any text editor and/or database manager to construct and lay out.

** The CE-232 has good 3rd party support **

Now get this: the PerCon Corp (regional+) FCC-Databases-On-CDROM have a special export feature for the exact type of file format (*.APF) for quick and automatic generation of AutoProgrammer files for the CE-232 Interface! Within minutes, you can have thousands of frequencies for your area ready to be AutoProgrammed into your scanner! For more information about PerCon Corp and their FCC Database products write or fax:

PerCon Corp; 4906 Maple Springs/Ellery Road; Bemus Point, NY 14712
Fax: (716) 386-6013 Voice: (716) 386-6015
E-mail: admin@perconcorp.com http://www.perconcorp.com

==========

** CE-232 has 4 Electronic Switches for User Control
of modifications & other scanner functions **

USER DEFINABLE CONTROLS

The CE-232 offers four user-definable switches that can be used to control add-ons or other modifications that you may have done to your scanner! Uses for these User Switches are virtually unlimited, but might include turning on/off things like Automatic Tape Recorder Switches; extra memory banks; Data/Tone Squelch and any other of my mods or add-ons that you've developed or acquired. These UserSwitches

are controlled by YOU and, if desired, automatically by the computer using the Script function! (The Script Function is described below.)

(User Switches available for all supported scanners)

==========
THE FOLLOWING FEATURES ARE AVAILABLE ONLY FOR PRO-2004/5/6 SCANNERS
==========

** Easy-to-use AutoLogger feature **

AUTOLOGGER

The CE-232 will AutoLog for unlimited periods of time, any and all activity encountered by the scanner, regardless of the mode. Each -event- (squelch break) is logged to a text file as a data line item containing the following information at a minimum:

CHANNEL: number
FREQUENCY: MHz
MODE: AM, NFM, or WFM
DELAY: status, set or not
LOCKOUT: status, set or not
FUNCTION: Prgm, Man, Scan, Search Up, Search Down, etc
STEP: Search increment, kHz, if applicable
DATE: of event
START TIME: of event
DURATION: of event (seconds)
(and more): several user-definable parameters including S-metering!

Autologging can be turned on or off at will. Autologged files are automatically opened and named with a date/time logo, similar to: 96070812.LOG meaning: 1996, July 8, 12th hour (noon).LOG. Each hour, a new log file is opened and the old one closed & saved.

Autolog files can be AutoProgrammed back into the scanner's memory at will with no manipulation or changes; just the press of a couple of

keys! This means that you can do a SEARCH function all night or day while you're away and then at your leisure, program in each new found frequency quite simply, hands-off, in a matter of minutes!

PRO-2004/5/6 feature only

==========

** CE-232 rejects "birdies" and other undesired signals! **

AUTO-REJECT

You can do like I did.....disconnect the antenna; set the ATT switch to the -10 dB position and do a SEARCH from 25 MHz - 1300 MHz with the autolog feature ON. About two hours later, you'll have a file that contains just the BIRDIES in your scanner! Now you rename this file to something like BIRDIE.REJ, and the next time you do a frequency search, you can specify another CE-232 function called AUTO-REJECT, that prevents the scanner from locking or stopping on a "birdie".

But that's not all! You can insert other undesirable frequencies into the BIRDIE.REJ or another *.REJ file, so not only can you EASILY make the scanner forever reject birdies, but also pagers, data channels and other obnoxious signals that you don't want to monitor!!!

PRO-2004/5/6 feature Only

==========

** CE-232 offers a LOOKUP feature for I.D. of signals! **

AUTO-LOOKUP

The CE-232 sports a LOOKUP function which displays your data for a frequency every time the scanner STOPS on an active signal! Your previously prepared AutoProgrammer File will do nicely for this function, and thereforewill display whatever is in your database for that frequency! Great for quick identifications of the signals received by your scanner!

PRO-2004/5/6 feature only.

==========

** CE-232 offers a Script Language to automate scanning! **

AUTOMATED SCRIPTS

And, now comes perhaps the most important feature of all: a very powerful -script language- which lets you automate a series of functions to make the scanner do various things while you're away or not interested in being right there for the operation! In simplest form, you can make a Search & Store function to log everything it hits the first time, but to reject duplicates if hit again! You can make things happen at certain times and stop at other times; and otherwise

the Script Language allows you to write your own convoluted functions and procedures! Essentially, this scripting feature is much like a macro function; you write your own ticket! And it's not difficult, either. In fact, many scripts are provided with the program!

PRO-2004/5/6 supported feature (but may work with other scanners)

==========

** The CE-232 has flexible inputs/outputs for the User **

USER-DEFINABLE INPUT/OUTPUT BITS

The CE-232 offers 22-bits of unallocated, user accessible I/O registry. There are 8-bits of Output logic that can be controlled from the CE-232 Script feature simply by setting -low- and -high- in these bits. The implications are enormous considering that a variety of logical operators can be configured to turn various bits on and off, depending on a variety of user defined input data. The status of these user-defined and script controllable OUTBYTES is displayable and recordable by the AutoLogger.

The CE-232 offers 14-bits of Input Logic that can be tested from the Script function. High and low logic (+5v and 0v) can be applied to these input bits from external sources, much like sensors for idiot lights in a car. One application we have developed is for an S-METER! The AutoLogger can read and store these Input bits, so every -hit- can be associated with a signal strength!

==========

MORE 3RD PARTY SUPPORT: -VADER-

-VADER- is a Voice Activated Digital Electronic Recorder from a space age company, Intercept Technologies, that closes the gap on automated SEARCH and SCAN when you're away from your monitoring post! VADER is more or less a solid-state audio recorder that plugs into an expansion slot in your PC and works with the CE-232 Interface to record and store audio signals, hands off. Tape recorders do that, right? Yeah, well tape recorders don't do what VADER does!

VADER uses the CE-232 to synchronize every bit of audio it records to a logged file with the result that you can later do instant playbacks strictly by frequency, channel, durations, and more! Furthermore, VADER uses 16-Mb of cheap audio RAM to hold up to an hour's worth of continuous audio, the format of which is easily converted to *.WAV and

other sound formats for digital signal processing and permanent storage as desired. There is so much more to VADER that you'll need to contact INTERCEPT TECHNOLOGIES at their BBS: (513) 297-0250 or write: 74 Western Ave, Enon, OH 45323

==========

OTHER INFORMATION
==========

The heart of the CE-232 is a non-proprietary computer on a chip made by Motorola (68HC11 family). But the neat thing is that this microcomputer does not contain any firmware or hard programming like others do! Instead, the proprietary software is on the supplied disk and is loaded into the microcomputer chip each time you boot the CE-232 program! This means that we or 3rd parties can develop inexpensive updates on disk can be made available at regular intervals. Other suppliers would have to provide a whole new chip to make upgrades; more expensive to them and to you!!

==========

HOW THE CE-232 IS AVAILABLE
==========

The CE-232 is available in four different ways and forms:

1. As a Kit of essential parts, including a professional printed circuit board; six DIP integrated ciruits; one non-proprietary microprocessor chip & chip carrier socket; and a small handful of parts (resistors, capacitors, diodes, crystal, voltage regulator, etc.) Included is our proprietary program disk, you specify size.

Not supplied are standard DIP IC sockets (highly recommended); solder; wiring; serial cable; input & output connectors nor a project box in which to install the CE-232. The board can be installed in some scanners, if desired, but an external box is much better for most situations.

Included are a very detailed Manual, and Program disk with control program and many supporting files.

2. As an assembled and tested board, ready for you to install in a project box or in the scanner. Comes with the same Manual and Program disk as above.

3. Complete turn-key installation and setup - we do it all.

4. As a totally do-it-yourself project, featured in Bill Cheek's new ULTIMATE SCANNER book with complete instructions and resource guide!

+==========+

Availability is usually from stock on Kits of Parts (Item 1). Assembled and tested boards are also usually available from stock, but inquirefirst. Custom assemblies and installations by prior arrangements and will be quoted upon inquiry.

==========

TECHNICAL SUPPORT
==========

Doubtful of your abilities, are you? Relax. If you know the difference between a soldering pencil and a welding torch, you can probably do the job. The 100-page Manual takes you step by step to success, and it has been done hundreds of times before you came along.

Yes, people have had problems, most very minor..... But, if you have ANY problem, we will provide Technical Support until you have reach success. It's old-hat to us....we've worked with green weenies and salty experts. We have been able to guide to success EVERY purchaser of the CE-232, who has come to us for Tech Support.

The primary tech support media are either Internet e-mail, or the Hertzian Intercept BBS where there is a special forum and a file area expressly for the CE-232. Some people don't like BBS's or don't have a modem. So support is also available by FAX, Internet e-mail, CompuServe, and if necessary, snail mail. The only medium where tech support is definitely not available is voice telephone.

One, it's too costly to be distracted by the phone, so I don't use it under ANY circumstances, but two: technical support for electronic technology is NOT very effective by voice. The written medium is the BEST and we assure you of timely support when you need it....almost always within 24-hours of your request, if by electronic means.

Sorry....mail takes whatever time it takes, but BBS, FAX, and e-mail get our immediate attention. The bottom line is we won't let you and your scanner flounder because of a few little problems.... though if you follow our instructions, you are not likely to run into any problems that you can't handle on your own. Tech Support is one of our strongest commitments.

==========

CAVEATS & REQUIREMENTS
======================

The CE-232 works with a PC/clone computer with MS-DOS 3.1 or higher. A minimum of 512-k memory is required along with about 3-Mb of free hard disk space. (Operation from floppy disk is possible.)

Operation under Windows 3.1, Windows For WorkGroups 3.11 and Win95 has been tested and proved.

MACINTOSH NOTE: We do not support the CE-232 with Macintosh computers, but we can refer you to those who might. Inquire.

The CE-232 connects to the computer's A or B serial ports (COM1 or COM2 only) by means of a standard serial cable of any reasonable length, say 25-ft or less. The computer's COM port must be capable (and most are) of 9600 baud, 8-data bits, no parity and 1 stop bit: (9600,8N1).

The CE-232 has been tested on an XT/clone, 386SX/16, cx386SX/33, i386DX/33, i486DX/50, i486DX4/100, AMD486DX4/100, AMD 5K86/P90, and Pentium computers with equal success and good results. Hundreds of

CE-232's are in operation around the world on a wide variety of computers and operating environments, by professionals and hobbyists, alike.

The CE-232 was designed for the PRO-2004/5/6 series of scanners, but it works to a limited extent with many other scanners. Inquire or see above for the latest.....

The CE-232 works with all known scanner modifications EXCEPT crystal speedups where the Clock Resonator was replaced with a quartz crystal to speed up Scan & Search. Unfortunately, the original Resonator must be reinstalled in order to be compatible with the CE-232. (We can supply them if you lost or broke yours.)

==========

ASSEMBLY & INSTALLATION DISCUSSION
==========

Assembly of the printed circuit board is straightforward and not at all complicated. It takes me about an hour complete the board with no instructions! My 15-yr old (at the time) daughter, Ali, assembled a board in under 2-hours using ONLY the written instructions I had provided her. Her Board worked the first time out.

Three wires are required between the computer and the CE-232, and about 10 to 20 wires from the CE-232 to the scanner are required, dependingon the scanner. These connections are not difficult in most scanners.

For the PRO-2005/6, removal of the Logic/CPU Board from the front panel is required for five of the connections; no big deal, maybe intimidating to the uninitiated, but the instructions are clear.

The most difficult part of the assembly & installation process is fitting the CE-232 board into a project box; mostly a simple mechanical matter. Most of YOU will be more inclined in this area than I am.

If the CE-232 is installed in a project box, then a method must be devised to connect the CE-232 to the scanner. I use DB-25 connectors mounted on the rear of the scanner and then wired within to the required points in the scanner. A standard parallel cable connects between the DB-25 connector on the scanner to a mating DB-25 connector on the rear of the external metal box. Piece of cake that way.

Operation of the CE-232 is a snap! The program is easy to use with pull-down menus and a detailed set of documentation. Much in the way of convenience is built into the CE-232 software and all I can say more at this point is WOW! I am impressed.

==========

WARRANTY & GUARANTEE
====================

The CE-232 is a KIT, even in assembled/tested form. Unless we install

it, we cannot guarantee it like ready-to-run factory merchandise. But

we do offer 5-day/100% and 30-day/80% money-back policies (less shipping & handling) provided the sealed, translucent -bag of parts- has not been opened or tampered and the Kit materials are returned in like-new condition within those periods. This gives you the opportunity to review the Manual and the Program Disk and to make up your mind about committing to the Project. If you commit to it, then we commit to your success via our Technical Support Program described above.

==========

DO YOU HAVE QUESTIONS?
======================

I am open to your questions of what the CE-232 will and will not do as well as anything else that might be related to your uncertainty as to whether or not the CE-232 is right for you. You can communicate with me via the FidoNet SHORTWAVE or SCANRADIO echoes, or by any of the means listed below.

While the discone may not be the greatest antenna design (0db gain...but it is broadband), it could be that you were having the problems stated because you receiver was desensing due to a too strong of signal in the area. I can't imagine, unless your antenna was shorting out the center conductor to the outside shield, that the antenna would work that poorly otherwise.

I live near a tower that contains lots of things all across the spectrum. I have a couple homemade antennas in the attic using nothing more than chassis-mountable SO-239 connectors and welding rods (total cost of about $3.00 per antenna) that still receives too strong of signals and either overloads some of my scanners or causes a lot of intermod.

Sometimes I think switching to the supplied back of set whip is the best choice in high-RF areas.

Tim--
I've owned maybe 40 different scanners both handheld and desk top. In
my opinion the absolutely best handheld is a Pro-43, although you will
be hard pressed to find it for your price. They usually go for around
$300. The next choice, frequently available at $200, is the Pro-39.

The Pro-43 is the only handheld that I've always kept at least one of
(that and a desktop Pro-2004 are my favorites). I would love to hear
from others on this question.

You can get it from the people who make it:

http://www.forteinc.com/agent/index.htm

Or from lots of other places:

ftp://ftp.enterprise.net/pub/mirror/winsock-l/news/fagent10.zip

ftp://ftp.keme.co.uk/pub/winsite-mirror/win3/winsock/fagent10.zip

ftp://ftp.cdsnet.net/pub/mirrors/papa/winsock-l/news/fagent10.zip

ftp://ftp.channel1.com/pub/winsock-l/news/fagent10.zip

ftp://ftp.frontiernet.net/pub/mirrors/winsock-l/news/fagent10.zip

ftp://ftp.harborcom.net/pub/winsock-l/news/fagent10.zip

ftp://ftp.infomagic.com/pub/mirrors/PC-Networking/WinSock-l/news/fagent10.zip

ftp://ftp.iquest.com/pub/windows/papa/news/fagent10.zip

ftp://ftp.midtenn.net:/pub/mirrors/winsock-l/news/fagent10.zip

ftp://ftp.net-connect.net/pub/win/winsock-l/news/fagent10.zip

ftp://ftp.net1comm.com/winsock-l/news/fagent10.zip

ftp://ftp.winsite.com/pub/pc/win3/winsock/fagent10.zip

ftp://mirrors.cu-online.com/pub/mirrors/winsock-l/news/fagent10.zip

ftp://papa.indstate.edu/winsock-l/news/fagent10.zip

It's a fine piece of software and the commercial version is even better (and a steal at only 29 bucks).

No connection to Agent/Free Agent (other than as unpaid beta tester).

Gents,
I am new to scanning and interested in getting a receiver that will receive the PD, FD, rescue, portable phones, cel phones, etc. I have looked at the BC 860XLT and am thinking of getting it plus a ~$40 mod for receiving cel freqs. Is this a good idea or should I try to obtain a receiver made before 94? Your comments are appreciated.
Tnx, Jim

Well, its happened again. The Sultan of Shoddy, the Master Bator, the Tyrannical Tinkerer,
the Avatar of Anal, and the lover of other peoples dirty underthings has come back to the group to try his hand yet again at disrupting things.
And also again, my mailbox has gotten no less than 31 emails requesting the return of The Cheek Daily Digest, a compilation of the best, most hilarious rantings of a man with not a great deal to do anymore (having shot his wad on those first two book -thingies, re-hashing it all in his third, and undoubtedly contriving ways now of putting it into a fourth to sucker all those teenagers out there with a 60$ Radio Shack scanner).
Anyway, if I get 50 requests the presses shall roll. Email if interested.

yes I too bought one for about the same price in a ad I saw it was
already modded for the cell & speedup mod..the only thing I noticed
was that when you look at the display the little - blinking curser now
blinks real fast is this because of the crystal mod??? thanks...

Well, at least we'll get to listed to Air Traffic Controllers for the
next 20-30 years.
They upgrade their equipment about as often as I change my underwear.
;-) I think that they're still using early '70's technology at many
sites.

>
No.

The principle of a Dipole is that it has two aerial elements. One acts
as the true aerial and the other acts as the counterpoise ot like a
ground. You can think of it as a mirror image of the aerial.

```
a
|
| The aerial

| The countepoise (mirror image)
| (it is this bit that is a "ground" substitute
a
```

The length from a to b should be a quater of the wave lenght
a to a should be a half wave lenght

The lenghts ARE critical to the frequency you want to listen to and to
optimise the dipole you should carefully work out the lenghts, also
taking into account the velocity factor of the material the dipole is
made from... All very coinfusing to a novice BUT, IF the dipole pulls
in the stations that you want it to ok, then sod the velocity factor!

Happy scanning....

I was just looking at buying a shortwave radio..but I would rather have a scanner.. My question is...can you get sw stations (like radio talk shows and the like) on a scanner if you know the proper freq. and if your scanner can handle it?

I would prefer Email <x-ray@cris.com> but anything will be appreciated.

Thanks

Erik

One of my more humourous listening experiences was the day OJ Simpson was to turn himself in at Parker Center. The local news media was all around the back entrance jockeying for the best camera positions and one station of not, Channel 13, was trying to secure a position across the street in a parking lot. The parking lot attendant wanted them to pay $10 for the space and either no one had any money or the station was too cheap to pay for it.

Of course the rest of the day was just as ridculous.

Rolo.

Well, there was the one a few months ago where a county highway unit got a call for "a young woman removing her clothing" on the side of the Long Island Expressway. Although this is normally a well disciplined agency, there were a lot of assorted "noises" on the radio. There were also many, many units offering to respond for back up. A supervisor (sergeant) had to warn everyone to calm down. The supervisor, of course, also responded to the call.

It's been a long time since I have done any antenna work, but as I recall, , , , The impedance of a system is dependant upon the output impedance of the radio. With a 1/4 wave ground plane, for an example, the position of the ground elements (the droopy things) will dictate the impedance of the antenna. 45 degrees down is about 50 ohms, and straight out (horizontal) was 75 ohms. The antenna should match, as closely as possible, the output impedance of the radio. Most radios (Transmitters as well as recievers) are 50 ohms, today. That is, if you want max efficiency. The *loss* incurred by the coax is dependant upon a lot of things. Here it's best NOT no scimp. Low loss RG-6 is good, and so is 6613. Just don't expect to get good performance from RG-58 :-{ bad news. Maybe some one out there can correct me if I'm wrong on this, , , , It's been a looooong time :-}

Just for your info, "hduff@hcol.humberc.on.ca" is probably in Toronto Canada where it IS legal to monitor cellular transmissions.

The "Canadian Radiocommunications Act, Section 4.(1)(b)" states it is legal to listen, but not share, or make use of, the information.

The problem in Canada lies with the manufacturers making scanners mainly for the US market, and therefore certain frequencies are blocked. They then sell the "blocked" scanners both here and in the US.

Meanwhile, I agree that it's wrong to restrict the reception of the radio frequency spectrum. Any part of it ... it's not really worth arguing about which frequencies are worth listening to. Because, if some can be restricted, your favorites might be next ...

And that's the big deal ....

Just my two cents worth,
Tim Tiefenbach

Its apparent by the major dance you're doing that the answer is clear
by now but just to have YOU answer the question...here it is again.
Typos corrected: YES or NO ? Do you hold a University engineer degree ?
No more dancing.

BC> There is no YES or NO, up to this point. You're playing games, Hubie,
BC> and so you will have to articulate the question excruciatingly perfect
BC> before I give you the YES or NO for which you're fishing. You asked a
BC> stupid question with obvious traps built into it. Sooooo, rephrase
BC> the question technically and grammatically correct, and I will answer
BC> it. Otherwise, you will have to be content to accept my experience,
BC> track record, professional memberships and peer/trade acceptance.
blah blah blah
No games here Bill...
Spare the membership/ acceptance garb.
Do you hold a University enineering degree ?

HD> >By the way, if you're so qualified and competent why did you have
HD> >someone else design and write the firmware for the CE-232 scanner
HD> >interface ? Why are you not able to tackle such a project on your own
HD> >Mr."Engineer" ? (You already told me it was someone else.)

BC> I told you several months ago when you LAST asked that stupid
BC> question, too. Are you so brain-dead that you can't remember? Geezus,
BC> Hubie, get your gourd defragged or something. I told you several
BC> times, direct and in general to the public, that about all I know of
BC> programming is that it comes on radio and TV. And I don't watch much
BC> TV or listen to broadcast radio.
blah blah blah

BC> Firmware is software, Hubie, and I don't wear a propeller on my ball
BC> cap. If I tackled software issues, then I'd have to let hardware
BC> issues lapse. So I hire help when I need it. Now please write that
BC> down and don't ask me that again.

So you can't program AND design hardware...shame.
Hahaha...hire help ? Hardware only ! From what I remember your
involvement with the original interface was limited to conceptual input
only ! Firmware (software) aside, tell us that it was YOU who designed
the original interface hardware.

HD> >it's because of the
HD> >arrogant, condescending and verbally abusive dialog I have witnessed
HD> >during past messaging with you...you sure rubbed ME the wrong way.

BC> Guess what? I am going to stick in your gullet even more, then.

Then put up or shut up...there's no squelching me here like you
do to those who don't kiss your 'cheeks' in true dictatorship style
like it is over on FIDO.

Speaking of FIDO...maybe it IS time, as someone else suggested that
the administrators of FIDO wintness and re-evaluate the dictatorship
behaviour and childish antics of a person who is supposed to be a
responsible moderator. You certainly don't fit the 'Bill'.

>
HD> >Hahaha ! Deflate that fat head or yours Billy....my wife wouldn't
HD> >touch you with a thirty-eight and a half foot pole...in fact she
HD> >wouldn't give you the time of day.

BC> Wanna bet?

Sure !
Like I said...she wouldn't piss on you if you were on fire.
She wouldn't get past your looks to bother getting to know that you're
an undesireable ego tripper in the world of Hobby Radio Scanning,
(like she'd really care).

> >HD> It was "acting like an asshole". And there will be no apology just as
> >HD> there will be no "you coming back". You're dead meat, Duffy-Baby.
>
HD> >Do you know what SATIRE is Billy ? Remember when you told me...
HD> >"I'll consider letting you back on FIDO if you issue an apology..." ?

BC> That was then. I changed my mind. After seeing how you START trouble
BC> here, I wouldn't let you back in on a stack of green cash.

Oooh ! My loss indeed ! My interest in your GESTAPO CAMP at this point
is limited to watching the poor technically hungry folk and spineless
individuals kiss your 'cheeks' and watching you tell the good people
how wonderful you are.
If you want to classify standing up to the BC BS as being a trouble
maker then I is one :) (<---Grammar intentionally fornicated.)

HD> > I'm still there on occasion just to watch you make a fool
HD> > of yourself and have been since I was expelled under my real name !

BC> You'll need to use an assumed name, and you'll wind up getting your
BC> SysOp booted if you're not careful.

Hahaha.,..I knew that one would irritate you.
You wouldn't know who I was now would you !? I've been a spectator of
the Billy-and-his-puppets-show ever since I lost access under my real
name.
Duhh...C'mon Billy, I wouldn't be so stupid as to jeopardize my SYSOP's
FIDO link by announcing my presence on ScanRadio like the town crier.
It's just entertaining to watch from a distance so to speak and thats
my only interest in it now.

HD> >Oh well...Let the anarchy begin !
HD> >Since the FIDO Scanradio echo is saturated hence you feel the need to
HD> >poison this domain then its Put up or Shut up !

BC> You started it anew, Duffster. I sure didn't come on here looking for
BC> you and your goodbuddy.........

NO Billy...YOU started it with your attitude back on FIDO and I never
got the chance to democratically support my views. What IS funny is
that you continued the thread long after my leave...
The "Conflict of Interest" discussion of which had everything to do
with my leave continued for some time thereafter.
Funny how the "Zero Tolerance" rule applied to some and not others.
I guess it depends on how hard the hit is eh Bill !?
You took a the discussion too personally and decided to use your power
as moderator to simply evaporate the source like a true DICTATOR.

HD> > This newsgroup is NEVER in a state of Anarchy until YOU show up.
HD> > Why is that ?

BC> Easy. You won't give it a rest. I posted a FAQ. You just had to
BC> show your butt. You could have kept your peace.....but you didn't.
BC> All because you have a sore patooty..... <poor Hubey>

Can you blame a man for wanting to have his say ?
No democracy on ScanRadio... The podium was closed for business
when you decided the topic of discussion was going to affect YOUR
wallet. It WAS on topic and had everything to do with bending
and breaking of the FIDO rules to suit you after you took over.

Anyhow, it is quite evident that the ONLY flames be it here or
on FIDO are between YOU and one of many other people.
The common denominator is YOU !
Attitude/BC = Trouble

: Personally, I think that they can be used without a problem during all
: aspects of commercial flight.

It doesn't matter what you PERSONALLY think, there is a rule against using them in certain phases of flight. When someone in the govt. makes a rule, it's a rule, regardless of the fact the you and I know it does not make a lot of sense. Besides, I would think that most airlines would allow scanners to be used as long as they are kept inside a carry-on bag (read: concealed) and listened to on headphones (hint, hint). And keep a supply of CD's or cassettes handy cause your scanner might need one to play on it. Do you think flight attendants would know the difference? Just keep you tray table in the proper position and they won't bother you. But don't try to listen to people talking on the airphones because not only is that illegal (what if you are not over U.S. airspace, though), but many of those phones are digital.

Hi,
Well your COMP 100 is an very interesting and unique scanner. I think it was the first programmable scanner RS offered. If you have the owners manual you will appreciate its unique Binary Coded frequency entry. If you don't, I can send you the programming info because you will need it.

I have a photocopy (not a very good one) of SAMS Scanner Monitor (not sure which volume or year) pages 96-124. It contains schematics, block diagram (same as owner's manual I believe), troubleshooting section and parts list. If you cannot find this at the local library (I'm sure you can) email me your street address and I can ship you a copy.

> Thanks,
> Marc Chouinard

Marc, a 1/4 wavelength is calculated:

feet=234/Frequency in Mhz

You did not say what antenna you would use. If you're using a dipole
fed with coaxial cable, there should be a 1/4 wavelength on both sides
of the center insulator, fed in the middle with coaxial cable. Orient
it vertically.
If you are using a ground plane, use 1/4 wavelength for the center
insulator, and make each of the 4 radials about an inch longer.
If you're just trying to figure out how long to extend your telescopic
antenna, use a 1/4 wavelength. That should be close enough.

I live near a military airspace (MOA) that is used for live firing for
many types of weapons. Along the Western edge, is a corrodor to allow
North-South civilian air traffic. One daya I heard the following
conversation between the airspace controller and a cessna. . . .
" Please get your hands, your feet and your damned airplane out of my
airspace"!!!!

I've got an AT&T 9300. I can only get half way to the bagel shop. :-)
Still, range is *much* improved over the old 46-49MHz one I had.

The newer Escort Courier 9600 advertises it gets "Up to 2600-foot range (1/2 mile)", but I have no direct experience. You can get a copy of their mini-catalog by calling 1-800-433-3487 24 hours/7days. Their lesser models (or older models) advertise similar range at better prices.

Hello Direct, another reputable outfit, sells a remote 900 MHz antenna for $60 on a 30-foot cable you could mount higher for increased range. You can reach them at 1-800-444-3556 or <http://www.hello-direct.com/>.

"Sidetone" can be a problem with these phones. That's you hearing your voice in your ear a bit loudly as you talk. That bothers some people a lot, others not at all. If you think it will bother you, attempt to try one out before buying or get a return privilege. They're expensive phones.

I would strongly urge you to get a spread spectrum model for your own security. I can get my phone on the scanner, but only as a hiss.

No connection to anybody who sells such things other than as customer.

3309. F.S. - Universal M-400 Decoder with computer interface for pager decoding

Newsgroup: rec.radio.scanner
Date: 1996-07-21 00:00:00 UTC
From: johnsw@mhv.net
Message-ID: <31f298ce.1549448@news.mhv.net>
Source record: 229111
Cross-posted to: rec.radio.scanner,rec.radio.swap,alt.radio.scanner,rec.ham-radio.swap

I have a Universal M-400 multi mode decoder for sale complete with CI-400 computer interface for monitoring / logging of pager data to screen and/or disk and /or printer. The unit is the latest software version - Version 2.0 and will decode the following:

Shortwave capabilities: VHF-UHF Capabilities:

Baudot ACRS
ASCII POSAG pager data
Sitor A&B GOLAY pager data
FEC-A CTCSS (PL) Decoding
SWEDE-ARQ DCS (PL) Decoding
Fax (To Printer) DTMF Decoding

The CI-400 interface interfaces the M-400 with your pc via an interface card for your pc and its associated software. Once these are installed, all the paging data is fed to your pc's display and you can set your pc to alarm when your preprogrammed cap code(s) are detected and the message will be highlighted, and/or saved to disk/printer for later viewing. Works real well ..... If you not sure what the unit's about check Groves home page for a complete description or e-mail me for any questions ..... Unit is in excellent condition and comes complete with manuals, software, interface, cables and a/c adapter. $325 for all

Bill Cheek has blown into this forum once again, and the shit--nearly all of it his--has started to fly. Ol' Bill posts his advertisements here for that weird little, over-priced gizmo he sells, calls them a FAQ and "useful information" and tells us that we should be grateful. What's more, Billy Butt has climbed aboard that altar he's built for himself to proclaim his intellectual and moral superiority over all.

Now, there are bound to be many people on rec.radio.scanner who has never heard of the ol' butthead who calls himself Cheek, so gather 'round y'all while I tell you the life story of this consumate asshole.

The Life and Times of Butthead Bill, Part One

Cheek was born to a poor family so far on the wrong side of the tracks that even the dogs stayed away, knowing that Cheek and his kin would eat them. When Cheekie was small, he, like most toddlers would piss and shit in his diapers. He'd cry and his mama would take his diaper off, put him in the kitchen sink and wash his little pee-pee and his bum. Soon, Cheekie began to look forward to these little washes, so he would deliberately piss and shit in his diapers and later his pants so that mama would wash him. It felt soooooo good!

Well, mama was a well meaning sort but she wasn't too bright (a sad consequence of her mother and father being brother and sister). She washed ol' Billie Boy for several years and it was only when Cheek got to be too big (about age 16) to fit in the sink that she suspected something was wrong.

About the same time, Cheek dropped out of high school to join the Navy. He'd heard that they had boats and he wanted to see what one of them looked like. There wasn't much to see in the back woods cave where he grew up, and he thought that it would be nice to be at sea surround by a bunch of horny sailors.

The Navy taught Bill a thing or two about fixin' radios and Bill decided that he must be some kind of genius. Why, if he tried real hard, he would read up on the articles and books that the Navy gave him. One day, ol' Butthead figured, he just might be able to copy down some of that ritin' and compose of book of his own. Lordy, maybe he could be rich and famous!

The Navy didn't suit ol' Bill for long. They expected him to get out of bed in the mornings, brush his teeth, wash his own ass, and generally behave like someone who was brought up in a decent family. That was asking too much of Bill, of course.

He decided that with the knowledge that he acquired in the Navy he could start a world famous enterprise and sell resistors, capacitors and what

not in little bags. He figured Lord willin' he become a giant in the gigantic and powerful scanner industry.

Bill knew his luck was running hot when he got off the boat, he happened to step on dry land. He headed down to the red light district, hoping to find his sister, so he could get a place to stay. Along the way, he met Sun Bunny, a woman just like his mother (and completely unaware that staying the sun every day for hours at a time causes skin cancer). Sun Bunny worked hard along Bill to help him build a shack out next to the airport. In those days, she'd do anything for a buck. Of course, the younger the buck the better but she wasn't particular because times were so hard.

Stayed tuned for part two. I'll tell you about Gyro Gearloose contraption that inspired Bill's world famous watchmacallit, Bill's diligence in learning how to read and right, and his continuing struggles with his bowels movements.

Well, I have several of Cheek's books about scanner mods, and I find them informative and interesting. Granted, he can be a little crass and bombastic, but no one else has come close to his work in the Scanner Mod segment of the hobby.

I try to avoid these flame wars that seem to erupt whenever Cheek, Moss, or some others post anything. I wasn't around during the Fido Wars, but read more than I wanted to know about them. I just wish these guys would knock off the flames. I don't know or care who started them, or who said what to whom, I just want to read about scanners, radios and frequencies.

I'd like to hear of experiences anyone has had with using audio frequency digital signal processing units to clean up the audio on scanners. The units are marketed more for use with HF than VHF/UHF, but someone is certain to have tried it on his scanner.
I would also like to know what results people have had with using graphic equalizers (marketed for home stereos) on their scanners.
Thanks,
Kdb

Actually, there were rarely any flame wars or problems untill Bill Cheek became the moderator. THEN, the problems started. Gee, Bill, maybe your memory is bad. If you want I could e-mail you the messages I saved of people telling you to STOP trying fix problems that weren't on there on the echo. Face it Bill, you were just trying to get rid of ANYONE who didn't think or act EXACTLY like you because you saw them as a threat. Do you remember how many people asked you to put the moderatorship up to a vote??? You refused, due to the policies of Fidonet, you were able to.

> Well, yeah, but that was due to the likes of ol' Hewbie Duffster and
> cronies who had the idea of sinking the whole forum. Once they got

No Bill, the forum nearly sank because there was such little traffic on it AFTER you became moderator that if you hadn't called in your little buddies to help out & create traffic that it would have gotten kicked off the backbone.

I STILL don't see anywhere near the amount of traffic on that echo that there used to be before Butt Cheeks became the moderator.

Why can't you stop Lying Bill?

I suppose now you are going to complain to my sysop again. That shows how little of a man you are.

HD> >One of the scanners was obtained in that state and I could not confirm
HD> >the reason for the faulty CPU...

BC> Bad solder joint, not a bad CPU.

WRONG again Willy...this one WAS likely tampered with and the CPU
got the wrong end of the jolt. The other 2004 with the problem CPU
one was indeed one of self destruction...believe it or not.

HD> > it very well could have been caused by
HD> > someone trying to perform a "Cheek Mod" :)

BC> Which one ?

Hahahah !

HD> > I suspect that the heat may have affected
HD> > the CPU and it began to act flakey.

BC> CPUs don't act flaky. but defective solder joints do.

What ? Have you been working around Radio Shack scanners only
for too long? You are obviously lacking in electronic repair
experience. But then again, you were always an "Engineer", weren't
you !
I've seen my share of 'flakey' I.C.s that I've had to replace
in my previous years of Aerospace/Avionic repair...CPU's,
or discrete logic/analog. And that Billy-Bob is in the world of
Military rated electronics. Can you just imagine the failure rate
of I.C.s in consumer electronics !?

Get your head out of that PRO-2004 and come up for air !
You are proving to be not so knowlegeable in electronic
troubleshooting/repair. I'd quit as damage control before book sales
drop off to nill !

BC> >> Chances are, you did nothing more than repair bad solder joints.

HD> > Don't think so Willy...I have the sense to have systematically exhausted
HD> > the obvious before concluding that the CPU was bad.

BC> Defective solder joints are not obvious.

I think we all know this Willy. Like I said, the obvious and notorious
were well checked before I made my conclusion.
Put a hold on the DICTATORSHIP style of telling ME what I really saw.
I'M TELLING YOU...THE CPU WAS BAD ! I WAS THERE...in living colour.

HD> >Furthermore, a good quality machined socket was installed on the CPU
HD> >board....the scanner worked with the new CPU and didn't with the old
HD> >one. Go figure !

BC> Ahhhhhhh! So WHY was a machine-pin IC socket installed there? The
BC> scanner did'nt come with it !!! Thus, it was made to go bad, or
BC> thought to be bad when the original problem was a bad solder joint or
BC> a bad via. Obviously, if the CPU has to be pulled, anyone with a bean
BC> for a brain won't want to go through that terror again, so in goes the
BC> socket to make life easier "next time".
BC> Next, you'll tell me the pin spacing is a standard 0.1".

Hahaha...trying to catch me in a lie or make me look stupid like you
have been doing to yourself. Give it a rest Willy. I'm familiar
enough with the scanner. The usual .07" spaced 64 pin socket was used.
The reason it was installed was to enable me to test the new and old
CPU's without having to solder and desolder so to chance lifting any
pc board traces after several cycles of this.
BTW...there is no "terror" in removing IC's of this nature. Shame a
fellow like yourself who claims to be the almighty Scanner Whiz
"Engineer" has a phobia with this.

BC> Ummmmmm, FYI: The PRO-2004 has a very conservatively rated CPU. It

Oh ya, I forgot...you were part of the engineering team who did the
die-fab design on the GRE-0327 weren't you ! :)

BC> is eminently capable of operation under elevated heat.....so long as
BC> the clock runs at 7.37 MHz. I repeat again....that CPU was made to go
BC> bad or it was misdiagnosed because of a faulty solder joint. No doubt
BC> it was fritzed by the time it got pulled out - a job worse than a root
BC> canal.
BC>
BC> Suit yourself, though.....
BC>
BC> -= Bill Cheek =-

I wish all electronic components were as reliable as you claim them to be.
CMOS parts are notorious for showing signs of malfunction due to
mishandling from improper repect for their fragile static sensitivity
even years after installation and perfectly normal operation.
Problems often tend not to show up for some years later.
Yer' corner PC computer shop is a prime source for such mishandling
as they unknowingly toss boards and RAM around like they are no more
fragile than the metal case they get fitted into.

Just because the only CPU failures that you experienced were self
inflicted, you should not discount the possibility of a faulty CPU
occuring to someone else. (Did your big fat uncoordinated fingers drop
a screwdriver inside the scanner ? :)

Granted, the 2004 is notorious for poor solder joints due to the bad
run of wave soldering however, don't be so close minded as to suggest
that it WAS indeed the problem and not a faulty CPU. I know what I saw.

I WAS THERE !

"Ya Joe, I had a bad solder joint so I replaced the CPU and the problem went away !"
The old cpu was installed and the scanner didn't run. The new CPU was installed and the scanner did run. This was repeated enough times that I was convinced the original CPU WAS at fault.
Never a problem ever since. As I said...Go Figure !

I care not to argue with you over this any further.
You obviously want to call a sunny day at noon 'midnight' in your usual stubborn pompus arrogance so we'd be hitting our heads against the wall to keep going on this one but if you insist...

Hopefully this is the right newsgroup for this...

I'm thinking about getting a 900MHz phone ... What kind of range can I expect with one? I've heard varuios estimates from 100 feet to a mile "under ideal condtions."

I work from home and would like to be able to run down to the bagel shop three blocks away without worrying about missing calls.

Also, does digital spread spectrum really increase a phone's range, or does it just offer better protection against snoopers?

thanks,
-derek

> Marc Chouinard

Others have left info on the formula. I have a shortcut. A few years ago I bought a Radio Shak whip antenna with a magnetic base that was cut for about 150-155 MHz (which used to be a common public service band). Works great for RR freq's.

You can also try a 144 MHz (2-meter HAM) antenna, although not as close in frequency, it might work for local traffic.

Which is the way it is supposed to be when one isn't all that
interested in something. I sure don't read everything that's posted
here or put into a magazine or newspaper.

> I was actually commenting on Michael's causing it to be reposted
>while complaining of it's verbosity....doubling the crime sort of.

Yeah.....that intrigued me, too. My gut feel is that he's not all
that comfortable with network messaging and maybe doesn't know how to
use his editor all that well. Otherwise, he's up to his old tricks of
"much ado about nothing" that he started a few months ago when I was
in and out of the newsgroup a lot.

>As to your assertion that only the first few lines were
>advertising........well I cannot argue.

Well, there was a mention of new lowered prices. The rest was a
technical discussion of facts, features, and specs about the CE-232.
At the end were some paragraphs on tech support and warranty, which I
suppose could be construed as advertising, but which really are more
facts of the sort that would be asked about, if not mentioned. So
what the heck.

>Anyway I must admit that I could not care less about advertising on
>newsgroups. Some I read : some I dont. It's all information.

Likewise, it's no skin off my nose when others post their ads here.
Some I read, some I don't. Some will cause me to eventually buy; some
won't. Who cares.

The thing that should raise eyebrows is how various companies send
SHILLS to this forum to act like private hobbyists and tout certain
products. THAT is where things get downright underhanded and dirty,
if you ask me.

>So what's the deal with this CE-232, anyway? It sounds like about six
>bucks worth of parts soldered together and sold for a couple of
>hundred. Is the CPU that expensive, Bill?

Yes. As is the socket, the RS-232 chip, the handful of other chips,
not to mention the electrolytic capacitors and the printed circuit
board. Then there is the 100-page Manual. There are a good dozen
other costs to add in, but the picture is not as you liberally paint
it.

> BTW, if you send a copy of
> the product to just about any magazine, they will revue it. At least
> if the product is of any worth at all...

THAT is patently untrue. Much depends on if you advertise with them.

>Also, your scanner FAQ was little more than blatant advertising. I am
>not going to promote your business by discussing exactly what parts,
>either, so don't even ask.

Then don't levy the claims that you can't back up.

>Please take your little flame wars to e-mail, Bill. This is not the
>place for it.

Gosh, that WOULD be nice. Like, it would have been nice for you to
e-mail me instead of posting in public. But you chose the public
forum, so that is where my reply is. THAT is ALWAYS the case. As
soon as Misters Duff, Boe, Alexander, et al, wish to take it to
e-mail, then that's where it will be.

They fired the opening shots, fella, so it's up to THEM as to where
the action will be. Like....now....YOU -=chose=- this forum. You
COULD have practiced your preachments and chose e-mail, but you
didn't. And THAT is one glaring fact, doode.

Well, the ones in question are on 72 MHz, not that it makes a lot of
difference. But the repeater on Mt. Otay doesn't compute for local
radio control, to my way of thinking. In fact, that could prove to be
dangerous as hell, no?

Listening to that signal.....sounds a lot like a pager signal, but
"sounds like" doesn't get it, for sure.

Rohr isn't spread all over the county like some of the aerospace
companies here, so what else could it be other than a pager? Assuming
that long distance RC is out of the question....

Do you have a physical disability or sensory impairment? Would you like to make new friends with people all over the world? If so, the Courage HANDI-HAM System can help you!

The Courage HANDI-HAM System is a non-profit international service organization which assists disabled individuals in obtaining amateur radio licenses, radio equipment, and hands-on help.

One of the premier services of the HANDI-HAM System is a semiannual Radio Workshop. At Radio Workshops, disabled individuals work intensively for one week on mastering material to pass amateur radio license exams or improving their radio operating and computing skills. There is also plenty of time for camaraderie and fun!

A Radio Workshop session will be held from August 25 - September 1 at Courage North, a beautiful camp area near Bemidji, Minnesota. All services are provided - instruction, recreation, food, lodging, and caregiving. The total cost for the week is $160 (you must make your own transportation arrangements, though), and scholarships are available to those needing financial assistance.

There are still a limited number of spaces available for this session. If you would like to get started in ham radio, upgrade your present license, or improve your operating skill, we would love to have you join us!

For more information about Radio Workshop or the Courage HANDI-HAM System in general, contact:

Courage HANDI-HAM System

Don't ever make threats. This crap started long ago. Now a few assholes start the mud slinging.

Let's take a look at past events.

1.) a reader posted a question about computer scanning.
2.) a few other readers responded.
3.) Bill posted a technical artical about the CE-232, yes there was some information about where to get
information, nothing wrong with plugging a product. This is America, not Russia.
4.) Out of the woodwork come PjB, Hugh, and now some asshole threating me to back off. None of these
people with the exception of attempt to make any attempt at providing any input to the newsgroup
but to flame Bill Cheek and to go as far as to flame any person who corresponds or disagrees
with their view.
5.) Now I have threats placed against me. I do not take them lightly and steps have been taken to stop
John. There are protections in place for people who do this. I have been through this before
and when I or my family is threated I will take action.

>this.
>

Well, I can attest to this. On the US model (don't know why the Canadian would be different), you can pickup half of cell calls on the frequencies mentioned. Some of them are quite mundane, but others are intersting (especially when you have to make up half the questions yourself<G>).

I hate to disagree Jim, but my RS discone works SUPER with my BC3000xlt
in a medium sized city area-Austin,TX.

In fact, it's a major improvement over the rubber ducky and allows me
to hear police, fire, highway patrol, C.B., air, just about anything
all over the city. Of course, the BC3000 helps a hell of a lot too. But
the RS discone works as advertised for me.

The discone is mounted in the attic of my condo with a fairly long run
of coax to the scanner(50 ft.). So it doesn't have to contend with the
elements as outdoor antennas would.

I know it's fun to bash Radio Shack, but in this case the product
satisfies. Just my nickel's worth (inflation).

Cheers, Ron Cain

Here in NJ there was a very low priority call on a very busy police night after a large snowfall. The police responded because they're required, but dispatcher and unit were obviously pissed off with the waste of time. The *extremely* sarcastic conversation went something like this:

<Dispatch> 550, respond to 3015 Katelyn Court. Complainant claims there are kids outside throwing snowballs in the direction of moving traffic.
<Patrol 550> Received 237. 550 will be en route to that. Do we have a description on the perps?
<Dispatch> That's affirm. Three kids roughly 13-15 years of age.
<Patrol 550> Received 237. I'll be on my way immediately.
<Dispatch> Received 550. Chopper 1 has been dispatched to that location.

Needless to say, there is no chopper in my township. This is an example of a highly unnecessary call directly after a blizzard. FYI, the kids never got caught either. :)

DP>>> Why does every one want to restore cell phone frequencies on their
DP>>> scanners? Am I missing something? It seems rather boring to sit and liste
DP>>> to someone gab on the phone. Roger

DP>>That much is right on the money.....it isn't entertaining or
DP>>educational to snoop on phone calls. There is a greater principle at
DP>>stake here, however.

Principle, schminciple...

DP>>You see, the RF spectrum extends from just above DC to beyond
DP>>Daylight. RF pervades the planet; crosses your property; passes
DP>>through your body; enters your private boudoir; and even penetrates
DP>>your brain, your heart, and the "valuables"..... You have no control
DP>>over this cacaphony of RF.....but you should have the right to detect
DP>>it and to determine for yourself if it, or its content, poses any
DP>>danger or jeopardy to your life, health, security, and pursuit of
DP>>life, liberty, and happiness.

You HAVE the "right" to listen but are too busy being righteous and
complaining to notice.

DP>>The government says you may not detect certain radio waves. Isn't
DP>>that a lot like being -=forbidden=- from looking in certain directions
DP>>as you walk down the street? Or listening to people's conversations
DP>>if their voices penetrate your ears? Or wiping bugs off, if they land
DP>>and crawl around on your body?

Insofar as the U.S. government "forbidding" things, the blockage of
cellular telephone frequencies in scanners pertains to SELLING of
scanner receivers across U.S. state lines. SELLING. SALES.

DP>>It isn't so much the craving desire to listen to cellular
DP>>conversations as it is the utter, imbecilic stupidity of being
DP>>forbidden to tune a radio across the RF spectrum. It is another
DP>>example of the inexorable erosion of our fundamental rights and
DP>>liberties.

Nonsense. Too many want to evesdrop, to become aural peeping toms,
to hear what the communicators think are personal and private.

Naturally, the peepers get all unglued when they are deprived of
their jollies and rationalize all kinds of "human rights reasons" for

being blinded in their ability to peep.

DP>>The desire to restore the blocked cellular bands in scanner receivers
DP>>is only a manifestation of a type of rebellion or fierce disagreement
DP>>with the mounting attacks on our liberties and freedoms.

Merde. Peeping is peeping regardless of the invented rationales.

Peep shows are available for those who want, or NEED it, and I don't
see anything in the U.S. FCC Rules and Regulations that "forbids" the
listening to anything in the spectrum. There's only the interstate
sale of new scanner receiver regulation. You NEED a cell phone
peeping thingy? Build it.

I built my own VHF scanner for the international civil aviation band.
So far, I've not "needed" nor have I much interest in other bands.
To each his/her own. Just don't wrap it up in some sort of "human
rights," "freedom," or "liberty" bunting, ok?

DP>>The issues in this matter run deep and they are anything but in your
DP>>best interests.....

Yech. Let's all go back to scanning as a HOBBY, not some side trip
into "rights." Lord knows there's plenty of flaming left on which
scanner blows the other scanner model out of the water.

I have a Uniden 9200 Digital Spread Spectrum Phone and get a range greater than one block.

There are several factors to consider:

1. What is the size of a block. My interpretation may not be the same as yours.

2. Placement of the base unit. For better range place the base unit next to a window but avoid direct sunlight.

John you are totally wrong. At the time the war started, Bill was not the moderator. Ken Storm I think
was the Moderator. But, he vanished. Then Andy Moss came on the scene and all hell broke out. I can't
ever remember seeing you on the echos at the time. So you must be getting your missinformation from
the other cronies or you are reading the crap the PjB likes to put out. He would make a great writer
for the Reich, he is great at taking quotes out of context, lieing, and just general bullshit. Maybe, you
should just go back to where you belong and stop the threats.

3366. T1000 battery hack...

Newsgroup: rec.radio.scanner
Date: 1996-07-21 00:00:00 UTC
From: eudoh@crl.com
Message-ID: <4suka8$h7d@crl3.crl.com>
Source record: 229285
Cross-posted to: misc.wanted,rec.radio.scanner,rec.radio.misc,rec.radio.swap

Toshiba T-1000

B A T T E R Y H A C K

This is a basic battery modification or hack for the Toshiba T-1000
laptop which allows you to use AA (alkaline or Nicad) batteries.
The nicads are preferable since I've found those to last longer, and also
to be rechargeable using the 9 volt DC power brick that is used with the
laptop.

The main required item is the black, 4 - AA battery battery holder, used
originally for the CMOS battery backup in the early AT's before the new
battery packs (which included nicad batteries) were put out.

```
black red
= (-) = (+)
cut = =
------------------|---=--------=-----
| - | + | - | + |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| + | - | + | - |
------------------|------------------
cut

= = = =
= = = = = = =
= (connection 1) =
= =
= =
= = = = = = = = = = = = = =
(connection 2)
```

Required Items:

.1 Toshiba T-1000 battery
.1 4 - AA battery holder (Radio Shack 270-391)
.1 small saw or etco blade/knife
.1 30-35 Watt soldering iron

.1 Standard rosin core solder
.1 Piece of small gauge insulated wire
.1 Screw (same size of that used in the battery compartment but at least
1/4" of an inch longer.

The first order of business is to cut the holder in half at the "cut"
point indicated in the picture above. The saw worked best for me.
Be careful not to cut the black wire which is represented in the photo above
as "connection 2", unless you don't mind soldering or piecing it back together
later. You will have to cut "connection 1" and solder a piece of insulated
wire between it.
At this point you will need your original battery. First, cut all 4
leads going to the battery as close as you can get to the battery. Solder
the 2 black leads together with the black lead coming from your new battery
pack. Solder the 2 red leads together with the red lead coming from your
new battery pack.

The Modification is complete at this point.

UPDATE:
If you have an internal modem installed, please proceed, but ignore section z
below...
If you don't have an internal modem installed, please skip to section z below.
You will not use the T-1000 battery compartment, but will need 2 pieces
of cardboard to pad
the area beneath it 'cause the 2 pieces of the battery holder will
be laid flat. So a piece of card board beneath and on top of the battery
holders to prevent anything from possibly shorting out either the motherboard,
internal modem, or battery holders.

z.
Placing the 2 pieces of the battery holder "back to back" will allow them
to fit in the T-1000 battery compartment.
The battery lid will not go on unless you replace the screw with one that
is a little longer.

Thank you and enjoy....

Joseph - USE MARGINS OR LINE ENDS!!!!

I am sorry if you don't remember me being on the Scanradio echo. I kept a low key profile most of the time. I don't remember you either. You are partially correct. Ken Storm was the Moderator, then he left the echo with out a word or any trace of what happened to him (he did the same to the CB echo which led to me becoming asst moderator). I was there & saw it all. When the dust settled from Ken leaving, Bill Cheeks became the moderator. For a while he was kicking out a person about every other day. I was one of them. Obviously I must not have been much of a bad guy or you would remember me. Bill kicked out anyone who was a threat or didn't kiss his ass like he thought it should be. Perhaps you should go back to where you belong (kissing Bill's ass or sucking him off) untill you get your facts straight.

> I would like to know where this notion of 'Bill's buddies' kept the echo alive. Wake up and smell the

Really? Then how the hell did Roger Cravens end up back on the echo?? THere were other "Bill's Butt Buddies" too, like Blake & others. You better go. I think the lack of oxygen from having your nose Bill's ass has schrewed up your thoughts & memories.

We can't all be wrong & you & "Bill's Butt Buddies" are right.

Does anybody have an updated status of which carriers permit the use of handheld scanners on domestic/international flights?

I know that Delta DOES allow their use upon reaching cruise altitude. They must be turned off during taxi, takeoff, approach and landing. Personally, I think that they can be used without a problem during all aspects of commercial flight.

Any thoughts?

Thanks

I have a favor to ask of the 'groupies of rec.radio.scanner...
I was wondering if anyone could give me specifications on the radio shack line of scanners... specifically the Pro-39 and Pro-43...
I went to my (4!) local radio shacks and asked for specs... they couldn't tell me anything... they said to go look in their little book thingys... and (no surprise here after the 2nd store) all 4 stores were mysteriously missing the scanner sections out of their communications/radio booklet thingy...
so if anyone could give me specs, or point me to a site where they have specs listed, I would be thankful!
Derek

>re: CE-232 Advertisement.

'Er.....Press Release. Big difference. Read it again.

>Geez, for a guy who is so well off from his previous years of high
>ranking employment you sure are getting agressive with CE-232 marketing.
>Wussamatter...is the FIDO market saturated ?

No market is saturated. I went on a cost-cutting mission, and acquired parts and materials at much better prices than were ever before available to me. In turn, I was able to shave the price by a substantial margin. People have a right to know about things like that. Ok, so you're not interested. That's cool.

But, I'm not a multi-million dollar company like Optoelectronics who can afford full page ads in all the rags from here to Timbuktu. And then "hire" shills to frog onto forums like this one, touting their stuff as if they were regular hobbyists. Me....I was up front with it all the way, Mr. Duff. No shills. No hype and hyperbole.

But we feel the CE-232 is a very competitive product, and that it does things others can't touch. Fer instance, the CE-232 can AutoProgram the scanner with as many frequencies as it will hold, hands off, nice and automated with no errors..... The CE-232 can also operate remotely from the scanner, and even be disconnected from it.....

AND PLUGGED INTO ANOTHER SCANNER while the first one is being used for something else. If you have two scanners and want the Optoelectronic interface, then you have to buy TWO of the Opto units..... not so with the CE-232. Just one itty bitty CE-232 can serve any number of supported scanners.

Because of the drastic price reduction and the fact that the CE-232 is not widely publicized by the press, I thought it quite appropriate to make a Press Release about it. Sorry if you disagree..... 'Sniff.

And here is another matter for you to gnaw on..... I don't have mega-dollars to spend on advertising, so I can't get any of the major magazines to review the CE-232. (You have to spend the money first to get a decent review.) Soooooo, what are the alternatives?

One alternative was to issue a Press Release in this forum. I spent considerable time making it tasteful and 99.5% informative.

Try reading it again and tell me EXACTLY where you take issue with it. I'm open to justifiable criticism.....I'll make it better. Just tell

me EXACTLY where, ok?

Bill

>and education ?

Did you bother to read it? I'd say is was loaded with VALUE and
information.

>"Here's what I can tell you about and here's how you
>can get in touch with me to find out how to find out more..."

Yeah? I cut those parts out. I've been sending out that FAQ for six
months now, and you are the first to snivel about it. But you pop off
over anything I post. <shrug>

>No anarchy over here until YOU showed up Bill.

And YOU being on a "mission".....just couldn't stifle yourself, huh?

>Ask yourself why I am so mad with you

Actually, I wish you'd get a little madder and DO something besides
flatulate all over this forum.

> (and I'm NOT the only one who finds you repulsive).

True, you do have gooooooood company. Just look at the likes of 'em,
though. Whooooooooey, I'd run like a striped-assed ape, if I were you,
DuffieBaby. A man gets known by the company he keeps.

> Don't believe it began when you extracted
>me from FIDO in a Dictatorship style...

Noooooo, DuffieBaby, not dictatorship style. You BROKE THE RULES and
got evicted by an *authoritarian* style.

> the animosity started well before
> that. The FIDO release only reinforced my realization of how much an
> arrogant-pompus person you are.

<Yawn> Your duff, Duff, still smarts from that Size #13EE that I
placed on it, crosswise..... You just can't stand it.

<giggle>

That's going to stick in your craw until the cows come home, ain't it?

<snicker>

<cackle>

<horselaugh>

>BC> professional......33-years worth, at last count. And I can spell,
>BC> too! And you IGNORED my question. You're playing games, Duffster.

>NO games played here Willy...YOU are the one doing the dance.
>What question did I ignore ? Was it my statement that you are not the only
>knowledgeable scanner buff around town and your pompus arrogant reply of
>"oh ya...tell me who ?" Well I prefer not to drag others into this so
>let me say that it is of my opinion and retract the statement for that
>reason only (not that I agree that you are any kind of scanner god).

You can think whatever you want, Hubie. I don't profess to be a deity
of any sort. I -=am=- a master of several subjects, scanners being
one. But mastery is relative. I just wanted to know WHO else you
thought was relatively proficient.....since YOU -=did=- make the
direct reference to 'em. It became a "we", and I want to know who
this "we" is.

>So now that I've cleared that up...YOU stop with the games.

You didn't clear it up. You crawfished. You shot off your mouth and
then failed to back it up.

>Why don't you you just answer YES or NO...Are you a Engineer ?

"a Engineer"? (Duhhhhhhh are I a engineer?) Is English your native
language? If so, don't play the syntax and grammar games on me.
English is my native language, and I am a relative master at it, too.

>I don't care to hear that you have X number of years in Engineering
>environments so that qualifies you as one in your own mind.
>YES or NO ???

There is no YES or NO, up to this point. You're playing games, Hubie,
and so you will have to articulate the question excruciatingly perfect
before I give you the YES or NO for which you're fishing. You asked a
stupid question with obvious traps built into it. Sooooo, rephrase
the question technically and grammatically correct, and I will answer
it. Otherwise, you will have to be content to accept my experience,
track record, professional memberships and peer/trade acceptance.

>By the way, if you're so qualified and competent why did you have
>someone else design and write the firmware for the CE-232 scanner
>interface ? Why are you not able to tackle such a project on your own

>Mr."Engineer" ? (You already told me it was someone else.)

I told you several months ago when you LAST asked that stupid question, too. Are you so brain-dead that you can't remember? Geezus, Hubie, get your gourd defragged or something. I told you several times, direct and in general to the public, that about all I know of programming is that it comes on radio and TV. And I don't watch much TV or listen to broadcast radio.

Firmware is software, Hubie, and I don't wear a propeller on my ball cap. If I tackled software issues, then I'd have to let hardware issues lapse. So I hire help when I need it. Now please write that down and don't ask me that again.

>BC> Labels and titles, Mister Duffster, are for those who don't know what
>BC> the hell they are supposed to be doing. But let's put it in another

>Tell that to the good folk who invest countless years in education
>to qualify them to use labels and titles.

People can use whatever labels and titles they want, don't you think? Especially those of us with both an "investment" and a track record? Eh?

>I do design Engineering but admittedly don't have a University degree
>in Engineering so therefore have no right to be so bold as to label myself
>as an one (nor belittle those who do).

Well, then.......stop belittling me for starters. But once again, you fail to practice what you preach.

> I only asked a question and you are the one playing games Bill.
> Your attutitude is what rubs people the wrong way.
> You're just so damned high on yourself.

I wasn't.

Not when I came in here to drop off that FAQ. You challenged me once again for no damn good reason, so what the hell? When a sicko crawls out of nowhere, on the prod....picking and poking - yer dern tootin, I get high on myself. YOU make ME feel dern good, almost orgasmic, to where I have to mutter that famous prayer, "There but for the grace of God, go I....."

>If you want to know why I'm on this mission

Ahhhhhhh, there we have it......A MISSION! A "crusade".

>it's because of the
>arrogant, condescending and verbally abusive dialog I have witnessed
>during past messaging with you...you sure rubbed ME the wrong way.

Guess what? I am going to stick in your gullet even more, then.

Whatever your complaints of the past.... I dropped off a FAQ to the newsgroup this week; and said nothing to or about you. But you leaped in with both feet AGAIN. It's YOU who's not giving it a rest, Duff.

>Your horn blowing and overinflated fat-head need to be brought back to
>Earth.

And you're THE MAN to do it, I take it? <giggle> What deity appointed you?

>You are NOT the SCANNER GOD you think you are. Get a grip on reality.

I don't place labels like that on myself, HubieBaby. You did. Reality is this: -=I=- wrote the books on scanner re-engineering.

THAT is -=real=-, my envious antagonist.

Also real is that all you can do is attack. After all, YOU'RE on a "mission".

I -= do =- things of sum and substance in this field. YOU attack those who -= do =-. My having the balls to -= DO =- something rubbed you the wrong way. There's a sicko like you in every crowd. The FUNNY thing is.....is that if you were really rubbed right, you'd REWRITE the books on scanner hacking and REALLY show me how it is.

Pity that all you're really capable of is....potshooting and backstabbing from behind cover.

C'mon, HubeyBaby, load up your lugnuts in a wheelbarrow and belly up to the measuring stick; unzip and fish it out; lay it on the stick and let's SEE what you're made out of. DO something that COUNTS on your own merit; run your own race in your own lane; in your own track shoes. Surf your own wave and get off mine.

You want a piece of my ass, pal? Then belly up to the stick and whup it out. I mean REALLY show me up. Gimme a run for my money. Let's see what a badass you really are. DO something that COUNTS.

This old world is full of two kinds of people, Duff:

Smart fellers
Fart Smellers

Belly up to the stick, son, and let's find out which one you are.

Wanna bet?

>HD> It was "acting like an asshole". And there will be no apology just as
>HD> there will be no "you coming back". You're dead meat, Duffy-Baby.

>Do you know what SATIRE is Billy ? Remember when you told me...
>"I'll consider letting you back on FIDO if you issue an apology..." ?

That was then. I changed my mind. After seeing how you START trouble
here, I wouldn't let you back in on a stack of green cash.

>(I replied..."not likely !!!") Ya...I'm "dead meat" alright..haha !

Yup. History.

>Was it hitting you in the funnybone (or pocketbook) with some technical
>questions that you couldn't answer that humiliated you into a rage of
>expelling me (without notice I might add...hence the new "Zero
>Tolerance" rule...ooohhh !) that put you off the deep-end ?
>What was it now that afforded me the label "asshole" ?

Nothing changed. You acted like an asshole and got the boot;
a Size #13 EE crosswise. And you're still "sore"...heh heh heh

>Regardless, I couldn't care less if you legitimately "let" me back on
>FIDO or not.

I wouldn't illegitimately let you back in, DuffPuff.

> I'm still there on occasion just to watch you make a fool
> of yourself and have been since I was expelled under my real name !

You'll need to use an assumed name, and you'll wind up getting your
SysOp booted if you're not careful.

>As a matter of fact ever since David Stark had to relieve himslef as the
>Moderator...and you conveniently took over

David Stark was long gone before I took over. Ken Storm appointed me,
nice and legitimate like. Don't resort to obfuscation, HewbieBaby.

> (did somebody say CONFLICT OF INTEREST ?),

YOU did. But there is no conflict of interest. You just don't
understand anything but anarchy, Huber.

>BC> You can do whatever you please....EXCEPT come back to the SCANRADIO
>BC> forum. That, my fine liver-lipped friend, you may not do.

>I'm heartbroken :(

You should be. You lost out, pal. And got yourself a sore patooty
for your time and trouble.

>Oh well...Let the anarchy begin !
>Since the FIDO Scanradio echo is saturated hence you feel the need to
>poison this domain then its Put up or Shut up !

You started it anew, Duffster. I sure didn't come on here looking for
you and your goodbuddy..........

> This newsgroup is NEVER in a state of Anarchy until YOU show up.
> Why is that ?

Easy. You won't give it a rest. I posted a FAQ. You just had to
show your butt. You could have kept your peace.....but you didn't.
All because you have a sore patooty..... <poor Hubey>

>"Damn I'm good"...Yet more arrogancy...does it ever end Bill ?
>How does your head fit thru doorways ?

The more appropriate question is how does my foot get removed from
your duff, Duff?

Obviously, it's STILL sticking there after all these months.

heh heh heh heh.......

>WRONG !

Indeed, you are wrong.

>One of the scanners was obtained in that state and I could not confirm
>the reason for the faulty CPU...

Bad solder joint, not a bad CPU.

> it very well could have been caused by
> someone trying to perform a "Cheek Mod" :)

Which one, fer instance?

> The other CPU problem DID occur in my posession.

Figures.........

> It was in operation 24 hrs a day for a couple of years. This one
> started doing odd things... The scanner used to run hot...

Yes, that is normal. And it stresses weak vias and solder joints.

> I suspect that the heat may have affected
> the CPU and it began to act flakey.

CPUs don't act flaky. but defective solder joints do.

>Buddy with the problem 2004 never gave any info about the history of
>his scanner or admission of previous 'tinkering'.

You didn't ask, either.

>> Chances are, you did nothing more than repair bad solder joints.

> Don't think so Willy...I have the sense to have systematically exhausted
> the obvious before concluding that the CPU was bad.

Defective solder joints are not obvious.

>Reset CPU, re-sweated solder joints

All of them? Hardly. Besides, I have found bad vias that were sweated several times in succession and remained bad. Only repair was to insert a #28-ga wire and solder both sides.

> and checked for via continuity ect.

Somehow, I doubt that.

>When you don't see any activity at the clock

The clock will fail to oscillate at the drop of a hat. Anything can cause that.

>Furthermore, a good quality machined socket was installed on the CPU
>board....the scanner worked with the new CPU and didn't with the old
>one. Go figure !

Ahhhhhhh! So WHY was a machine-pin IC socket installed there? The scanner did'nt come with it !!! Thus, it was made to go bad, or thought to be bad when the original problem was a bad solder joint or a bad via. Obviously, if the CPU has to be pulled, anyone with a bean for a brain won't want to go through that terror again, so in goes the socket to make life easier "next time".

Next, you'll tell me the pin spacing is a standard 0.1".

Ummmmmm, FYI: The PRO-2004 has a very conservatively rated CPU. It is eminently capable of operation under elevated heat.....so long as the clock runs at 7.37 MHz. I repeat again....that CPU was made to go bad or it was misdiagnosed because of a faulty solder joint. No doubt it was fritzed by the time it got pulled out - a job worse than a root canal.

Suit yourself, though.....

How many channels will they be using?

If four or five, then you won't have any problems
once you find out the 800 freq's to listen to or
900's....you'll be able to decipher what is going
on in your area....on this trunked system.

but if your area is putting in 23 plus channels, you
are in for a great surprise....all agencies in the
service area will be on....police, fire, ems, dog
catcher, diving, coroner, dist attrny, swat, sdu
depts., juvenile, homicide, street sweeper, dog
pound, even a hospital .

and to top it off, some agencies invite other agencies
in another city/town to share the chatter and add more
channels to the set-up....the computer don't care how
many up to a certain point...but the computer just finds
empty channels to broadcast on each time the receiver/mic
is clicked...and then it goes for the next available.

what this means is this: if you want to know what is going on
as you do now...forget it. You will have to buy one of their
non-speaking radios and they will program it and they will only
put in normal channels for you to listen to...no swat or dui or
sdu or dist attorny, or captain or lt's or the tac channels
which vice operates on all the time....

You will be heading bits and pieces of many dept's and this
will just drive you crazy....you won't even know which agency
you are listening to until you get used to the dispatchers
for their voices...then you at least can guess the area they
are talkign about or the agency....police includes pd and
sheriff....that can take up 15 channels easy.

our system in the Bay Area has 48 channels and shared by fire for city and county, clemars, police, sheriff, divers, coroner, ems, dist attrny, tac channels for both pd and sheriff, special detail units which are on tac channels for them...street sweepers and street maintenance, juvenile hall, sheriff on two sides of the hill....different call signs....search and rescue....and more

The trunk system is great: for the agencies using it. And if they will not authorize anyone, even the press, for getting radios programmed by their dept., the press is out of luck and has to do the old beat check routine...there is no consistency .... just chaos....this is the cops best friendly radio system.

In time the digital radios are going to be common...then no one listens on any radio system called scanner....then the cops will truly be happy.....the press truly sad.

I am truly sad most of the time. Have a press radio for one and scanners for the other...so be aware that your listening enjoyment is about to take a spill if it's a large agency or allows other city's to come on down and get in on the action

>Just out of curiosity, can anyone think of a reason why the
>French version would have to have the commercial FM band blocked ?

Some countries have higher import duty/tax for consumer electronics or
entertainment electronics. Listening to high fidelity FM stereo
broadcast will be a luxury, and under a luxury type of duty/tax. That
will make the radio much more expensive if the price is already high.
I remember this is the case in Australia in 89 when I visited. I
think some sort of mod can restore it easily though. I am not sure
why then the AM broadcast band 530kHz to 1650kHz is not blocked then
in this case. May be listening to AM is a basic requirement in life,
but FM is a luxury. (sort of like in California, USA, box of crackers
(biskets) without anything has no sales tax, but a cheese cracker
has).

I am sure the French Custom Department would be able to verify this.

>anyone tried this?

I have purchased at local Radio Shack clearouts a few mirror mount "pig-tail" (stacked 5/8 essentially) antennas for very good price. I cut off the TNC connector and put on a crimp type BNC and put in on the BNC socket on my (Radio Shack) Realistic Pro-2006. It works very well and picks up more cell sites than it's telescopic. I am sure of course it'll work for most other nearby frequencies too.

What I want to look for is a way to modify it for my car use since I don't drive a big truck and has no place for mirror mount :). They do share the same antenna structure w/ the mag mount and the trunk-lid mount design. (It is a raised up design, not just antenna, but a supporting plastic rod under).

>the battery compartment?

The good News: YES it is :-)

The bad News: Oh NO is is not! :-(

It depends on what you want to do with it. If it is to get hold of a
fixed level audio, then YES IT IS.

If uoy want ABSOLUTE RAW (straigt from the pin) audio then the problen
is that there are several demodulators (all two of them) , so the
answer is NO it isn't BUT read on macduff....

I have the service manual for the 8000.

There are different demodulators for the different modes.

The nbfm is is out of U1 - TK10485M
the AM/WBFM is out of U3 - TA7792
Sideband osc/buf Q9/Q10

The following description is MY interpretation of the block diagram.
(I do not have time to take a detailed look and analyse the circuit
diagram). The words below are MINE not AOR's Therefore the following
must be seen as NON OFFICIAL. AND at YOUR risk.

The various discriminator/demodulators/detectors have pre processing
(conditioning) before all meeting at the mode selector switch U6.
(Cmos bi-switch 4066)

The raw NBFMsignal gets filtered and goes through a buffer amp Q6
(fixed gain) before hitting the input of mode switch U6.

The raw AM/WBFM does not get conditioned before hitting the input of
the mode switch.

The output from the mode switch goes through amp U5B [uPC358] (as a
buffer? or line amp? - it matters, but be aware that there is a fixed

gain amp here)

The output from this amp splits into two directions. One direction takes the fixed level audio to the normal audio amplifier, via the audio gainpot etc. (Volume control).

The other direction feeds the FCC connector on the back of the radio via C9, a 0.1 mfd blocking capacitor.

I DO NOT recommend any one messing in the back of the radio UNLESS you have experience in micro (size, not processor) electronics and are familiar with Cmos handling techniques - the tracks are tiny and so are the components - they are sensitive to body static electricity - especially on hot dry days when body static cab be as high as 100,000 volts (and the poor old AR8000 takes 5v! - BE CAUTIONED!

(It makes yer eyes water thinking about it!)

I CANNOT BE HELD RESPONSIBLE FOR BLOWN UP RADIOS.
NO MATTER HOW SO CAUSED!!!!

The fixed level audio out of the mode switch BEFORE it get to the blocking 0.1mfd blocking capacitor can be found on pin 3 of connector J2 inside the radio.

The same audio (after the blocking capacitor) is on pin 6 of J3 (The FCC connector on the back of the radio.

(Looking at the back of the radio, pin 6 is is the second one in from the left.)

CAUTION - the radio supply voltage (c5v) and ground are also on this connector so be carefull you don't short them whilst pocking about!
==========
The audio is not available in a similar manner on the 2700.

Hope that gives the answer to the question.....

====== And now, a word from our sponsors!...==========

Commercial plug:-

I do a low cost Interface kit for the AR8000/2700 - complete with the FFC for the back of the radio.

Kit of parts: USD 50.00 delivered by air to USA/Canada
Built & tested USD 75.00 delivered by airmail to USA/Canada

(Personal cheques accept but add 5 dollars (bank charge) and allow bank clearance time before shipping)

UK: Kit UKP 25.00 + 5.00 P&P
UK: Built & tested UKP 40 + 5.00 P&P

(No plastic - sorry)

Email for further details.. d.gray@AutoComm.cityscape.co.uk

NOTE: I shall be on vacation as of Wednesday 24th July to Tuesday 13th August - I will not be able to answer email or process any orders during this period.... Thanks

BTW: Channel Commander V2.0 software soon to be released. Email me if you want to be added to the mail list for info about it when it is available.

Good price.

The attached file should work. There are two models: before and after
May 94 (fully restorable/test_freqs_only respectively). After are
marked with a white tag on the back with 5A4.

The modification is not difficult if you have a little experience with
soldering surface mounts. And there are places that will do it for
around $40.

Scan lots!
--

-=[JimK Davis]=-
jimkd@worldnet.att.net

Product: Realistic PRO-46 by Radio Shack
Purpose: Restoration of full 800 Mhz coverage

The modification of this unit is from the May, 1993 issue of
Monitoring Times, published by Grove Enterprises.

** Disclaimer: All modifications are done at your own risk. This
product uses surface mount components which can be easily damaged.
Do not perform this modification if you are not experienced with
this type of circuitry. This will void the warranty of your scanner.

** Listening to certain portions of the 800 Mhz band is prohibitted
by United States law.

Modification of PRO-46 for full 800 Mhz coverage with 30 Khz stepping
available.

1. Remove the battery pack, battery door and antenna.
2. Remove the four black screws from the back of the radio, then
push upward on the bottom of the rear of the case, carefully
swinging it upward and removing it.
3. Carefully insert a small screwdriver between the two boards
next to the interconnect plug in the lower right corner. Gently

pry the top board up to separate it and set it aside.
4. Unsolder the copper-coated plastic shield from the microprocessor
and set it aside. ** CAUTION!! Too much heat will damage the
shield. **
5. Locate the two chip jumpers imprinted with "0". Carefully unsolder
and remove both.
6. Solder one chip jumper across the two upper most unused solder
pads. (Soldering a jumper across the lower two pads changes the
30-50 Mhz band to 68-88 Mhz.)
7. Reverse steps 1-4. The modification is completed.

>->->--
>->->Rick Lewis
>->->Phoenix, AZ
>->->ricklew@aztec.asu.edu

The weather info is being broadcast on both 162.400 & 162.550 where the 162.400 has more Olympic direct broadcasts for the Atlanta area. There does not appear to be any additional frequncies used for just the Olympic weather from what I can scan.

I'm sorry, but I have advertised things for sale w/o a price, just
because I didn't know the value. I do NOT expect to squeeze anybody,
and all I ask is a fair price, agreed to between two people.

I also answer ALL e-mail. Each of the items I have sold via the I Net
have been as advertised, and the customers are ALL satisfied, or I
will make it right. I have found that generally speaking, the people
out there are honest and good people. No body has rip'd me off, nor
have I done so. I am impressed with the folks out there.

So what's the deal with this CE-232, anyway? It sounds like about six bucks worth of parts soldered together and sold for a couple of hundred. Is the CPU that expensive, Bill? BTW, if you send a copy of the product to just about any magazine, they will revue it. At least if the product is of any worth at all...

Also, your scanner FAQ was little more than blatant advertising. I am not going to promote your business by discussing exactly what parts, either, so don't even ask.

Please take your little flame wars to e-mail, Bill. This is not the place for it.

Principles aren't of much account anyway, except at election time.
After that you hang them up to let them season.

NCIC is a database of Wanted Persons, Vehicles, Plates, Articles etc, plus a database of criminals supported by fingerprint submissions by individual police agencies throughout the country. NCIC maintained by the FBI, but the data is input by individual law enforcement agencies.

The NCIC database is accessed by the NLETS (National Law Enforcement Telecommunication System) whose switcher is located in Arizona. The NLETS system has all law enforcement agencies tied into it, as well as the motor vehicle database of each state and the criminal history files of each state. When a officer in California runs an Oregon reg plate, the message is directed to the state switcher, then to Arizona, then to Oregon. The return message take takes the same route. Law Enforcement had a Web long before the WWW.

Some police agencies, to simplify things, just say negative NCIC, meaning no wants or warrants, even when referring to the local state database as well as the Federal database.

Here in Raleigh, NC - there was one afternoon, just your normal traffic stops....then on the status channel....

(a woman's voice) - Hello? Is there anyone there?
(dispatcher) - last unit, please repeat?
(woman's voice) - hello? Is anyone out there?
(dispatcher) - Last unit, please identify.
(woman's voice) - Hello? Is this thing working?
(dispatcher) - who is this?
(woman's voice)- OH! I'm in a pay phone booth, and this walkie talkie was sitting here....and I did not know whose it was....

Seems as though one of the patrol units had stopped by the pay phone to call in - and left the radio in the phone booth! And the dispatcher did not have the woman wait there, nor did she make the woman take the radio to the store manager of the Kmart (where the pay phone was)... but had the woman LEAVE THE RADIO THERE!

what was she thinking? heh.

Someone may be able to tell me:

Why should the press have a radio programmed to hear only the police (or fire, ems, etc)?

I live in a small community which is planning a 900 Mhz system. Right now, the press knows every little thing that the police do since they listen in on a scanner. Not that I am against scanners, but aren't you NOT to use any information you hear for monetary gain?

Media must argue that their civil rights enable them to get a radio programmed to hear the police, ect. but no one else can. Now I do not think that is right.

What do you think?

3418. Correct Antena Length for RR Frequencies

Newsgroup: rec.radio.scanner
Date: 1996-07-21 00:00:00 UTC
From: mdhudon@intranet.ca
Message-ID: <4ssigj$sul@news.intranet.ca>
Source record: 229337

I was wondering if any one knew what the correct antena length was for
the railroad frequencies from 160.110 to 161.565 megahertz.

Is there a formula to calculate this (I'm sure there is)?

Thanks,
Marc Chouinard

Hi-

There are several scanners on the market that have computer control interfaces built in, including the AOR 8000
and 2700 handhelds, and the 3000 base, as well as the Icom 9000, 7100 and 7000 base units.

You can also add computer control to the Radio Shack 2005 and 2006 by buying an interface from Optoelectronics
called the OS 456, and the Radio Shack 2035 and 2042 (still current models) with the OS 535. This is probably
the cheapest way to go, and gives overall the best results.

You'll also need software to run whatever radio you choose... I like Probe for the optoscan interfaces, and
Scanstar for the others...

The quality is excellent, and the computer can do things that you just can't do with a normal scanner.

Good Luck.

Ken

The CE-232 is a LOT of parts to be soldered together, and yes, the CPU is expensive, but it isn't the majority of the cost involved.
I have the CE-232 and it runs several (3) scanners...one at a time as described in his techical information. The interface is very powerful and agile. It will do many things the OPTO versions won't, just as the OPTO versions do much the CE-232 won't do. It just depends on your wants/needs. I suggest the OPTO for those that have very little hacking experience...the CE-232 for those that like to dive in and get personal with their equipment. (I have a friend that has the OPTO 456, so I am familiar with it.)

As for the arguments on rec.radio.scanner, I agree. Few people enjoy the rocks these people throw at each other.

What newsgroup? This one? ha ha ha ha ha ha. They don't? Really?
You gotta be shitting me? C'mon, pal, you gotta get up a lot earlier
than this to pull an easy one over on me.

But, THANK YOU for quoting my -= entire =- PRESS RELEASE! You are a
gentleman and a scholar of absolutely the highest repute. Anyone who
says bad things about you,just send 'em my way and I'll straighten
their asses out righteously smart-like. Tuit suite, too!

> Why do you feel that you are exluded from this simple
> courtesy and show of respect to the people who participate
> in this forum?

Oops. I take back the good I thought about you.

First of all, my fine feathered, carrot-nosed busybody scatologist,
others DO post various and sundry ads here. You type with forked
fingers, lad! Do you eat with those fingers, too? Gawd..... :-(

Secondly, it was an informational press release with less than a 0.1%
focus on advertising. Most of it was technical and directed to the
sorts of questions that are often asked about the CE-232 Scanner/
Computer Interface.

Thirdly, someone ASKED about computer interfaces and no one else
mentioned the CE-232. So I did. You don't mind, do you? <grin>

Soooooo, are YOU the Head Cheese around here to whom all respect and
courtesy must be first paid before entering the sacred chamber?

Are YOU the HMFIC who gives and denies permission to fart and breathe?

Are you a "wheel"?

(Psssst, you know what little dogs do to wheels, don't you?)

I'm sure there is a grave misunderstanding on my part about WHO the
hell you think you are versus WHAT I think you are, so let me defer to
your forthcoming dissertation on Your Excellency's position in the
great scheme of things around here.

In closing, I really SHOULD more respectful and gracious of your
magnificent personage. I should be thankful that you saw fit to QUOTE
my ENTIRE PRESS RELEASE, thereby giving it even greater exposure and
underscoring your failure to practice what you preach.

Maybe you're not so bad after all.

-= Your humble servant =-

It's a proposition, all right. Governments took over the spectrum about the time it was discovered, and there's been no letting go ever since.

The same thing will be happening to the Internet and the newsgroups before too long. Governments don't dare REALLY let people have freedom of speech. At least, none to date.

You ought to come back and check it out now. I got rid of all the lids, twits, nitwits, nincompoops, and sickos. SCANRADIO has become a free forum where everyone is free to talk scanners and scanning. Not a bad place anymore.

> but way too much shit along the way...

Well, yeah, but that was due to the likes of ol' Hewbie Duffster and cronies who had the idea of sinking the whole forum. Once they got the boot, things settled down and the forum has become civil and friendly, not to mention educational and informational.

Just remember one thing..... "shit happens", but it is always dropped by someone FIRST. Hugh Duff dropped it FIRST here about a week ago. Just check the threads and the date/time headers if you don't believe. He started his share of it on the SCANRADIO forum, too. And got sent packing for his time and trouble.

>-Still down? NOW think about CPU

That would be the classroom, textbook lesson in troubleshooting microprocessors. Can't argue that one. The PRO-2004 is a special case, however, because a wave soldering machine at the factory went bad by degrees. Thousands of PRO-2004's were shipped to market before the fault was discovered.

Many PRO-2004's failed almost immediately and were repaired under warranty. But many more were good enough to survive the warranty period before normal environmental factors weakened the already weak solder joints, whereupon even more failed. I began repairing them in that second wave.....and have experienced succeeding waves of failure ever since, about two years apart, give or take.

Matter of fact, another wave of 2004 failures is cresting right now.

Nothing wrong with cursory checks of the power supplies and system clock, since that takes almost no time, but the problem will almost always be found to be a defective solder joint or via (plated-thru hole).

Of course, knowing a little history of the unit and the operator helps, too. All bets are off, if a problem occurred while the dude was modifying something. THAT is different.

However, when a PRO-2004 just quits for no good reason, it's a bad solder joint that expanded and contracted one too many times and finally broke its bond. The 2004 does run a little on the warm side when operated from its internal power supply. When it's turned off, it cools down. This heating/cooling cycle is what works on those potentially defective or weak solder joints until something finally gives. Oftentimes, it becomes an intermittent problem at that point.

A helpful thing to know is the history of related equipment. For instance, you NEVER hear about sudden, no-good-reason failures of the PRO-2005 and PRO-2006. When someone complains of a problem in one of those two, it won't be a defective solder joint. But then complaints are RARE for the PRO-2005/6. Would be rare for the PRO-2004, too, if it weren't for the bad solder joints.

Actually, bad solder joints weren't the only "factory bug" with the PRO-2004. A component stuffing machine went on the fritz, too. I've seen a lot of PRO-2004's with long-legged components that weren't fully stuffed onto the board before soldering. Sometimes, these can work loose from the joints, but that problem is more often on the Main Receiver Board and not on the Logic/CPU board.

Rgds,

>Is it the unlabelled 1st entry in your disc. list?

No, that one is just an NFM chip used in various scanners for which I either don't remember what or never knew.

>I've seen this question asked many times on this forum, but
>have never seen a clear answer.

Well, AOR is utterly terrible when it comes to technical documentation, and I haven't seen a schematic on the AR-8000 to be able to tell for sure. I'm not sure one even exists. I've asked a number of people for a copy, but no one knows if and where a Service Manual is available. That's what I'd need.

If you have a service manual on the AR-8000, I'd be glad to copy it and return the original. And then I could tell a helluva lot more.

Rgds,

Bill

On Saturday I received a TV station on channel 3 identifying itself only as Smoky Hills Public Television. I believe that it originated somewhere in Texas, Oklahoma, Kansas or New Mexico. Does anyone know the location and/or callsign of this station?

Are there any good online sources of information on U.S./Canadian/Mexican TV stations?

Thanks.

>
BC> Geezus.....your analog background shows. Analog and digital are two
BC> different worlds, Ignats.

HD> >I've seen my share of 'flakey' I.C.s that I've had to replace
HD> >in my previous years of Aerospace/Avionic repair...CPU's,
HD> >or discrete logic/analog. And that Billy-Bob is in the world of
HD> >Military rated electronics.

BC> Now you're acting stupid. Or is that not an act? So tell me how in
BC> your world 1's and 0's act flaky? Tell me how gates work some of the
BC> time and some of the time not. This "flakiness" to which you refer is
BC> from an old age relative to ancient components. It is a rare
BC> exception now. A gate is either bad or it is good.

Huh ? Either someone has been feeding you bad information or you
are just way out in left field. What in the hell did they teach you
in Military school ???
A transistor is a transistor is a transistor !
Silicon is silicon is silicon !
What do you think a digital flip-flop (ie.. register
ie..microcontroller) is made up of Bill ? Its made up of transistors
Bill...the same kind that make up an analog op-amp Bill. They're just
connected differently Bill. There really isn't a difference between
an analog transistor and a digital transistor Bill.
Digital ICs can act up or just crap out just like analog ones can
Bill.

>
HD> > Can you just imagine the failure rate
HD> >of I.C.s in consumer electronics !?
>
BC> Extremely reliable. Virtually 100% reliable until they're messed
BC> with, and even then, modern digital electronics is very forgiving of
BC> human error.
>

Hahaha ! Maybe in your days of CB repair you got to see a little
too much work from the screwdriver technicians and have concluded that
nothing in the world of consumer electronics ever goes bad without
having been tampered with.
Do yourself a favour and call up the service department of any or all
of the major electronic manufacturers of consumer electronics and ask
them how often a VCR or TV or piece of stereo equipment gets brought
in for repair...and ask them how many of them were 'tampered' with.

HD> >I think we all know this Willy. Like I said, the obvious and notorious
HD> >were well checked before I made my conclusion.
HD> >Put a hold on the DICTATORSHIP style of telling ME what I really saw.
HD> >I'M TELLING YOU...THE CPU WAS BAD ! I WAS THERE...in living colour.

BC> Like I said.....it was MADE to go bad, or else it was a defective
BC> solder joint that you inadvertently repaired when you went to the
BC> trouble of replacing the CPU.

BEEEEEP, WRONG !
I really hate to break it to you but electronic components DO fail
on their own.
Go take an electronics course William.
You're really hanging yourself here. Quit while you still have
some dignity (Hmmm???) and scurry off back to FIDO with your tail
between your 'cheeks'.

> >BTW...there is no "terror" in removing IC's of this nature. Shame a
> >fellow like yourself who claims to be the almighty Scanner Whiz
> >"Engineer" has a phobia with this.
>
> Then you didn't remove the CPU yourself. That one in the PRO-2004 is

> to remove such that the chip just pops out. Obviously, you didn't do
> the job yourself.......probably hired a chop shop to do it for you.
>

Done it a plenty times Willy ! (Not just on the scanner).
Removing the IC is a breeze when you're experienced. I don't claim that
a novice or fingerpokin-hobbiest wouldn't find it difficult....
someone like yourself perhaps !

> >BC> Ummmmmm, FYI: The PRO-2004 has a very conservatively rated CPU. It

HD> >Oh ya, I forgot...you were part of the engineering team who did the
HD> >die-fab design on the GRE-0327 weren't you ! :)

BC> Are you stupid or what? Do you think that GRE-0327 is a GRE chip? Ha
BC> ha ha ha ha ha ha ha ha...........whooooooey! <Giggle> <Snicker> No
BC> shit, you think THAT? Ha ha ha ha ha ha ha ha!
BC> Psssssssssst! Hey, Ignats, it only has a GRE number on it. The chip
BC> is a very standard Mitsubishi MPU..... very, very standard. <giggle>

Hahahaha !
Not only a masquerade of an electronics technician (oh ya..."Engineer")
but your reading skills are in trouble. Are you dyslexic ?

Where did I say that the GRE-0327 was made by GRE ?
No kidding about the Mitsubishi part...they're a dime a dozen in
consumer electronics.
Read the above quote again and it will all be very clear Billy !

HD> >I wish all electronic components were as reliable as you claim them to be.

BC> They are.

Sorry to burst your bubble.

HD> >CMOS parts are notorious for showing signs of malfunction due to
HD> >mishandling from improper repect for their fragile static sensitivity
HD> >even years after installation and perfectly normal operation.

BC> Hogwash. Read the specs on CMOS chips nowadays. Do you know what
BC> "diode protected" means? It works, too.

Unfortuately diode protection does not render a CMOS part resilient
to static...they are still to be treated with precaution. Go into
a REAL electronic repair shop ie...one that does Military electronic
repair and have a look on the service benches...betcha a fin they STILL
have antistatic mats, wriststraps and other forms of precautionary
measures in place. They're not there from before the days of the
'input protection diodes'....they are in place because CMOS parts STILL
require careful handeling.

HD> >Problems often tend not to show up for some years later.
>
BC> Yeah, ancient analog components, sure.

Ahem...I won't go over the analog/digital thing again :)

I think your lack electronics knowlege is shining thru at this point
Willy. A person like you might think about clamming up before
totally disclosing his lack of knowledge on a subject that he claims
to be an expert at.

Like I said, The CPU was bad....End of discussion !

> Tom Montgomery

Hi Tom,

I too own and use the Pro 2022 as a base unit. But I have imaging
problems with it in the 856.0000 frequency range. This range is my
city's fire department. I pick-up cellular images, I think!!

I also have a Uniden bc200xlt, which iI truely love, except that it
doesn"t get the military band.

Keep in touch on the Newsgroup.

be hearing from you,

I frankly don't have a side on this issue of Bill Cheek, et al, other than to wish that it would die and stay dead. However, that was pretty funny. Please clarify one point for me though. Were all the misspellings, misused words, and poor grammar part of the joke? Please tell me that they weren't, that would make it hilarious.

Glenn Reed, KF5XB

P.S. - I am curious about that name "Proscan782". Does that mean that 781 people thought of it before you or would 7/82 be a birth date. Let's see, given the quality of junior high instruction these days and the 'hit or miss' composition displayed in the original message, 14 sounds about right. TTFN.

Here's what I have, hope it helps.

Glenn Reed, KF5XB
CAP - OKWG/DCA

==========

Subject: Pro46.Mod

Disclaimer: This file is for information purposes only. The author cannot be held responsible for it's use or misuse. Proceed at your own risk. It is illegal to monitor cellular phone calls.

You will be able to tune continuously from 80?whatever to 95?whatever and this will include the appx 870 - 890 cellular band with the proper 30 MHz steps for the cellular frequencies.

I haven't tried this modification to the PRO-46 so you will be on your own.
(note: The forwarder of the mod hasn't tried it, but I have and it works)

- -

1.Remove battery pack, battery door and antenna.

2.Remove the 4 black screws on the back of the radio: push upward on bottom at rear case and cantilever (swing) case half up from bottom to separate and remove, its not necessary to remove belt clip.
(note: This sounds much easier than it is. Be prepared to "prop and lever" around 3 catches in the battery case, along with one on each side around 1/4 of the way down the case)

3.Carefully separate RF board from processor board by inserting eyeglass screwdriver between board by plug-in connector.

4.Unsolder copper-coated plastic Rf shield from microprocessor and set aside.
(note: If memory serves me correctly, this SHOULD be the side where the pushpad is. In order to follow the rest of the instructions, place the scanner face down on a piece of cloth or in a clamp with the antenna facing AWAY from you).

5.Locate two resistors marked "0" (zero) on right side of board.
(note: On mine they were labeled "000", not "0")

6.Carefully unsolder and remove BOTH of the resistors.

7.Reinstall ONE of the removed resistors (or jumper) on the UPPERMOST set of EMPTY solder pads.
(note: These are located just to the left of where you just removed the two resistors.)

8.That's it, reassemble the radio.

PS-Reinstall one of the removed zero marked resistors into top set of empty solder pads. DO NOT install anything into LOWER SET of empty pads (cancels 30-50 mhz and adds 68-88 mhz.

> Thanks,
> Kdb

I use the JPS NIR 12. I've found that the NIR 12 likes a carefully
controlled, constant input level. So if you listen to one signal, say, a
noisy NOAA weather broadcast, it'll help. In usual scanning however, the
volume from the scanner changes with the signal. Therefore you have to
keep adjusting the level of the radio feeding the NIR 12. Also, the
thing's effectiveness varies with different types of interference. It is
definitely oriented to the SWL or amateur. It is a well-made device, good
documentation, no birdies, does what it claims to.
Costs about $350. Depending what you listen to it could be a great help.

>Anything else stinks of a coverup.

Another conspiracy! The fact that there is no evidence of a conspiracy indicates what a clever conspiracy it is!!!

Seriously, what are the users of a trunked system going to cover up? The recordings of radio traffic are available in court proceedings, so what cop is going to get on the radio and say, "Hey...let's break into that TV shop and steal some VCRs!" knowing that it could end up in a court record somehwere. Also, if a cop DID say that, he would have to hope that ALL the other cops in his fleet will go along with him and not tell on him. That would include the dispatchers. It would have to be a department wide conspiracy...with every individual in the department willing to go along with the criminal act mentioned on the trunked system. Call me crazy, but I just don't think that would happen.

Last, trunked systems just make it difficult to listen, not impossible.

I have a question that you might be able to answer. Do you know where the Simi Valley PD channel 1 repeater is located? I can pick them up with my hand held scanner all the way to Laguna Beach (90 miles away).

Also, what are the freqs for that trunked system in LA? I don't think I have any LA trunked systems in my database yet.

Thanks!

Well, I was trying to make a point about how obnoxious the whole thing really was... I guess that did not come across as I intended. My apologies.

I don't disagree that there is a place for "reasonable" advertising. Optoelectronics, Computer-Aided technologies and other reputable firms sometimes post short messages announcing new products, updates and so forth. They'll usually include a web page or e-mail address for people who want additional information. That COMMTronics ad was plainly a "shove it in your face and go to hell if you don't like it" kind of thing. Naturally, I resented it and said as much.

I was monitoring a code-5 in my neighborhood (They were watching a known tagger waiting for him to strike that night). He went to a party and they sat there waiting for him to leave. They watched a guy that they picked up a couple nights ago with controlled substance on him and noticed that he was refusing to smoke. They were joking about how they might have set him straight when one of the police officers said "Maybe he's just too stoned to smoke anymore" .. just then the officer observing him said "Yup, that's it .. he's down on his knees now and purging himself in a planter" :)

That same night they took a picture of one of the kids smoking a joint with a sign in the background that read "Watch for children". I doubt the picture came out since it was dark outside.

I've owned both as well. I sold the AOR8000 about four months ago (and I regret it now). I just bought a UBC3000XLT and I really like it, especially the 300 cps Turbo search. Also, I don't find a significance difference in performance between the two in the bands that I listen to.

Overall, however, the AOR8000 is a better all around scanner. The key difference between the two, at least for me, was computer control and the ability to auto program the AOR8000. That, along with the ability to type in labels for each channel, is a significant benefit. Obviously, that requires the added expense of an interface and software, which really makes owning the AOR8000 a luxury. "You get what you pay for," is particularly true in this case.

I've been hearing a lot of about Cheek's handling of the FidoNet forum and mainly from people that he's kicked off for one reason or the other. What these messages have in common is that when someone says something that Cheek doesn't like, he kicks them off.What better way to keep people from poking holes into Cheek's view of the world than to stifle disent? In another post someone suggested that PjB was a Nazi propagandist. If that's the case, Cheek is the old goose stepper himself (and just as delusional, meglomanical and wacked out too).

JW,

Just found out it DOES output (on the RS-232 port) all data packets
needed in order to follow a talkgroup. The data is 2400 baud async
ASCII. Now, somone with knowledge of the LTR format should be able to
write a program using the data packets to follow a talkgroup.

From: Joseph.Cardani@mail.tju.edu
Message-ID: <4t0epn$srf@mail.TJU.EDU>
Source record: 229161

Which Orange County/Orlando City agencies are presently using the new trunked public service system. Is Fire/EMS also on the trunk? How about the Medical Helicopter? Any other interesting listening on the system?

I believe the system is a Motorola Smartnet Type II system. How many concurrent systems are in use, ie, how many control channels are used at the same time. Also, and do the control channel(s) change frequency or a daily basis or so?

Also, if anyone has a "talkgroup assignment listing" that would be VERY HELPFUL.

I will be heading to Disneyworld this Fall and would like to listen to the Orange Co Sheriff/Fire/EMS etc.

Thanks,

Joe

It's very difficult question about freedom and other things in US and
Russia. In Russia you can put any technical information in the article
or on the WEB. If you found some security codes, cellular codes, e/t/c
- you can put them anywere. And nobody will claim you.

In northern Georgia, NOAA operates on 162.55 for the metro Atlanta area and on 162.40 for the Rome/Dalton (north Ga.) area, both originating out of the Peachtree City office. Both are including reports for each venue along with the normal broadcasts for their areas. There does not appear to be any additional station for the Olympics, although NOAA is running a special operation with short-range, localised info for the venue management and media.

10-codes vary from dept to dept. Some Radio Shack stores have free handouts of local freqs and codes. If that doesn't work for you go to one of the major bookstore chain and get/order a copy of a book titled "Latest Intelligence" from TAB Books. It lists the 10-codes in all variations covering 24 pages (there several variations for each code).

This book does NOT list them by dept, though but if you keep the list next your scanner you'll be able to determine the codes your dept uses by comparing the context in which they are used with the list.

I've been following this stuff for a while, too. If you don't like it, the solution is simple. Don't read it. When you have such an open forum, you are bound to have a lot of wasted bandwidth. Perhaps it's time for rec.radio.scanner.moderated? I personally see no need for it, as I don't sit and read each article. I look for interesting threads, and when they turn this direction, I ignore them.....

>scanner, tell us what you think about it.

I just received one this afternoon, and am quite enamored with it.

It is TERMINALLY cute, very odd and arcane to program, and has superb RF performance. The only REAL downside I see is that it does not associate frequency step sizes with search ranges. So you must reset the step manually before every limit search, because the "auto" function almost always chooses the wrong one in the US.

Coming from someone who as owned an ICOM R-1 and an Alinco DJ-X1 (briefly) this one is a MUCH better radio.

3498. Re: Airline scanner policy

Newsgroup: rec.radio.scanner
Date: 1996-07-22 00:00:00 UTC
From: James Robinton <robinton>
Message-ID: <4t0dap$7g7@news.sanders.lockheed.com>
Source record: 229175

I think the one and only point is SAFETY. Electronic devices emit
radio frequency waves even if they are only intended as (music CD's,
Scanners, Laptops). Many of these have pretty high clock rates. The
aircrafts antenna's are mounted all over the surface..tail, wings, underside
etc. Given that you are in such close proximity even unintended emitions
may swamp (with noise) the real signals coming from the ground. During
takeoff and landing phases when you are closest to the ground or trying to
follow a radio path that will lead you to a safe landing is when this is
most important. In some systems, even 1 degree of error can place the
aircraft hundreds of feet from where it should be. At least during cruise
the pilot might have a chance to cross check and discover a navigation
error.

Equipment installed in the aircraft has been tested and flight qualified
thus insuring that it does not interfere with other on-board receivers.

Every time this topic comes up, someone "suggests" that they get or
have gotten away with it. I can't see the justification. Even if you
have pulled the trigger 5 times without being shot, it's still Russian
Roulette,
only not everyone onboard has the benefit of knowing they are in the game.

(No Flames) Respectfully submitted with only safety in mind.

Message-ID: <22JUL96.17013651@shrsys.hslc.org>
Source record: 229176

After not checking in on this group for almost a week I figured I would see posts from some NY area listeners detailing what they heard regarding the crash. What with the Coast Guard, FBI, NTSB, U.S. Navy, National Guard, regular marine traffic etc. involved, you would think there has to be lots of activity, and someone would be reporting on what was heard.
But...all I see is that this B. Cheek crap has started up again with dozens of inane posts. How disappointing.
BTW, I live in northeast NJ and did hear a little CG air traffic and some misc. marine transmissions, but live too far away to be hearing very much from the actual site. What's going on out there?

Source record: 229177

excuse long quote,this reader's limited.

YES, YES.
OPTO merely re-sells the filter made by MINI-CIRCUITS.
It is about $5 cheaper through mini-circiuts, AND they'll
send you a 2inch catalog if you ask with nothing but
such things! You can specify excatly what band pass or
notch you want, AND get the exact connectors on it without
having to use adaptors,,etc.

BHP400 will let you hear anything over 400mhz, so will
knock out those odd-ball TV & a good portion of paging,etc.
(opto's BP400).

BHP800 is great for over 800mhz pickup.

These are about as long as your optional scout stubby antenna.
GREAT for the R10, Scout, or Explorer units to get out the
trash!

Newsgroups: rec.radio.scanner
Subject: Filter for OptoScout
Date: 19 Jul 1996 19:31:54 GMT
Organization: University of Pittsburgh
Message-ID: <4sonra$jjl@usenet.srv.cis.pitt.edu>

I purchased a scout not too long ago. I'm pretty happy with its performance
overall. The only problem I have is that I get *alot* of hits on the
freq's for channels 7-13 and also radio stations as well. This only happens
whenever I'm close to a tower, but I happen to live on the other side of
valley from a TV transmitter.

Do they make a small filter to attach between the antenna and the scout that
can block the scouts reception of these freqs? I need a manufacturer name
and model number, and approximate cost...

Thanks.
Keith

The currents are spreading the debris. Today the search area measures
45 by 65 miles and it's further out to sea so I suspect this may bring
about an increase in HF traffic from the scene.

My favorite is the GRE all-band, sold by GRE America, colorblind CRB
Research ("red top" antenna ... it's ORANGE), and Radio Shaft parts as the
replacement for the PRO-34 (THIRTY FOUR) scanner.

It's no superstar on any one band, but it doesn't rot on any one band either,
and with today's sensitive wideband scanners that's more than adequate.

If you're into huge ... look at the Austin Condor, especially for VHF-lo.

Hey Bill, why did you decide to write to me now??? When you sent all those
lies & BS to my sysop you would not write to me then????? You wouldn't even
to my queries. I guess that shows how little of a man you are.

Since you are SO curious - I DO NOT HAVE an internet e-mail address to
receive mail at. (except for my fidonet address) I suppose you'll
go whine to my sysop about it on fidonet which would really by a
poor thing for you to do since I am not using my fidonet system
to gain access here & it has nothing to do with him or fido. But
I suppose being the little pathetic whimp you are that whinning to him
is all you could do. It's to bad he is to nice of a guy to tell you
to go pound sand. If you REALLY want to write personal e-mail to
me you can send it to my fido address, but I would prefer you not
write to me as you are simply to pathetic & hopeless.

You don't know what you are talking about.

First of all, I had NEVER been on this newsgroup untill 2 days ago.

Second, YOu have obviously not dealth with Bill Cheeks very much.

Third, I have a couple different FCC licenses & a Master's in Communications
so don't try to tell me I don't know anything. What are your
credentials?

Anyone know what type of radios they use now?
I never hear squat except "johnson to miami", etc
with very little but administrative junk.
Do they just use Motorola's with one of the privacy
modes i.e. Motorola 2000 programmable.??

In the 70's, Santa Rosa had just one police frequency, and I had a radio that would hear it. One night I was working late, and heard dispatch call an officer:
"XXX, are you free?"
"No, but I'm reasonable."

Here in the Phoenix area, the Peoria police have a radio discipline that could be described as relaxed. Jokes go back and forth all the time. On Christmas Eve, the radio frequently breaks out with a capella renditions of various Holiday songs.

Boy the 'fighting' that goes on in here is child like!
Bill Cheek..and the others write in here "FLAMING" eachother!

Bill says " They started it in open fourm " Your right Bill ! they did!

My expereince has been this with people, Dont flame them in public
THATS WHAT THEY WANT.. A reaction Bill !!

Like an obsecne phone caller... he/she wants an audience.Dont be that
audience.

If I get flamed..so be it...! big deal..my life does NOT revolve around
a news groups "Ideas".

I am NOT flaming anyone!! Just act like adults!

I am not a Bill fan or anyones fan for that matter,it just makes common
sense not to respond to such arguements in public. (only my opinion)

As for the Police dispatcher who has NEVER in 14 yrs has a scanner
user helpout..Hummm find that one a little hard to beleive!!

The superintendant of the ILL state troopers said " Without those extra
set of eyes,we would not have half the convictions we do".
He goes on to say " We would also not entertian the idea of DVP".

Now having been raised in a Police family , I can say I do agree with
that dispatchers comments on this:

Sometimes some comms are just too case sensitive to relay over the
air..a sexual assault case or rape etc...Drug busts etc... this is when
the need for DVP or radio silence is called for. Not for cloaking the
call to check on that barking dog!

I have helped many times by litening to my handheld ham HT,tuned
into the Police!

to end this if you dont like what Cheek has to say...SKIP THE MESSAGE!!
or anyother author for that matter.

I am not flaming you Bill,your just an example I am using .

I think the 'fighting' parties should call a truce tho this child like
use of communications...man it sounds like my local CB channel!

Get along...go to pvt email or shut up! Lets get to scanning like the
news group says REC.RADIO.SCANNER

Happy Scanning !

VE3 ECB

I picked up a police agency doing serveilece on someone and they noticed
that a person in the house was using a cordless phone. They sent
someone back to the station to pick up a scanner to monitor the
conversation. Now I would call that illegal! I seriously doubt they
had a court order to do this since it was spur of the moment.
I guess same thing applys to the government. It's legal as long as you
don't get caught.

Howdy Folks...

I'm in the processing of purchasing my FIRST scanner..I have looked at a few, and have decided that I might go with the Uniden 9000XLT...it's in my price range (~AU$600 which is approx. US$450)...

What i wish to know is if anyone has purchased this scanner, do they recommend it as a 'first buy' or a 'buy' at all??

Thanks in advance,

AndrewZ...

>got the wrong end of the jolt. The other 2004 with the problem CPU
>one was indeed one of self destruction...believe it or not.

Tampering is one thing. Failure for the hell of it is another thing,
Ignats. It doesn't happen in scanners. And it doesn't happen in
computers either, for that matter.

>HD> > it very well could have been caused by
>HD> > someone trying to perform a "Cheek Mod" :)

>BC> Which one ?

>Hahahah !

Which one, Ignats?

>HD> > I suspect that the heat may have affected
>HD> > the CPU and it began to act flakey.

>BC> CPUs don't act flaky. but defective solder joints do.

>What ? Have you been working around Radio Shack scanners only
>for too long? You are obviously lacking in electronic repair
>experience. But then again, you were always an "Engineer", weren't
>you !

Geezus.....your analog background shows. Analog and digital are two
different worlds, Ignats.

>I've seen my share of 'flakey' I.C.s that I've had to replace
>in my previous years of Aerospace/Avionic repair...CPU's,
>or discrete logic/analog. And that Billy-Bob is in the world of
>Military rated electronics.

Now you're acting stupid. Or is that not an act? So tell me how in
your world 1's and 0's act flaky? Tell me how gates work some of the
time and some of the time not. This "flakiness" to which you refer is
from an old age relative to ancient components. It is a rare
exception now. A gate is either bad or it is good.

> Can you just imagine the failure rate
>of I.C.s in consumer electronics !?

Extremely reliable. Virtually 100% reliable until they're messed
with, and even then, modern digital electronics is very forgiving of
human error.

>Get your head out of that PRO-2004 and come up for air !
>You are proving to be not so knowlegeable in electronic
>troubleshooting/repair. I'd quit as damage control before book sales
>drop off to nill !

Don't you worry about my book sales. But if I were you, I would worry
about your cranial function and take something for it. Quick.

>BC> >> Chances are, you did nothing more than repair bad solder joints.

>HD> > Don't think so Willy...I have the sense to have systematically exhausted
>HD> > the obvious before concluding that the CPU was bad.

If your "sense" were dynamite, you wouldn't have enough to blow the
pubic hairs off a pissant.

>BC> Defective solder joints are not obvious.

>I think we all know this Willy. Like I said, the obvious and notorious
>were well checked before I made my conclusion.
>Put a hold on the DICTATORSHIP style of telling ME what I really saw.
>I'M TELLING YOU...THE CPU WAS BAD ! I WAS THERE...in living colour.

Like I said.....it was MADE to go bad, or else it was a defective
solder joint that you inadvertently repaired when you went to the
trouble of replacing the CPU.

>BTW...there is no "terror" in removing IC's of this nature. Shame a
>fellow like yourself who claims to be the almighty Scanner Whiz
>"Engineer" has a phobia with this.

Then you didn't remove the CPU yourself. That one in the PRO-2004 is
never a fun job, especially to remove it non-destructively. A number
of those 64-pins go into vias from which the solder is very difficult
to remove such that the chip just pops out. Obviously, you didn't do
the job yourself.......probably hired a chop shop to do it for you.

>BC> Ummmmmm, FYI: The PRO-2004 has a very conservatively rated CPU. It

>Oh ya, I forgot...you were part of the engineering team who did the
>die-fab design on the GRE-0327 weren't you ! :)

Are you stupid or what? Do you think that GRE-0327 is a GRE chip? Ha
ha ha ha ha ha ha ha ha.....whooooooey! <Giggle> <Snicker> No
shit, you think THAT? Ha ha ha ha ha ha ha ha!

Psssssssssst! Hey, Ignats, it only has a GRE number on it. The chip
is a very standard Mitsubishi MPU..... very, very standard. <giggle>

>I wish all electronic components were as reliable as you claim them to be.

They are.

>CMOS parts are notorious for showing signs of malfunction due to
>mishandling from improper repect for their fragile static sensitivity
>even years after installation and perfectly normal operation.

Hogwash. Read the specs on CMOS chips nowadays. Do you know what
"diode protected" means? It works, too.

>Problems often tend not to show up for some years later.

Yeah, ancient analog components, sure.

>Yer' corner PC computer shop is a prime source for such mishandling
>as they unknowingly toss boards and RAM around like they are no more
>fragile than the metal case they get fitted into.

You know WHY they do that? Because the stuff can take it. That's
why. Clearly, you operate out of a 30-yr old text book.

>I care not to argue with you over this any further.

So don't. Go ahead and pop the CPU out of every scanner that has a
problem. Watch me laugh my ass off at you. I do anyway, so what the
hell. You're funny, Ignats. You and your cousins down at the zoo.
Oh, and your gooooooooooood-buddy, Johnnie-Mackie....lest we forget
about him. He's been sucking up to you. Better live it up, pal. He
admires you and thinks your doo-doo don't stink.

<giggle>

Guess I better post it again so you can tell me exactly WHAT is wrong
with it. You keep sniveling and whining, but you don't deal with
WHAT. Of course, you're on a "mission", huh? Why don't you cut to
the chase and spell it all out?

>BC> <Yawn> Your duff, Duff, still smarts from that Size #13EE that I
>BC> placed on it, crosswise..... You just can't stand it. <giggle>

Yes, and that just gnaws on you to where you can't stand it.

>BC> That's going to stick in your craw until the cows come home, ain't it?
>BC> <snicker> <cackle> <horselaugh>

>Yup...you always have and always will be a looser.

Looser? English problems again? You mean, "loser"? Ummmmm, ok, tell
me what I have lost? Your "good will"? ha ha ha ha ha ha.....

> When are you going to grow up ?

In what fashion? You mean just sit around and take your guff, Duff?
Get real, Duff. You're the one on a mission. You came to me. This
time. Last time. And the time before. You ALWAYS come to me. I
don't go to YOU........another thing that just sticks in your craw.

Stop coming to me. Ignore me. Leave well enough alone. Attend to
your own growth needs. Surf your own wave. Ride your own star.
Write your own books. Do your own thing. Don't worry about me. You
DO that, and I'll "grow" up.

Howzzat?

>what to whom, I just want to read about scanners, radios and frequencies.

You need to care about HOW things get started, if not by whom.
Mainly, if something doesn't get started, then it doesn't exist.
Things like this are like fires. They'll burn themselves out after a
while, once the fuel is gone. But more often than not, it's better to
respond and put out the fire.

I wonder how long you'd sit for it, if a troupe of snotballs waltzed
in on you. It's pretty easy to render all kinds of judgments sitting
out in the bleachers.

Pretty much right up front and on the table, though, is the BIG
question of WHY there aren't more authors, engineers, technicians,
publishers, and business people participating in these forums? Ever
wonder about that?

The answer is universal. I've seen it happen in many places with many
different prominent people......they come into a public forum, and a
troupe of sickos jumps all over them. It doesn't take long before the
good guys are gone......leaving the mess to the snotballs.

I'm a little different. I was born in the kitchen and can stand the
heat as well as serve some up. But the brass tacks facts are simple.
Hugh Duff, John Mackey, Michael Alexander, and Peter J. Boe started
this round and won't give it a rest. It's real simple. They want me
gone. I threaten their security, I guess.

It ain't a matter of ignoring them. They won't stop.

Before you wrap it all up into a shut and closed case from up there in
the bleachers, step out onto the playing field and get a different
perspective. Analyze the facts. There are several very important
ones. Duff and Mackey got booted from a moderated forum and have an
axe to grind. But do they have anything to contribute? Never.

Boe is a schizo-freakazoid-weenie who jumped on the wrong side from
the git-go. Alexander ain't much better, but he has his own irons in
the fire that he may feel I threaten. Check the threads and see for
yourself......though its mostly Duff and Mackey who are fanning the

flames for this go-around. Boe seems to have stuffed a sock in it, and Alexander may be thinking things over after failing to practice his preachments. But Duff and Mackey.....now those two popinjays are on a mission. Duff even admitted it.

So now what? Should I let them run me off? At least step out onto the playing field before deciding.

To Those Concerned About Trunking and Life Made Miserable For Those Who Attempt to Listen

You have to be in the news gathering business (still or video) to understand the "chaos" this system creates for "getting to the nitty-gritty" about what is going on NEWS WISE.

it used to be that each dept. in a police agency had their own group of freq's....such as: 155.13, 155.895, 153.895....narc's these freq's when active brought on many a great time for news gatherers to "be there" when the cops were there.

How many stories were found by me just having a location to know and the agency on that case. Many an exclusive I got this way and made good money selling my video to the media. worked the same way when I was doing still selling to news-papers.

These events happened only on certain freq's....so I had just one scanner programmed for these depts. in many agencies in my working areas.

Using this as an example: now with trunked there is no cohesion factored in to listening. Even with a radio which the police and fire give out....to news people...they just give out the main patrol channels....no more. PLus one service channel.

This system is composed of about 28 channels on their 800 system. some of them are not even in the book...mainly the detectives and SDU and vice and other "spotting" activities ....

To listen on scanner you hear all...but with nothing in concrete...you could be hearing five different depts. by the time the computer gets back to that one dept you were interested in knowing what was going on....say it was a murder, double. TWO nuns murdered...major breaking news item to get.

What happens is this: call goes out of a shooting at ? Cops get there and agree. Nothing is said about the NUNS. No word on two down. fire dept arrives and concurs and radios back to command working on two victims, or not. EMS gets there and says what they say: but EMS is on the trunked system and so Is fire dept. Here you have at least three depts talking about it' and you may have others in there too: sheriff, chp, parks dept. and more...

Cops love this. No PRESS making their lives hell with cameras' and requests for info and staffers trying to get past police lines to get closer shots...for the cops it's a living hell dealing with the press. They prefer not to. One answer: TRUNK the press out....when they do arrive, most of the time the victims have been transported to hospitals and no scene is there to get on video or still.

By the time the PRESS does arrive the tape is up from one end of the block to the other end....KEEP OUT. The cops prefer it this way. They don't give a good damn about the PRess Codes on th e State laws that give press access...they just don't give a damn.

With the Trunked system the cops don't have to deal with the press as often as they did in the past....this system allows the cops to do their jobs not worrying about what the press will see or won't see. Remember: the cops make up their own rules with the press and access to a scene. When they threaten to arrest....then the lines are drawn and either this illegal threat is challenged or not..most of the time it is not. The Media are neutered nowadays and will not fight to get access to an event where the laws are written to provide that access.

YOu have a lot of Press who kiss-up to all cops and anyone else they see as "dangerous" as to being kept from a scene...so they give in and allow the cops to tell them what to do, what not to get video of or stills, and then be happy with what they are Officially Allowed To Get video or stills of.....

The Trunked system has made the Press unable to know where it is happening until it is too late....then the cops have their PIO on hand to provide gargled info to suit the reporters and camera people who must get something for the next airing.

TRUNKED system means that by the time the incident is deciphered as being newsworthy....it's too late.

the press gets access is they get there fast enough because some viewer calls and tells them what is going down....otherwise, the Trunked system sucks...for the press. It's great for the cops.

that is how you have to look at what the trunked system is really all about.

Oh, remember the NUN bit...well, the cops get a sergeant to come to the scene and he gets on his 800 cellular phone and then calls into the LT and then the homicide called out and more...all with the cell call from the scene....the cell phone is used by all police agencies to talk about "matter they don't want the press to hear"....or the bad guys who have scanners.

Also, the cops use these special pagers which give messages in display mode....another way for keeping communication secret....

And lastly...cop cars have inboard computers....the newer ones keep all info between cars to cars and cars to hdqtrs. Police depts dispatch their units via computer....no one knows until the press does their beat checks and the captain releases the info about that event......

That is the reason for the trunked system: keeping the bad boys who commit crime from knowing what the cops know and from keeping the press at bay when that crime does go down.....

Let's see, Bill Cheek post's a FAQ. That gives PjB, Hugh, and now John a
right to take shot, flame and all out lie. Plus anybody who has received any good info from him and makes a statement in that effect is called a cronie, butt buddie, culprit and various
other words that John, PjB,a nd Hugh have proclamed. And yes PjB has said many things to me.

So, Yes Bill posted a FAQ, like it has been said. All was quite until Bill posted his FAQ. Then the bugs crawled out of the woodwork.

WHO STARTED THIS. Not Bill!

I Have no problems with You. But kids I do.
I do not like being threated and I take it seriously. John has made threats and actions are being
taken to stop that threat now.

Quick question - I have picked up what are airphone (of some
type) conversations somewhere around 894-896 (I think). I could
understand them, so they certainly weren't digital. Was it from a
commercial carrier (Delta, TWA...) or a private plane/jet?
BTW, it was on AM.

Probably true here...they are working a homicide, not giving tours of a crime scene. You must think about what is most important at that moment...the cops trying to solve the crime, or the reporter trying to get a picture for the paper. The crime scene is full of evidence that they don't want contaminated, and since they don't know what that evidence is until they find it, they don't want unecessary people wandering around...and that means unecessary cops, too. Once things at the scene are stabilized, they are more apt to let "guests" in.

> With the Trunked system the cops don't have to deal with the press

> not..most of the time it is not. The Media are neutered nowadays
> and will not fight to get access to an event where the laws are
> written to provide that access.

I've said it before, but here goes again. If cops were so worried that people were listening in, they would not invest in a 10-20 MILLION dollar system that merely makes it difficult to monitor. They would buy a 10-20 thousand dollar DVP system and make it IMPOSSIBLE to listen. We scanner listeners give ourselves way too much importance in the overall big picture here. I've been in the business long enough to understand that scanner buffs are waaaay down at the bottom of the worry list.

> Also, the cops use these special pagers which give messages in
> display mode....another way for keeping communication secret....

We use our "special pagers" for secret messages all the time...like "call your wife when you are done with your call." or "Stop by the 7-11 and bring a coke for dispatch." Granted, they do get used for official use, which is to notify off duty officers/dispatchers to come in to work overtime, or if the tactical team is needed for something. (Imagine trying to make a phone call to each tac officer in a hurry??? whew!!!) This is the age of documentation and accountability...and since pagers aren't recorded like the radio traffic, few departments use them for anything but notification like mentioned above. If they need to go to court about something, they sure as the dickens want to have it on tape.
>
> That is the reason for the trunked system: keeping the bad boys
> who commit crime from knowing what the cops know and from keeping
> the press at bay when that crime does go down.....
>
As far as trying to keep the press "out of the loop," you need to remember that the cops are doing a job...business...that's all. If someone gets in the way of them conducting business they are going to get told to go away. It isn't that cops really don't "give a damn," it is more of a case of they have more important things to deal with...like 2 dead nuns...than some guy wanting to take a picture of the scene for the local paper.

The press is very important in our country, even with its accuracy and objectivity in question as it is of late. Cops and the press need to work together, but each side has to remember that the other side is doing a job and needs some elbow room to conduct that business. The door swings both ways.

Andy

P.S. What about the ECPA law making it illegal to monitor the media's feeds and certain 2-way radio transmission? I don't see the members of the media marching on Washington insisting that eveyone be able to monitor all of their radio traffic...

It is a first rate, top notch scanner. You can't go wrong with it...

3548. AR8000, AM filter mod

Newsgroup: rec.radio.scanner
Date: 1996-07-22 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4t03iu$2nd@mrnews.mro.dec.com>
Source record: 229225

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

Ken

>light on this. Thanks in Advance -Dan-

It depends on what you want to do. I built a simple summing op-amp
circuit to combine my scanner and computer sound board outputs (I also
have a spare input) so I could hear both through my stereo. If you
don't have an amplifier, you could probably use an LM386 chip to drive
a speaker. I had to build a simple power supply to power the circuit
from 110V, but if you are going to use this in a car you could simply
use 12V (be sure to add spike protection).

: I heard a couple of dispatches over the last six months that appealed to
: my somewhat warped sense of humor. Anyone else heard anything amusing?
:
Nothing really funny, but the cops around here get bored after a while
(not a real high crime area, but a lot of officers). All the time they
whistle, whine, moan, play the am/fm radio etc into their radios. It got
so bad that one time the chief of police got on and told dispatch to make
them stop (only time I've heard the chief on the radio). Sometimes
they'll make coments after another officer says something, such as:
officer 1: "You can cancel that other car (or tow truck), I took care of
it myself".
officer unknown: "That's a boy, keep up the good work."

One other time, one officer had found an iguana or lizard (big one) and
was waiting for the animal control officer. The ACO said they'd be
awhile, and did the officer with the animal want to try to meet them
along the way to the station. The officer replied that was okay, the
animal was cool, and could wait.

My advice is to buy a used or new old stock Radio Shack Pro-2006 base. I don't know if you want a base or a handheld, though. Ask around about the Pro-2006 on this NG and you'll find out that the 2006 is THE best scanner ever put out. You could post an ad to buy one on here and get one I bet. Some R/S stores (VERY few) still have them. They will sell you a new one for around $300.00if they have one. Or pay around 300 to 400 here for a new one or a real good used one. They were $400 new and 350 on sale when they were sold. This base is better than the new ones they sell.
Features: Triple Conversion, nice looking, VERY easily modified, 400 channels, 10 limit searches, programmable priority channel, attenuator switch, tape out jack, speaker jack, dc power jack, can get many many books on modifications and enhancements, big yet small, and many more. I hope this helps. ICOMS suck! I don't know where to get one though. I'm sure you can find one, though.

What preachments are those, big shot? What is it that I have said that you
have found objectionable? Did the fact that I questioned your posting your
lengthy press release set you off? Is that all it takes? You little piss
ant--you can dish it but you can't take it, eh?

>
>So now what? Should I let them run me off? At least step out onto
>the playing field before deciding.
>
Naw, Cheek. I'm not going any way. My initial thought was to keep quiet
and let you blather on about the things that you like to talk about
(mainly defecation and fecal matter). I kept my mouth shut until you
posted your press release. I asked if you believed that it was appropriate
and you responded, as you always do, with your trash talk.

Tell me Bluster Bill... Have you ever sold one of your famous CE232
interfaces? No one ever talks about it; no one ever says that COMMTronics
makes a fine product and offers superlative support. Why is that? It must

be because they are impressed by the kind of person you are, eh?

I used to be dispatched in a city in the Metro Atlanta area. One night we had a call from a local tanning bed. The woman called to report a pervert. I asked if he was there now. She said no, but he left behind a souvenir. I asked what. She said, "A fluid." I asked "What type of fluid, ma'am?" She replied, hesitantly, and somewhat embarrased, "Sperm."

I had to chuckle a bit. The hard part was that I've never dispatched a call like this...so I was looking for a good Signal to use ... I couldn't use "Indecent Exposure" since he wasn't there .. and we have a catch all "Signal 89" where it's Signal 89 "Description" ... I didn't want to use "Signal 89 Masturbation" either... Nonetheless, I did send it out as the Indecent Exposure ... and me and the officer went to the Tac channel to explain what it was... and he about lost it...

Nonetheless, he was ribbed about it the entire shift.

If you follow the threads here, you'll see where Duff started it when
I posted a FAQ. Mackey, Alexander, and Boe jumped in when Duff called
"Dogpile".

It's not an "old enemies" thing. I kicked Duff and Mackey off the
moderated SCANRADIO forum for acting there like they are here. So
they're sniveling here where no one can touch them.

I don't hate anyone..... I'm just seeing who all is interested in
scanners and scanning.....and found me FOUR for sure who are not.

>you?

Mister Michael Alexander, you seem unable to discern fact from fiction, and to make matters worse, you create fiction and weave tendrils of fact in to make it seem so cooooooool, but the record proves your ineptness and impotency.

My FAQ brought His Royal Duffship galloping to the rescue. Just my FAQ. Only my FAQ. Nothing more than my FAQ.

The Press Release came later......a week later, and largely as a result of Duffmeister and Company's sniveling and flatulating over it. I mean, Geezus H. Kriste, if they're going to snivel over that FAQ, I might as well test 'em and see if they can raise a cacophony.

THAT brought you galloping to battle, pooping your pants and belching Alexander gas all the way. Typical of the Great Michael Alexander, Lord Flatulator and King of Royal Loyal Scatological Society.

What a fine, magnificent specimen of a human being, you are! You're another one who can make me feel soooooo goooooood! Knowing you, Mister Michael Alexander, is like wearing a dark blue wool suit and pissing your pants.

Gives a warm fuzzy feeling and no one notices. Keep up the good work, my finely preened dingleberry. You're doing very well.

You're looking in the wrong place. Please try to at
least have a nodding acquaintance with the FACTS before you
broadcast your misconceptions. US Federal Law prohibits
LISTENING (not just SALES) to certain types of radio
communications, including cellular and cordless phones.
Look up Title 18 of the United States Code, Sections 2510
through 2520. These are not "Fcc Rules and Regulations" -
they are Federal criminal law.

You didn't pay any attention to what has been said then.

In earlier messages I said I am familiar from the fidonet. Specifically, the
fidonet echo "Scanradio", a nice echo which he ruined & will never be the same.
This specifis issue dates to late last & early this year.

Get with it.

understatement about this....we listen and we go. To
hear is to get video or stills. Just that trunking is
the answer to keeping the press away....or the bad boys
and girls from listening to their traffic.

IF the digital system was used, yes, no one will know.
but it costs a lot and won't go down in price for awhile
longer til them improve it so all agencies will want it.
San Francisco is reported to be getting into the digital
radio system...eventually.

>>

I've been in the business long enough to understand that
>scanner buffs are waaaay down at the bottom of the worry list.
>
> What business are you talking about in the first person?

I am talking about PRESS as the operative listener who needs
all info in order to "go" or not to go...to a scene.

YOu say we use special pagers....we being ?

I don't think we are talking about the same kind of use.

Pagers are used in ways which the cops won't even admit to
using them for....the pagers are very sophisticated means
of delivering any kind of communication needed by cops....

Sorry, it swings one way and one way only....Their Way.

It is not my part here to get into this venue...this is
why trunked systems are so well-received by police depts
in that they keep the press away....longer than before.

That is all I wanted to illustrate.....

>(No Flames) Respectfully submitted with only safety in mind.
>/Jim /N1CRZ

I see what you're trying to say, but there are several things that
come to mind.

1) I've been in a situation where the pilot used a handheld GPS, 2 way
COMM radio and cellular phone during the flight. It was in a light
aircraft (no IFR cert.) with minimal navigation/communication
equipment. However, it did have a compass, airspeed indicator,
altimeter, etc.

2) During Approach and Departure (in VFR/visual conditions) pilots
rely less on the instrumentation. The main points of interest during
this time are the engine gauges, altimeter, compass, VSI and airspeed
indicator, none of which have an antenna nor are especially sensitive
to RF. Approach to an airport +- 10 degrees even would be fine,
provided the PIC could visually acquire the field. In true IFR
conditions or bad weather (landing in weather, low clouds, stiff
crosswinds etc.) I could see the need for safety. However, much of
the time a handheld receiver would not jepardize the safety of the
flight.

3) Computers emit much more noise than a FM radio/walkman/scanner.

(No Flames) Respectfully submitted, just stressing my point.

Regards,
Adam

I'm not a member of the press, but I have been to several
local police/fire scenes and find that the press gets
there first about 25% of the time (guestamet).

A frind of mine is a newspaper photographer and I've
met him at the scene several times and he seems to
have a good repore (sp?) with both fire and police.
On several occations I've seen him snapping away
and making small talk with the FD/PD people.

On some of these calls I've been able to pass the
police line to talk to my newpaper reporter
friend and have gotten some great information
on radio scanning from chatting with them.

PLEASE keep in mind that it's not a good idea to
go "Amulance chassing". The only calls I've gone
to have been in my own neighborhood and I make
a point of STAYING OUT OF THE WAY! The police
and fire have enough to deal with without having
bystanders to watch out for.

I don't know about the policys that your local
PD or FD have, but in the town I live in the PD
and FD use the media the same way that the media
use them.

If your in the media (I don't mean to tell you
how to do you job) you might trying a little
social engineering to get your next exclusive.
It's worked for my friend and now he gets
INVITED to take ride alongs with the PD/FD.
He got a bitchin' photo of during a police
gang sweep of a guy answering the door at 5am.
Greeted buy several PD/SO/INS/Parole officers.
The photo was one to remember. He's half dressed
and in a full yawn when he answered the door :)

Oh, and I was home listening to them all this time.

That seems to be common. When I worked for the New Mexico State
University Police Dept., we got a BOLO on the teletype every Christmas.
All of the local departments would broadcast it out to their units.

Cheeks academic background is spotty to non-existent. He is essentially a garage-bench tinkerer who happened to accumulate a uselessly enormous amount of info on a couple of Radio Shack scanners. This he parlayed into 3!!! books (count 'em) and will no doubt go for a fourth. Who would publish him? Well, Cheeks doesnt sell alot of units. Lets face it, as much as we enjoy scanning, it isnt a very large market, to say the least. A freind who works at Radio Shack told me that they will probably get out of the scanner market altogether in a few years. Theres just no interest he said, especially with the advent and widespread installation of 800mhz systems. So as Cheeks's market shrinks, so do the ethics he employs to sell his toys, as you can see by by his refusal to stop trying to peddle things here.

Geezus H. Kriste, man, your endorphin count must be running low these days. Grab a good book.....THE ART OF ELECTRONICS will do....and get boned up on the modern age. LSI manufacturing techniques and modern designs make components more reliable than YOU could ever except.

The one-in-a-billion exception is what you're harping on; I am talking about the other 999,999,999 instances. You are talking about analog or digital devices operated in an analog environment. I am talking about digital devices operated digitally. In terms of the sheer odds and numbers, a digital gate operated by a digital clocking or pulse source will simply never fail....UNLESS it is made to fail.

THAT can happen in complex equipment under a variety of stress, but in scanners and other consumer equipment, even that exception remains much the isolated case.

Let's put it this way....and no offense......but I have worked on more scanners than you'll ever comprehend......and I have NEVER found a failure in post-1986 scanners that was not attributable to an instance of "made to happen". Failure analysis and the mathematics associated with it is among the tools in my warbag. I scrutinize every failure that comes across my bench. Always have - always will.

You like exceptions. Ok, here is one. Three port voltage regulators can fail for reasons that sometimes can't be established. Please allow me the luxury of excluding them from my statement. But then VR's are analog devices anyway - not digital. Analog devices always have a lower MTBF than digital. Always..... I probably have encountered a few analog failures in scanners since 1986 for which I can't account, but most of those were voltage regulators, bad solder joints, or worn out moving parts.

Also, I am not talking about wear and tear on moving parts, including connectors and posts that bind wire bundles that move. But again, THESE are analog issues.

I have never encountered blown CPUs or other digital devices that weren't otherwise made to fail by overclocking, inadvertent shorts; or other physical, pseudointentional intrusion.

>Hahaha ! Maybe in your days of CB repair you got to see a little
>too much work from the screwdriver technicians

Cut the crap, Duff. You want to talk sense? Then talk it. You don't want to get slammed? Then don't slam.

>Do yourself a favour and call up the service department of any or all
>of the major electronic manufacturers of consumer electronics and ask
>them how often a VCR or TV or piece of stereo equipment gets brought
>in for repair...and ask them how many of them were 'tampered' with.

I was CEO and member of the board of directors of a manufacturing corporation, Duff. The company mass produced linear amplifiers, preamplifiers, transmitters, LNBC's, and other high tech comm equipment for amateur and commercial deployment.

I am WELL versed in the arts, sciences (and black magic) of electronic design, manufacturing, and product support.

In a word, if it has moving parts; can accumulate dust and other environmental pollutants/corrosives/hazards; and if people can mess with 'em, then there will be failures. Those failures are analog in nature. The digital side of electronics, (given a properly designed device), does not fail without reason. Again, I am talking the numbers....and I do not have the resources to investigate that 1 out of a billion exception..........

Do an experiment, Duff. Call up Seagate, Western Digital, Quantum, and other manufacturers of hard disk drives, and ASK about the MTBF of their drives. The answers will range from 200,000 to 300,000 hours. Figure it out. That's up to 34-years, pal. Guess what the MTBF of a CPU is these days? Take a wild ass guess.............

> BEEEEEP, WRONG ! I really hate to break it to you but electronic
> components DO fail on their own.

Not digital ones. We all know electrolytic capacitors "dry" out. Vacuum tubes get gassy and their cathodes eventually become pitted and thermionic emission degrades. Relays wear out. Switches, volume controls, motors, and other analog devices wear out. THAT is obvious and should be exclusive of this conversation without any requisite verbosity to disclaim it. Analog failure is prima-facie.......we take it for granted. Ok? I should not have to educate you in the semantics and nuiances of the English language. We should not have to exemplify the obvious.........

>HD> >CMOS parts are notorious for showing signs of malfunction

>BC> Hogwash. Read the specs on CMOS chips nowadays. Do you know what
>BC> "diode protected" means? It works, too.
>
>Unfortuately diode protection does not render a CMOS part resilient
>to static...they are still to be treated with precaution.

Reasonable precaution, sure. Ummmmmm, my CE-232 Scanner/Computer Interface uses the Motorola 68HC11F1FN MPU...and of maybe a thousand sold over the years, there have been two failures of the chip, and both instances were attributed to bungling and ineptness of the kit builder. Two, Duff. Now given over 500 hobbyists (the balance are pro-shops, cellular companies, and other industrial entities), you'd think that if it could fail, it would. Two is such a low number as to render your argument at best, theoretical, and otherwise philosophical or rhetorical.

> Go into a REAL electronic repair shop ie...one that does Military electronic
>repair and have a look on the service benches...betcha a fin they STILL
>have antistatic mats, wriststraps and other forms of precautionary
>measures in place. They're not there from before the days of the
>'input protection diodes'....they are in place because CMOS parts STILL
>require careful handeling.

Yes, Duff, I know. And THAT is why you PAY much more for the price of a product than it is worth. On the other hand, MIL-SPEC is supposed to help ensure freedom and liberty, so we'll chalk up a portion of the price to the cost of liberty. But still.....especially in the consumer market, much of the cost of goods sold is spent on covering someone's ass that does not inherently need covered....a waste.

I am well versed in ISO-9000 and other Quality Assurance programs and procedures. The thing is, I do NOT appreciate paying for a 34-year MTBF on my hard disk drives. Five to ten years would be quite sufficient, thank you. A 1-Gb hard drive costs $200 now. It could cost around $150 or so and still render a service life far beyond it's actual useful life. (I've got several 40-Mb to 120-Mb drives laying around here not in use anymore...) and I STILL have to pay for them.

"Careful handling", my ass.....there is "theory" and there is "practicality", and the two are often miles apart.

>I think your lack electronics knowlege is shining thru at this point
>Willy. A person like you might think about clamming up before
>totally disclosing his lack of knowledge on a subject that he claims
>to be an expert at.

You know, Duff, it's statements like that which literally slam the door on any chance of positiveness with you. I have 33+ years of hands-on electronics, from space and satellite communications to radar and sonar to precision navigation; air pollution metrology, stereo and hi-fi, scanners, CB, amateur, and land mobile radio, meteorology, and even electronic surveillance..... and you take the liberty of calling me stupid?

THAT was what got you booted from the FidoNet SCANRADIO forum and it's what makes me look down on you like I'd look at a pissant now. Don't shake your head wondering..........

>Like I said, The CPU was bad....End of discussion !

Like I said, it was MADE to go bad, or you inadvertently corrected a defective solder joint.

>->->Go away.

Mr Smith
It's pretty obvious that you have not been following the threads of these messages. For some reason, all it takes is Bill to post some USEFUL information to these areas on scanners and somebody comes back and slams him and his info. The best that I can figure it's because they themselves do not posses the knowledge that this man does and therefore do not believe that he does. Bill has the credentials, tested and proven methods, and the desire to further the knowledge of this hobby with others and he gets kicked for it.

Bill has, for a long time, provided endless professional information to this and other newsgroups. His books (3 that I know of and have) have been published and more have been requested of him on the subject of scanner modifications and tips. You can find them thru "Index Publishing Group" out of San Diego Ca. It may be a small company but the books are widely available on most bookstore shelves. If not they can order and get them within days.

As far as his professionalism in this group, he starts out in a very professional manner and others then start PUBLICLY flaming him, therefore a public reply is usually required when they have bogus e-mail addresses. Bill will respond and usually set the record straight and from what I've seen usually rather quickly and fairly. The man has no reason to START anything more than passing info to the group which he does quite well. If those that have nothing better to do than flame people would just leave it at that all would be good here as it has in the past.

No, Bill Cheek should NOT go away (as if he would anyway... :))

My two cents worth, I've been here on this group for 2 years now and it has always been the same and as long as there are those that are jealous and envious I have to assume that it will continue.

Back your newsreader up about a month if you can and retreive some of the threads and do your homework. You'll be surprised at what you may learn.

Shaggy

> Hi Bill

> There's a 1 inch section of my 9913 cable in which the outside rubber casing
> has been torn away. The interior looks OK. I wrapped the area with
> electrical tape. Am I loosing any sensitivity with this fix?

Not at face value of what you said, no. But that spot definitely is a weakness where moisture and environmental agents can enter and begin a process that will eventually harm the function of the coax.

If I were you, I'd examine it closely until you are satisfied that all is well, and then goober the area with a silicone rubber sealing compound; let it cure; and then securely wrap the area with black plastic tape, several layers deep, and overextending the slice by several inches at each end.

This will be a more or less permanent fix so long as you inspect it every six months or so, and redo the tape and silicone as needed.

Rgds,

Bill

Actually, the failure model for many parts (including hard drives, I suspect) is called the "bathtub curve", because it looks like crosssection of a bathtub with number of failures on the y-axix and time on the x-axis. The practical application of this is that many parts (relatively speaking) fail early in life, due to many different phenomena known collectively as "infant mortality". Parts then enter a part of their life where there are very few failures. After this period (for many solid state devices this period can be very long) they begin to fail at a higher rate as they "wear out".

The point is that MTBF (MEAN time between failiure) does not tell the whole story. Parts fail both before and after the MTBF point. The reason that the MTBF is longer than the average useful life of a given product is that the manufacturer is trying to reduce to number of parts that fail during their useful life.

In other words, a hard drive with a MTBF of 5 years is certainly no guarantee that a particular hard drive before 5 years. I am willing to pay $50 extra for a hard drive that has an MTBF of 34 years as opposed to one that has an MTBF of 5, because it generally indicates that the chances of it failing during the first 5 years is reduced. Apparently, most of the people buying hard drives feel this way as well or the manufacturers would be selling less reliable hard drives at a lower cost.

>Yes, Duff, I know. And THAT is why you PAY much more for the price of
>a product than it is worth. On the other hand, MIL-SPEC is supposed

>>these flames.

No, you're not correct. The "common thread" appears to be, at least to me, illiterates spouting unsubstantiated anti-Cheek nonsense.

I find it intriguing that I can telephone a firm, get answers to my questions, have them accept my check(s) for services/newsletter/ merchandise, receive all items on time as promised, receive follow-up phone support, and be totally satisfied with them...while others here seem to have extremely poor relationships with any and all they come into contact with.

>

I used to be dispatched in a city in the Metro Atlanta area. One night we had a call from a local tanning bed. The woman called to report a pervert. I asked if he was there now. She said no, but he left behind a souvenir. I asked what. She said, "A fluid." I asked "What type of fluid, ma'am?" She replied, hesitantly, and somewhat embarrased, "Sperm."

I had to chuckle a bit. The hard part was that I've never dispatched a call like this...so I was looking for a good Signal to use ... I couldn't use "Indecent Exposure" since he wasn't there .. and we have a catch all "Signal 89" where it's Signal 89 "Description" ... I didn't want to use "Signal 89 Masturbation" either... Nonetheless, I did send it out as the Indecent Exposure ... and me and the officer went to the Tac channel to explain what it was... and he about lost it...

Nonetheless, he was ribbed about it the entire shift.

From the FAQ:

AR2700: 1995 vintage. 500 channel portable covering 500 kHz
to 1300 MHz. Lots of good features, e.g., 10 linkable
search banks, lighted keypad, per-channel attenuator, S-
meter, battery meter, optional voice recorder and speech
inversion descrambler. Global rescan and pause delays, but
no auto store, data skip, nor battery saver. Internally
generated noise results in broad birdies on AR2700 tested.
Insensitive carrier operated (vs. noise operated) squelch
stays closed on signals unless they are moderately strong,
causing scanner to skip transmissions of interest. IFs are
287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700
Portable Scanner," by Bob Parnass, AJ9S, in Monitoring
Times, October and November 1995.

Reprints of articles from Monitoring Times are available
for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, 300 S. Highway 64 West, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $2.00.

>below 25mhz.

As far as I know, no RS 400 ch scanner (Pro-2004,5,6, 2035 or 2042) can be modified for those ranges. The 520 to 760 is TV audio and video, so not much there to hear anyway. Below 25 MHz the reception would be poor because the thing isn't tuned to "hear" that low.

BTW, each scanner is a bit different from the others, so best thing to do is to identify exactly which one you have when you have a question.

Plenty of activity going on here. I'm abot 15 miles NE of crash site. Alot it handheld, low power UHF.

In fact, it sounded like the DOD turned off selective availability for a little bit to get an accurate fix..

Source record: 229008
Cross-posted to: rec.radio.scanner,rec.radio.swap,dc.forsale.misc,um.forsale,misc.forsale.non-computer,balt.forsale

I have for sale a Bearcat/Uniden BC-8500XLT scanner. Covers from
25 - 1300 MHz minus cell (but can hear as images up around
1250 MHz if you want to listen) and minus (I think) 520-760 MHz.

Sensitive receiver, has 500 memories, will automatically scan
a band and store unique hits. 20 banks of 25 memories each,
very fast scan, alphanumeric display (name your freq's!), VFO
knob, direct frequency entry, and a bunch of other stuff I
can't remember right now.

In excellent (close to new) condition, always stored
under a towel. Comes with telescoping whip antenna, box,
manual, and original packaging.

ALSO INCLUDES optional CTCSS decode board! Asking $275.

Great base scanner, but I am looking at some more QRP gear
at this point in time and need to raise funds.

E-mail or call, THANKS!

>I've just spent a week going thru it with you.

Not straight and up front, you haven't. You've been going over spilt
milk of months ago in another place that has nothing to do with here
and now.

>I'm willing to wind this thing down...All I wanted was to have my say...
>blurt out and get my greivance with you off my chest.
>Done unless you persist.

Then it's done....not accounting for "message delay" of recently sent
but not received/responded mail. You've had your say and there isn't
a thing I can do about the past, perceived or real.

The present counts. AND for whatever it is worth, I am in a very
unique position of being a hobbyist foremost, followed by a
simultaneous existence in the profession and business of radio.

I am going to post an occasional FAQ and even a Press Release, and I
don't have the foggiest idea of HOW I can totally separate the
professional side of me from the Hobbyist side of me. My ability to
create a FAQ and post it to the forum is a combination of BOTH sides
of me, and I can't sterilize it to the satisfaction of those who want
me gone or to ride my wave. If I were strictly a dumbass hobbyist
like our good pal, Peter J., then I'd be like HIM and not post
anything of worth. I'd just be like HIM....like a housefly, and
bother people.

Plainly put, I am not going to be taken to task for serving my Hobby
and being in the business, too. I am going to exercise reasonable
caution - perhaps even go the extra mile - in terms of avoiding

blatant commercialism, but ONLY because I don't like to mix business with pleasure in that sense. On the other hand, after 33 years of being a hobbyist and a professional in radio, I have yet to see even the slightest possibility of surgically separating the two. It is not possible. So I am what I am......and there will be times when one or the other or BOTH sides of me show in my articles and postings.

I am NOT going to be taken to task for that. You speak of CONFLICT OF INTEREST. Sure there is. But it's out in the open for all to see. It's not skillfully hidden under disguise, like SOME OF THE SHILLS for other companies that are here!!!!!!!!!! You don't see 'em, because they're masquerading under the guise of the Hobby.

SHILL: "Hey, Hugh, I just got me one of those new Horsey-Cow 6969 scanners, and man are they ever hot stuff!"

HUGH: "Far out. Where can one be had?"

SHILL: "Horsey-Cow, Inc. 6969 - 69th Place, Podunk, Iowa 69696 and the have a special deal on software for it, too."

You zero in on ME because you KNOW what the score is and I don't make any bones about it. Meanwhile, twenty others slink in and out of here daily, doing their dirty work, and you miss the effect of what's going on in its entirety.

Something is wrong with that picture. But yes, indeed, I am in "the business". That's why a lot of me comes FREE for the asking of a question here. I won't sell someone a book or my WORLD SCANNER REPORT or even a mod-kit or instruction sheet if.....-=IF=- .... I can adequately and properly meet his need for free here.... If I have to go do an hour's research, then chances are I will tell him where that work has already been done and direct him to THAT source, whether it happens to be mine or someone else's.

Whenever there is a duplicity of sources - mine and someone else's - then I try like hell to include all the options and alternatives.

It's the best I can do, Hugh. For some, it ain't good enough, but then nothing will be good enough. So I really don't care about THEM. For the majority, it is good enough and it's to THEM and their drummer that I will march, me and my drummer. This necessarily excludes Hizoner Michael Alexander, Johnny Mackey, Peter J. Boe...and maybe a few others.

Tough. They can pack sand or whistle "Dixie" for all I care. Or they can shut up and tend to their own business.....and leave me the hell alone so I can leave them the hell alone.

On that note, it's done, unless you want to talk about something herein or other pertinent matters in an upfront, straight manner. We don't have to agree. If flames are not satisfactory, then don't flame me. Don't leverage one side of me against the other side. Don't

leverage, period. Then we don't have to agree and we can still get along just fine. If you were a US citizen and were a Republican, and me a Democrat, I'd offer to hug your elephant and let you kiss my ass.

But since you're not a Republican and I'm not a Democrat, we don't have to cross that bridge. That's one obstacle out of the way. Eh?

Bill

I'm afraid you're a bit on the naive side, Mr. Shaggy. I will let Mr.
Cheeks speak for himself, though. I have access to logs of much of the
past activity on Mr. Cheeks FIDO scanner forum, ScanRadio. In the
following post, he lays out rather succinctly how he feels about this
group:

Date: 30 Apr 96 07:31:03
From: Bill Cheek
To: Kurt Shedd
Subj: Anarchy in the Newsgroups

Yo! Kurt:

Friday April 26 1996 16:00, Kurt Shedd wrote to Bill Cheek:

KS> On a side note, I have found it interesting once again on the
KS> scanning newsgroups to see the people from here who have left use
KS> certain phrases and words to describe the very scanradio they wanted
KS> to be in (Not to mention the flattering words they have to say about
KS> BC). Most of what is said I let go over my head, but must admit that
KS> once in a while you let yourself get drug down to the 1" cranium
KS> thickness level, and say things that could have been left alone, but
KS> then again, I must admit that I am not the one being denegrated, so I
KS> might respond in similar fashion, just a little more toned down.
KS> (maybe that comes from being over-educated.) Kurt...

Those are the people who wanted to turn this echo into a FLAME forum, too.
They were proscribed from doing it, so they went to the anarchy of the
newsgroups.

You're right, once in a while when I have a minute, I hop onto
rec.radio.scanner and hose them down a little. Who cares? What
difference
does it make?

(....deleted)

I can't control it on the newsgroups and therefore do not participate there
to any appreciable extent.
Thus, this echo will prove to be a refreshing oasis to people like me who
are more interested in high technology and using radio.

--- End Quoted Text--

Well, as you can see, Mr. Cheeks is back aboard to 'hose us down' a
little. Enjoy the spray....

> Back your newsreader up about a month if you can and retreive some of the
> threads and do your homework. You'll be surprised at what you may learn.

For Sale : Standard CCR708A, Asking $650.00 or best offer or even
willing to trade. I've bene using it for packet radio and
Aircraft listening.

+LCD Spectral Display in steps of
1 MHz, 250 kHz and 100 kHz
+No Cell Block

-- from Standards Web Page --

CCR708A VHF-UHF wide-band receiver
* Spectral display scope
* 100 memories
* Receive 50-904.995 MHz
* Receiving modes, AM, NFM and WFM
* High precision PLL synthesizer
* Operates on 13.8 VDC
* 120 volt 60 Hz wall transformer included
* Ideal for the service bench
* Equipped with LCD display
* Supplied with a telescoping antenna
* Audio output 1.8 Watts
* LCD window display 1 MHz, 250 kHz and 100 kHz
* Extremely well built to industry/Mill. standards
* Dimensions: 2.95" (H) x 7.09" (W) x 7.09" (D)
* Weight 4.63 lbs

From: ormos@mcs.com
Message-ID: <4t3c57$mk6@Mercury.mcs.com>
Source record: 229020

In article <4t1cht$nss@sjx-ixn5.ix.netcom.com> (posted to rec.radio.scanner on 23 Jul 1996 02:14:21 GMT), bill conduit <myway@ix.netcom.com> writes:

= The PRESS are one of their main concerns....make no
= understatement about this....we listen and we go.
. . .
= Just that trunking is the answer to keeping the press
= away....or the bad boys and girls from listening to their
= traffic.
. . .
= ... this is why trunked systems are so well-received by police
= depts in that they keep the press away....longer than before.

The primary reasons why police departments, governments, and many other large consumers of radio communications services are deploying trunked systems are fiscal. Trunked systems are perceived by the market as being more cost efficient than conventional systems. They certainly provide greater spectrum efficiency and may provide operational advantages.

A trunked system using a given pool of frequencies can support many more users with reliable, non-blocking service than conventional systems using an equivalent number of frequencies. An operator of several independent conventional radio systems often may reduce the total number of frequencies required by implementing a single trunked system which serves all of the users of the several conventional systems. Since fewer fixed station transmitters may be required, implementing and maintaining a trunked system may be less expensive than implementing and maintaining several conventional systems.

Additional groups of users often may be added to trunked systems without increasing the number of channels. But even if more channels are required, the number of additional channels needed is likely to be smaller than the number of channels needed to support an equivalent number of users in a conventional system. In contrast, implementing an independent communications system for a new group of users carries a high marginal cost.

There are a number of operational advantages to trunked systems, as well. Trunked systems can degrade gracefully in the presence of some types of faults which would completely disable many conventional systems. In addition, when wide geographical coverage is required, a trunked system may provide a better overall solution than an equivalent conventional systems.

DH>Dave,
DH>Set your search limits from 108.0 to 137.0

DH>not sure of steps though

Civil aviation frequency increments are 50 KHz in the 118-137 MHz
voice communication band. 108-118 MHz is for radionavigation but
airport towers can duplicate voice transmission over VOR/VORTAC for
the benefit of light aircraft piloted by one sweaty nervous person
at the controls. Most towers of any size now have tape loop
transmissions for airport weather conditions ("information alpha" to
"information zulu") and are generally better than weather reports
sent by commercial broadcast stations.

VHF airways comm is basically: Ground control, tower, approach and
departure control and center. Aircraft enroute over water to another
continent will be handed off from a center to HF SSB enroute
frequencies; they will shortly be out of line-of-sight at that
handoff time. It might be interesting to follow a particular flight
from gate rollout (ground control freq) to the runway end (tower
frequency from there), then the handoff to departure control
frequencies when airborne, finaly to an area center frequency when
they get to altitude.

The easiest way to get exact information on frequencies is to call an
FAA tower or flight service telephone number and ask. The FAA folks are
ordinary humans and usually appreciate that someone inquires about their
otherwise-maligned job task. Lacking that, one can always scan the maps
that come with Flight Simulator; frequencies don't change much over the
years in civil aviation. :)

3661. Re: Correct Antena Length for

Newsgroup: rec.radio.scanner
Date: 1996-07-23 00:00:00 UTC
From: len.anderson@mogur.com
Message-ID: <9607231450081024@mogur.com>
Source record: 229022

MC>From: mdhudon@intranet.ca (Marc Chouinard)
MC>Subject: Correct Antena Length for RR Frequencies

MC>I was wondering if any one knew what the correct antena length was for
MC>the railroad frequencies from 160.110 to 161.565 megahertz.

MC>Is there a formula to calculate this (I'm sure there is)?

A quarter wavelength in feet is = 234 / (frequency in MHz). For
midband on your frequencies, a quarter wavelength would be =
234 / 160.84 = 1.45 feet = 17.46 inches = 44.3 CM. [that can be
rounded off to an even 18 inches or 45 CM or something close enough,
that is a narrow band] Most railroad antennas I've seen are
vertically polarized.

An easy way to make a cheap vertical antenna is to operate on the end
of a coaxial cable. Strip away the outer jacket insulation for a
quarter wavelength (17 1/2 inches in this case, give or take). The
hard part is next: Fold back the outer conductor braid (fish the
center conductor and its insulation through a widened hole in the
braid near the jacket cutoff) until it is another quarter wavelength
length, insulated via the remaining jacket insulation. It would look
something like this:

```
exposed braid
====================| center
-----------------------------------| conductor
-----------------------------------------------------------
-----------------------------------|
coax ====================|
cable
|<------ 1/4 ------>|<------ 1/4 ------>|
wavelength wavelength
```

That is a "coaxial skirt antenna" laying on its side. It can be
taped to a wooden pole or even a window shade roller bar (remove all
metal inserts) as mechanical support. A wooden broom handle works
fine. The wood changes the antenna characteristics only slightly,
won't affect receiver operation. Do NOT mount it parallel with a
metal rod of any kind (that effectively shorts out the dipole).

This will look terrible when finished, highly unprofessional, but
radio waves don't care for appearance. I had one up and outside for
two years, cut for 122 MHz and mounted above my FM broadcast
turnstile antenna. The masking tape finally gave up holding things
in place but the antenna, such as it was, worked fine. :)

Indeed. These are some of the more despicable methods of Mr. Cheeks. He
loves to make people think he has the goods on them and thereby intimidate
them into retreating from confronting him with his commercial postings in
this group. I would say to anyone receiving this kind of threat from
Cheeks to ignore it; its all blather from a little man with not much to
do anymore except raise petunias. <snicker> <giggle> <horselaugh>

Donald & all:
I agree with you Don. From all of this I have re-confirmed one of
my personal beliefs which is that some adults are no more mature
than pre-teen children. It's bad enough that so many of us are forced
to endure all of this but its downright shameless for these people
who claim to be radio hobbyists and/or professionals to do this type
of damage to a otherwise decent public forum. It makes absolutely no
difference who started it (mommy, mommy Billy hit me).

Now, however, it looks like they've decided to also bastardize
alt.radio.scanner as well.

This is my only and final post regarding this matter. Its too bad innocent by-standers have no rights.

Also,

The repeaters in the 460 Mhz range are licensed to individual Fire Companies. For example, 460.625 repeats several low band channels. I am not sure of the reasoning behind the repeaters.

Hi Tim,

I just purchased the Opto DC440 all mode decoder (with optional nicad
battery pack) a few days ago and found that I works great with my AR8000.

The DC440 decodes CTCSS, DCS and DTMF.

There was a murder at 5th & main today. The media missed it becuase they were not given access to the city trunk.
They also missed the fire , serious accident, etc. They did manage to get the fluff. Public relations type shots.
Now for the broadcast/daily paper, will not have much info on the incidents becuase the PD/FD does not KNOW the media wants this info. After all you did not call on the two alarm fire so you must not want the info.
Okay called in at 11:00 second alarm 11:15, under control 12:30, cause under investigation.
the coverage stinks, people lack respect and confidence in their local police/fire depts becuase they do not see them doing anything.
Beleive me, I've talked to some great PIO's in my time, and I'd much rather trust the LAFD that puts their freq. on the web rather than the FD chief that says are conversations are private etc etc...

As a dispatcher I'll relate a couple of good calls ...

The general practice to call out a traffic stop is to advise your unit ID and that you are 10-50. When acknowledged, you give the tag, vehicle description and location, in that order. This call was a tad different ...

Car: 402 10-50
Disp: Go ahead 402
Car: 402, FL tag AAA00A, white Olds four door ...
YOU DUMB ASS PEOPLE !!!!!

What had happended was that the car he was stopping turned left through 6 lanes of traffic to get on a side street before stopping.
The driver was cited.

We also got a fire call, last week as a matter of fact, for a person with a severe case of diarrhea. On dispatching, the Captain of the rescue unit asked where the ambulance was responding from. We got that info and told him. He then said that rescue would not be responding, that EMS could handle it. That was the extent of the radio traffic.

We then got on the phone. Our question was, are rescue units now refusing to go to any of those shitty calls ??

One afternoon the San Jose PD were "watching" various bikers at a gathering they were having. [Presumably to serve a few warrants as I suspect these guys are not a pretty site!] The bikers proceeded to a bar in Los Gatos well known for illicit activities (Otto's Garden Cafe). The bikers ate lunch there and then headed back into San Jose. The San Jose PD kept up the surveillance. The officer "called it" like this:

"The subject is heading behind the building. He is heading for the dumpster. He is opening up the dumpster. He is throwing up. Hey, aren't you guys glad you didn't eat at Otto's Garden Cafe!"

>calling in, I would like to see the statistics. I have friends in law

I'd like to know where all the appeals on those convictions went. The rules of evidence are pretty stiff nowadays. What exactly would a scanner user be able to contribute as direct testimony in court? How many scanner users were subpoenaed to testify at trial because they had a scanner and called the police about an incident? That's the ONLY way a scanner user could be involved in "getting a conviction" in a criminal case, and I suspect that most of their testimony would be ruled inadmissable in pretrial hearings.

I've communicated with Mr Cheek a few times in the past and found his replies to me to be that of an individual with the sincere intent to assist me in my quest for information. I have made use of his manuals dealing with improving the capabilities of scanners and while I am not very capable with the inside of a radio, followed the desired instructions and managed to end up with my scanners doing a lot more than they could have done before. Had I needed to pay a technician to do these things, I would have been payning a lot more. Finally, I think that Mr Cheek has contributed a significant amount of information on the hobby in this forum without charge.

Well, I live on eastern L.I., about 12 miles or so from the crash site. I've
been listening since Wednesday night when the tradgedy occurred. The first thing
I heard was a local PD unit reporting the explosion and fireball. There was a
lot of marine, aircraft, PD, fire, etc. traffic that night. Since Friday,
however, virtually ALL of the traffic regarding the search and recovery is
SECURE. Due to the possibility that this was a criminal act, that's not at all
suprising. There's plenty of other activity, but the only stuff in the clear is
just routine traffic. There was a list of freq's posted a couple of days ago
that was pretty complete, so I won't be redundant unless someone still needs
that info. If so, drop me an email, and I'll post what I have. I can tell you
all this...while I DO enjoy the scanning hobby, and other aspects of radio, I
hope I NEVER hear something like this again. 'Nuff said.

> and girls from listening to their traffic.

Where do you get your statistics? How many police department and/or city council members have you interviewed about why they like trunking? Have you covered the council meetings where the discussion of whether to buy an expensive new trunked system took place? How many cops have you talked to about this? 100? 1,000? How many Motorola or Ericcson reps have you spoken to about the advantages of trunking? If you have done all this, and can come up with some tangible facts that indicate cops buy multi-million dollar systems with the primary concern being to hide from the media, then maybe I would consider changing my thoughts on it. But until that happens, I will continue to go with what my first hand experience has shown me is true.

> radio system...eventually.

I don't know what company representative you spoke with, but those that I have talked with say that the digital aspect of trunking works fine. Of course, they aren't going to say it is terrible, either. Bad for business. (grin)

If you mean the digital trunked system, it is expensive. I meant simple old Digital Voice Protection that has been around for years. It is cheap, effective, and works with existing systems. I will say it one more time...if secrecy was the concern of the cops, they would go DVP, not trunking. Period. It is literally hundreds of times cheaper than trunking.

If cops won't say they use pagers for some secret reason, and you aren't a cop, how do you know they use them that way? Again...a conspiracy so clever that there is no evidence of the conspiracy. Also, what is so "special" about an alpha-numeric pager? You can hardly find any pagers nowdays that AREN'T alpha-numeric.
>
> Sorry, it swings one way and one way only....Their Way.

I will say this again...one more time, so listen closely...scanner users (and the press) are waaaaaaay down at the bottom of the cop's worry list.
>
> It is not my part here to get into this venue...this is
> why trunked systems are so well-received by police depts

I am "the cops," so I know what I say about cops is true. You have obviously made up your mind about something and you are going to see just what you want to see in order to "confirm" your suspicions. I don't know if you are strictly a photo guy, or a reporter AND a photo guy, but I always thought that a reporter watched what went by in the world and reported what he saw. No personal opinions, no bias, no preconceived notions...just the facts. I see your writings about what cops think and what cops do, and I wonder if your news items are as inaccurate as your thoughts on cops. Nothing personal here. I don't know you from Adam, but this type of thing is why some people have such a hard time believing what they see/read in the media. You'll notice that I have not said one thing about the media, like "all reporters think this..." or "every news guy does that..." I am not a member of the media, so for me to try to tell the world what the media thinks and does would be silly. I have a friend that is the news director for a local radio station (he was Limbaugh's boss for a while in the 70s...) and he does not have a hard-on for the cops as you appear to have. A friend of mine in South Dakota was a big shot with the AP for years, and she has no animosity towards us either. So I can say that I have spoken about this type of thing with only 2 members of the media. That is not nearly enough to be considered a proper sampling for an accurate reading on how the media thinks on this subject. But so far, including the conversation you and I have been having, you are in the minority in my casual research.

Now, tell me how many cops YOU have talked to about it, and what are the percentages, etc.? Until then, your thoughts on this subject are your opinion. (Which your are entitled to have, just as I have my opinions. Only I have not stated my opinions...I have stated facts.)

Hey...at least we are keeping our differences civil...unlike the flamers that have attacked Bill Cheek! (grin)

Later,

Andy

Weeny washer? No shit, is that THAT what you are? Wow....I didn't
know.......... No wonder.........

>>It ain't a matter of ignoring them. They won't stop.

>Hmmm, we started this round?

Yes. Duff did. Without question or argument.

> Oh, yeah, I forgot. I posted your advertisment.

My press release? Yes, you did repost it. For that, I think you.
You DID do it, right? Yes, you sure did. IF there was anything wrong
with it.....and I don't think there was.....you DOUBLED it plus one.

> I wrote that joke FAQ of yours.

Why don't you tell me EXACTLY what was wrong with that FAQ?

> I called everyone "shit fer brains,"

No, WW, just you.

> and told them to "eat my shorts."

No. Just you and two or three others is all. Not everyone, Madame.

> You are so delusional that you
>are in serious need of counseling.

<giggle> Me? Ha ha ha ha. Me? heh heh heh. I'm not so deluded
that I use terms like "everyone" to mean two or four snotballs. I'm
not so deluded that I can't zero in on a single focus.

>Some times it's hard to tell the difference with you.

But it's not incumbent on you to do any "telling"......

>>and Alexander may be thinking things over after failing to practice
>>his preachments.

>What preachments are those, big shot?

You reposted my Press Release after saying it bothered you.

> Did the fact that I questioned your posting your lengthy
> press release set you off?

I -=wish=- you WOULD question it, WW. But you didn't question
anything. You came out on the prod....galloping to Duff's defense
with little boy Petey clinging to your pucker string.

Seriously, I wish you WOULD question........

> Is that all it takes? You little piss
>ant--you can dish it but you can't take it, eh?

How 'bout if I take you down and piss on you and make you at least
SMELL like a man? Would that be ok?

> I asked if you believed that it was appropriate...

Geezus......talk about delusions........ Why don't you re-read what
you said?

>Tell me Bluster Bill... Have you ever sold one of your famous CE232
>interfaces?

Hundreds....maybe a thousand. Why?

> No one ever talks about it; no one ever says that COMMTronics
>makes a fine product and offers superlative support. Why is that?

Huh? You must not read all the traffic, then. Or, you're stupid and
can't remember from one day to the next.

Are you not very intelligent? Can't you tell you're hearing a LOT of
sniveling from TWO such people?

Now consider the ultimate language used by Mackey and the fact that he
uses a FAKE reply-to address, are you STILL going to salute him?

>these messages have in common is that when someone says something that
>Cheek doesn't like, he kicks them off.

It says nothing of the sort. It says that I gave the heave-ho to Duff
and Mackey for behaving there the same way they are behaving here.
Obviously, you are condoning their behavior, though.

> What better way to keep people from
>poking holes into Cheek's view of the world than to stifle disent?

You don't understand and THEY understood even less. FidoNet forums
are moderated, and there are rules. Dissent is not allowed in MOST
forums....at least not the kind that goes on here. Arguing technology
is one thing. Flaming and debasing people is different. In any case,
yes, I do stifle that kind of dissent. The allowed topic of the
FidoNet SCANRADIO forum is .... now get this: SCANNERS and SCANNING.

Mackey and Duff repeatedly broke the rules. They got booted. So
what? The "what" is that you are encouraging them to degrade THIS
forum with their sniveling and moaning....added to your own.

Any time you want to get back to scanners and scanning or whatever the
topic is here, let me know, ok?

It ain't everyone. It's two dudes whose butts I kicked off of a
moderated forum for acting there like they are here. Another fellow
has a case of professional jealousy. And the fourth one is a
sicko-wacko on Prozac and Depo-Provera.

That four may have a few groupies, but that's about it. That same
gang will work over anyone who doesn't give 'em what they want.
Follow some of those threads back to the beginning and you'll see what
I mean.

They fancy themselves as some deity's gift to the newsgroup and think
I'm here to threaten 'em.

All's fine and dandy, actually. You get to see people's true colors.

I currently have a RS PRO-42 (please don't laugh) that has pooped out on me. One of the problems I was having when it was working was interference from other repeaters. Can anyone recommend what specifications I should look for when I purchase my new one so I don't have as much of a problem with intermod?

I was considering either the RS PRO-51 or the RS PRO-25. Are either of these good enough? The other question I had was...doesn't Uniden manufacture these for Radio Shack? If they don't, does anybody have recommendations on any Uniden or other brand scanners I might consider?

Thanks in advance!
Stuart

dstark@frontiernet.net (D Stark) wrote:

> You, too, Bill. Knock it off. Those of us who still
>have some respect for your technical talent are getting
>quite impatient with this garbage.

All right, you LISTEN to me, David. Five times now, I have popped onto this newsgroup......to stay...to be helpful and to learn. Each and every damn time, the sickos and slimeballs crawled out of the woodwork to have a go at me. And when they started in, YOU and many others remained silent. Why didn't you speak at the onset when the cause was self-evident?

By and large, there's always silence except for the cacaphony of howls from the few when I pop 'em back. But you understand this much: I do not play by your rules. Or Michael Alexander's. Or John Mackey's. Or Peter Boe's. There is ONE rule I hold inviolate....and that is that I will NEVER attack someone first. Second, yes. Not first. So if it doesn't happen first, it doesn't happen at all.

No, it is NOT incumbent on me to "go back where I came from" nor to do anything else about it, other than to dig in for the count. If you and the other good participants of this newsgroup care about the quality and content here, then focus on THE problem, not the response to THE problem. It simply would not exist if it didn't START in the first place. And you can TAKE it to the bank that I don't START it.

Now I am getting tired......literally SICK and tired... of having my business and livlihood thrown in my face as a form of leverage to force me to "behave" in some preconceived manner. Your last sentence above is a textbook example of what I am talking about. Talk about "impatient", man, THAT crap tickles my Impatient Meter to full scale.

My talent either IS or IS NOT. Period. It stands on its own merits, and it is not up for general barter. Much of me is FREE. Some of me comes at a price. Neither has anything to do as barter with my desire to participate.....to be helpful and to learn.....on forums like this one. There is no direct relationship to your subtle insinuation, aside from the self-evident fact that I am BOTH a hobbyist AND in "the business". I do not deny it; I do not hide it. It is a very unique position in which I live and play.

You heard of the old adage about mixing business with pleasure? Well, it's tough for me, pal. But it sure doesn't mean that I have to choose one or the other. And you are NOT going to make a choice for me, especially not at whim and fancy to suit your argumentive

purposes.

I am NOT going to have the "business side" leveraged against me, not come hell or high water. And YOU, my friend, are the first and foremost one in all of scannerland who I want to understand that. You see, in all cases, HOBBY comes first - business comes second. But when people like YOU stoop so miserably LOW as to leverage the secondary side against me, then we will face up .... and deal with it, right out in the open. Like HERE and now. Just like I was and am ready to deal with Moss, Duff, Mackey, Alexander, and anyone else who tried to play that grossly unfair and one-sided game on me.

You may as well be the first one to understand this one singularly vital aspect about me. When the leverage crap starts up, my business goes into the knapsack and out come teeth and claws. I will not be intimidated, threatened, coerced, or manipulated at ANY cost that you can reasonably afford, and none that I can imagine. The price to intimidate me is a lot more than YOU or anyone else can afford, let's put it that way. The price to get along with me is.....FREE. And it is time you and certain others got a solid grip on that. And when I said "get along with me", there are no other strings attached. Deal straight, and we'll get along.

And another thing..... you may as well learn on behalf of the silent majority.....is SPEAK FOR YOURSELF! Play the gang game on me and I'll slap your jowls into vibrating like a harpsichord. No if's, and's, or's, or but's.....

Running a close second to my loathing of leveraging business against me is the vain attempt to speak for others, to wit:

>.....Those of us who still have some respect for .....

WHO is this "us", David? Who empowered you to speak for them? Well, you just understand that I don't buy it, even if you do feel free to speak for others. I'm going to listen to YOU; not some hypothetical "them". You just speak your own mind and leave it to others to speak theirs, if they have one, and if they feel like it.

Now all that said and done.....you want a quality newsgroup? Don't lay its failure on me. And don't dictate terms to me. This is not a neighborhood where one person's fireworks can burn another's house down. You just live by your terms and leave me to live by mine. I cannot possibly deprive you of any rights and entitlements here in virtiuality, nor.....on a hobby level, can you deprive me of mine.

But, oh hell yes, you *can* get to me via my livlihood, huh? And when you can't get to me in any other manner, you go for the juglar. Guess what? I have a cast-iron juglar.....

So don't jump onto the business leverage bandwagon thinking that will intimidate me. It won't. There is absolutely nothing in or about you that can leverage me to ANY extent aside from one thing: - are you

ready? Grab your mouse and prepare to COPY and PASTE to a text file:

Straight, above the table, clear, well-focused, articulate discussion.

THAT and only THAT has a chance of getting through. I will always listen to and consider straight talk. Anything other than that is not even negotiable, much less "reasonable".

You want the problem solved? I'll help you solve it. But first, it has to be identified and laid out on the table. Just WHAT do you see as THE problem? Would it be any different if I were JUST a plain old hobbyist? Sure it would! Duff, Mackey, Alexander, and Boe would have to find another target for their aspirations. THAT would be THE difference, but the problem would still be there. It's ALWAYS there.

Go to ANY other newsgroup or network forum, and you will see personifications of Duff, Mackey, Alexander, and Boe......and an ebb or tide of a brouhaha. It ain't gonna change, David. Not the manner in which YOU attempted above. And maybe not in ANY manner, for all I know. Definitely not by the brand of cockalorum you brandished above.

But here's a deal for starters:

1. I don't leverage your business and talent against you. Don't you ever do it to me.

2. I don't speak for you or others; don't you speak for me or others.

3. I don't attack you; don't you attack me.

4. I don't change your ways; don't you change mine.

5. Get emotional over your wife; not me and/or mine. I will get emotional over my wife; not you and/or yours.

6. Eat off your own dinner plate and I'll eat off mine.

7. If, by some weird chance, one or the other of us happens to step on the other's toes, despite adherance to the above, then we sit down and straight-talk it out.....here, if appropriate, or by e-mail if more appropriate there.

Howzzat for starters?

>Why dont we see this from the airline pilots point of view. (As I am an airline pilot I guess this counts). During drparture, regardless of
weather is it VMC or IMC, I am relying on radio nav to assist me in any
type of operation. It is my PRIMARY sourse of situational awareness
information. + or - 10 degrees is unacceptable especially when the system
we are using is supposed to be only + or - 1 degree(for example). This is
because we are not the only one out there and we are required to be where
we are supposed to be to ensure separation between us and all of the
other aircraft using the same route. In reality, a scanner or something
usually will not screw things up. However lets say that your buddy brings
a lousy radio with a really noisy oscillator on the airplane which has a
harmonic right even with the Glideslope or Localizer freq. Bet you
wouldnt like the result.
As far as who lets you use radios on board the aircraft that is entirely
up to the captain. He has the authority to approve that on a case by case
basis.
As to your last comment.....The need for safety is EVER PRESENT and
should never be compromised no matter what the WX conditions are. You may
be a risk taker, but I am not.

(No flames...Just stressing MY point)

Hi all.

I have a 400 channel "Realistic" scanner that covers
25-520 and 760 to 1300 Mhz.

I head some time ago that it is possable to modify it to
get the gap from 520-760 and possably frequencies
below 25mhz.

No urgency, just interested if anyone knows how to do this,
or any other Mods. I'd like to try it some day.

Richard.

Derek,

I have the AT&T 9300 model. I can get about 1/4 mile out of it before it drops out too bad. At about 1/10 mile, it starts a few minor drop outs.

This radio is never intended to be exported to the United States. I have never even seen one myself. I cannot remember, but seems like the manufacturer felt that it would be too costly to block out the cellular reception to enable the radio to be marketed in the United States (but, I might be wrong). Anyway, it is not sold in the US so therefore the steps are not set up with the US band plans.

What I want to know is if anyone knows of a company which exports this scanner to the US?

How does it compare to the AOR8000? Which is sold in the US.

I grew up in Spokane, Washington and it IS a misdemeanor there. A snowball can do a lot of damage to a vehicle. When the snow is wet it's like throwing a ball of ice at a vehicle. Not only that, but it's a major distraction to the operator of the vehicle.

Oh damn! Now I'm starting to sound like my parents :(but I guess you grow more cautious in your old age.

John,

If you have not been on this newsgroup until a few days ago, then why is it you are raising such a fuss. It is apparent that you really don't have a clue do you.

Go away and leave me alone. You told me to back off. Get real.

Second, a couple different FCC licenses and a degree doesn't tell me anything. What I have seen of your
written language, you are unfocus and jump into a melee without knowledge of what is really the truth.

Third, I don't put much stock into the government, as with many people don't, and I can't see how a license
makes you an expert. What I have seen you have not here or on FIDO display once ounce of know-how
in the realm of the scanner world.

Show us what you know about scanners, then earn respect. Loud-mouthing is not the way to do it.
Joseph

BAYCITVIDGRP wrote:

> Sorry, it swings one way and one way only....Their Way.

Try swapping that around and see if it works for you ..

"Great, is swings one way and one way only....My way."

You might be selling yourself a little short there. "They"
need you as much as "You" need them.

> It is not my part here to get into this venue...this is
> why trunked systems are so well-received by police depts
> in that they keep the press away....longer than before.

There are much more cost effective ways of keeping their
traffic 10-35. From what I understand, trunking is a more
cost-effective way of operating city communications.
It's by NO MEANS 10-35.

> That is all I wanted to illustrate.....

Reminds me of an old saying ...

"You can collect more flies with honey .."

Now I'm not a member of the press so my paycheck doesn't hang on
getting information from the local PD/FD, but being a scanner
hobbiest I've found it useful to befriend local PD/FD people.
It's soooo much easier to get information from someone when
they are comfortable with you.

Hi,

Bucks County PA will be migrating to a trunking system soon. I hear plans are to trunk their existing 501 Mhz frequencies. I am not sure of the timeframes for implementation nor the system/format that will be used.

I believe that this is the greatest newsgroup on the net. Many of the other newsgroups are very confining in that they try to stick to the subject at hand. This newsgoup has transcended that linear mode of thinking and discussions such as the following are prevalent: the sexual practices and fetishes of the participants, advertisements for products, the etiquette and history of obscure nets run by a dog (FIDO?), the latest in profanity and coloquial english, and the mental health history and medication treatments of the participants. My favorite so far has been the 7 rules for daily living in the "What's the Big Deal Thread".

I, quite frankly, had gotten rather tired of the endless repetition of the scanner and frequencies threads and this new approach has certainly been a breath of fresh air. I think that I will unsubscribe to all of the other newsgroups as all that I need to learn is here.

Thanks and keep up the good work. I would like to thank each of you personnally who have contributed to these informative discussions, but I am sure you know who you are and are rather proud of the contributions that you have made.
Opinions Expresses Are Entirely My Own.

Well folks...I've been quiet for the past 2 days since Bill and I had
taken it to e-mail.
I proposed that we both go back to our corners and lay low for a
while... Billy to Fido and me here.
Thats not good enough for old Willy's ego...too sore on the pride
so here we go again....
ROUND 2 !!! (I'm told Billy got a 9 count in round 1 !)

Lets get back to unfinished business...

For starters... You never did answer me about the "Engineer"
question. All you did was dance for about 4 replies then dropped
it like a hot potato.
So... Do you have a university engineering degree ?
Yes or no ?

Next, How about proving that load of bunk about being an amateur
radio instructor...I find this extremely funny since you don't
even hold a licence yourself. Prove it by providing a list
of your succesful students by callsign !

We'll pace ourselves and see what we come up with for this round instead
of giving ol' Billy a chance to weave another bunch of lies around it
to attempt to divert and dodge the questions.

So Billy...give it your best shot !

More to come,

Hugh Duff VA3TO Toronto

Go away PjB. You forgot who starts the flamming each time Bill makes a post.

3727. New BC wide emergency radio system

Newsgroup: rec.radio.scanner
Date: 1996-07-24 00:00:00 UTC
From: Jay MacNEILL <jmacneil@direct.ca>
Message-ID: <31F68F55.3670@direct.ca>
Source record: 228796

Does Anyone out there in BC can have any idea of what radio frequencies
are going to be used for the New emergency Radio system for police/fire/
Ambulance services, in southwestern B.C. ?

As anounced by the AG,the system is to cover an area from Boston Bar
to Pemberton---Sechelt--Vancouver-- down to the US/Cana Border.

Any Ideas?
800Mhz Trunking?,or current GVRD 407---411 Mhz freqs?

With all the mountans around these areas that the system is suppose
to cover, I doubt 800 mhz Trunking is going to be used??????

Any Guesses???

Please reply to newsgroup. Thanks

Footnote: System is not going to be operational until late 1998.

3728. Olympic Freqs Wanted

Howdy:

I'm looking for anyone who has any good Olympic Freqs ... I live in one of the Venue Site cities, and was looking for something to listen to, besides the obvious - local and state PD type stuff ...

Motorola put in a nice trunked type system for teh olympics .. any ideas on this one? It may be one of those digital systems, though.

Any good Federal stuff, too? USMS and FBI are quite active. .. any others?

Thanks in advance - either post publicly or mail me!

John

Its true. Ol' "I was born in the kitchen" billy is not at all above
biting the hand that feeds him. In a recent post he refered to me as one
of those "dumb-ass hobbyists". Now lets look at that for a second.
Who is Mr. Cheeks trying to market his gadget to? Engineers? Programers?
Professionals? Rocket scientists?
No. The market that_ might_ be interested in his item is....thats
right.....the "dumb-ass hobbyist"!
And he goes on and on in that over-wrought, pseudo down-home, howdy-doody
meets Will Rogers style of his about how persecuted he is here.
Well......lets just call it rectal-cranial inversion.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated June 24, 1996

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC testing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 4 (Sunday) - Peotone, IL - Hamfesters Radio Club 62nd annual Hamfest and Computer Festival. Will County Fairgrounds, Peotone, IL I-57 Exit 327 East 6a.m. - 3 p.m. Air conditioned main exhibition hall opens 8 a.m. Lots of covered flea marked space, acres of free parking. Grand prize $500, 2nd Prize $300, $100 for 3rd Advance double-stub tickets $4.00, $5.00 at gate for more info e-mail Jim Riley KB9CYL at rileytrix@aol.com

August 10 (Saturday) - Western Illinois ARC Swapfest, Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. 4.5 miles north of downtown Quincy with easy access from US Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at the gate, $2.50 in advance, per person. ARRL VEC testing, all classes, is at 12:30 p.m. Reservations go to NA9Q at

(217)224-8526. Indoor flea market is $5.00 per 5-ft table. Outdoor tailgating space is free. Talk-in is on 147.03. Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Ham-fest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Build-ings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

I would like to upgrade from my BC200XLT, which has been a great scanner. I'd like to know of any suggestions anyone may have. I'd like to be able to control the scanner with my computer, which is a Mac. I know that most of the scanning controllers are for DOS/Wintel OS's, but if anyone would post any advantages/disadvantages I'd be grateful.

john

I need some help with an antenna choice. I was thinking of replacing my PRO2004 antenna with a Grove 46" universal whip or a 24" magnetic mount mobile antenna. I live in a northwest suburb of Chicago An outside antenna is out of the question. I enjoy monitoring air, ham, cell and phone bands. Your help and ideas are appreciated.
thanks,

Dennis

Can anyone direct me to an inexpensive source for a BC3000
manual ? I've _misplaced_ mine and don't know enough
Spanish to read the other one. Heck, I'll even trade my
Spanish manual for an English one. Any takers ?

Thanks in advance - Ron

3753. PD (POCSAG paging Decoder) Version 2.02

Newsgroup: rec.radio.scanner
Date: 1996-07-24 00:00:00 UTC
From: Pete Baston <pete@bearnet.demon.co.uk>
Message-ID: <ow$2gJAmMm9xEwzJ@bearnet.demon.co.uk>
Source record: 228822
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,alt.radio.scanner

```
PD (POCSAG Decoder) Version 2.02
--------------------------------

**** Announcing the release of PD version 2.02 ****

PD is an MS-DOS program for decoding POCSAG paging transmissions on an IBM
PC or equivalent, 80286 processor or later.

PD requires a simple interface between the audio output of a scanner or
receiver and a COM port on the PC. This is described in the documentation
file.

VERSION 2.02 July 1996

* Fixed problem causing poor decoding when running on some motherboards -
particularly Pentium systems.
* Fixed problem with buffer overflow, caused by receiving long pages -
this could cause strange behaviour or exit to DOS.
* Fixed bug whereby PAUSE did not work properly (introduced in 2.01)

PD is distributed as shareware. The shareware version has a 5 - minute
timeout and does not log to disk, or output messages serially. Upgrade to
the full version is by a key file available from the author on
registration, which costs 20 Pounds Sterling.

Registered users of PD may unlock version 2.02 using their existing
.KEY file.

PD 2.02 may be downloaded from the following sites:-

ftp://ftp.demon.co.uk/pub/ham/scanners/pd-202.zip

http://www.keplens.co.uk/pager/

For any info email Pete Baston <pete@bearnet.demon.co.uk>

: frequency?
: ... /\
: ... /~~_ al.stern@mit.com
: > Satellite Beach Florida

Hi Al,

Yeah, from what I've seen, the only use for CTCSS options on scanners
is to limit the receptions. It's come in handy a few times, where I was on
the outskirts of one town, picking up a local police, and a few miles down
the road was another police department broadcasting on the same frequency.
Since they used different PL's, I just turned my CTCSS squelch on, set it
to the PD PL I wanted to listen to, and bamm no more faded in the background
noise from the other PD.

Now, in transceivers, CTCSS is much more important. A PL is sometimes
required to access private repeaters, or what not.

My $.02

Keith

3761. PC Sound Card & Scanner Audio

Newsgroup: rec.radio.scanner
Date: 1996-07-24 00:00:00 UTC
From: James Robinton <robinton>
Message-ID: <4t5k2q$m4n@news.sanders.lockheed.com>
Source record: 228830

I had an idea for connecting a scanner to the sound card of a PC. There are a number of things I think this could accomplish even if the scanner was no controlled by the PC and if it was all the better. I realize some things might require offline analysis by the software looking over a recording file while others might be done real time. Has anyone seen something like this out there. (If not maybe this will start some discussion).

1) PC could act as VOX recorder, so later you can come back and listen to only the highlights, recorded audio on the disk. If frequency knowledgable they could be separated into different audio streams, hits could be accumulated etc.

2) PC could determine CTCSS of incoming audio and display CTCSS freq or use freq
as lookup to indicate known users of RF frequency. It may even be possible in real time to filter and alarm based on CTCSS that you want brought to your attention.

3) PC could decode touch tones, digital data, and other pager tones converting them to display (numbers or pager addresses).
Additionally (for those who have a way to get something on the air...like calling your own pager or using a hand held radio/your own cordless phone) a lookup table could be used to:
o Start programs
o Perform other control functions for the scanner itself.
o drive other PC driven devices (X10, modems etc).

Any other thoughts out there ??

/Jim

3762. Garage door openers, radio ?

Then why not crawl back under your rock and leave it alone. Or better yet, if you have something to contribute to the newsgroup why not do so. You sure come on strong for someone who has only been on the newagroup for only two days.

>Second, YOu have obviously not dealth with Bill Cheeks very much.

Who IS this Bill Cheeks????? The person you might be refering to has a name, it is Bill CHEEK. As he is fond of saying, it is not Cheeks, but Cheek (only one, you pick which one).

>Third, I have a couple different FCC licenses & a Master's in Communications
>so don't try to tell me I don't know anything. What are your
>credentials?

Credentials are only as good as the work that comes from them. Bill has published several books (two of which I do own) and publishes a well received newsletter that details additional modifications that can be made to Realistic scanners. Bill's company, Commtronics, also manafactures one of a very few excellent interfaces for the Realistic PRO2004,5,6 scanners.

With his thoughtful laid back style of writing instructions, a friend of mine and I were able to install hei HB-232 interface into my 2006. Yes, I will agree I did not do it alone. I needed help with the install. I am partially blind and do not solder small parts, so I enlisted the help of a friend. BUT without Bill's well thought out manual it would have not gotten done.

Bill perfect, NOPE (he will admit that too I'm sure), but at this point in time I see nothing constructive from you so it is not possible to judge your credentials with nothing to go on.

True I will admit I am not a professional in this industry, but I do consider myself to be as close to a professional scanner listener as one can get, and I do have the local media contacts that if I were to allow them to be bothered with the questions would agree to this fact.

I for one consider myself luck to be able to say that I have met Bill in person and I do consider him a friend. We have exchanged many e-mail messages over the years and I have found him to be one of the most helpful and knowlegable people in the hobby. His only fault is also his greatest asset. Bill is not afraid to speak his mind and is

not one to back down from anyone, period!!!

>then you could set just the ones you want to hear to Memory Scan Memory
>(p44 in the manual). Toggle the memories on and off as control signals
>move.

Yes, but that's a major pain since the trick to monitoring trunked systems
is to exclude the few (the data channels) and listen to the many. The
gymnastics you have to go through for programmed memory scan seem
efficient only when you wish to select a few desired channels from the whole
bunch.

Also, this radio is oddly schizophrenic with regard to selecting modulation
and step size in search mode. True, the desired modulation is stored
in the memory channels which hold the search limits (e.g. 118 and 136 MHz
in AM mode). But if NFM is the active VFO mode when you start a limit
search, it will ignore the AM mode settings you stored with those limits.

Wouldn't it be neat to have a scanner with the size and performance of
this radio, and the user interface of the R-1 (with more memories)?

(Some people may not realize how tiny this really is .... do you know those
large-screen Motorola Advisor alphanumeric pagers? That's what we're
talking about here).

Or through the Optoelectronics interfaces OS/456 or OS/525 for
Realistic scanners.

Yes if you have multiple users sharing a single frequency and you
would like to monitor only one agency, CTCSS or DCS is a must!

Here here! One of the better explanations of underlying rationale
of trunked systems! Way to go Neil!
I second all Neil has to say on this subject.

There were a great number of local municipalities in and around Dallas/
Fort Worth in past years who had alocations for only one or two
frequencies in a mix of VHF low-band (30-50), VHF hi-band (150-160) and
UHF (450-512) frequencies - and who have now converted to Trunked systems,
and in a lot of cases nearby small, cities went in together on a system
because it was impossible to obtain additional, clear VHF hi-band or
UHF frequencies (activity on low band here is alsmost non-existant).

Trunking does make very good, efficient use of spectrum. I am looking forward
to trunking in the VHF and UHF areas - I like the propagation characteristics
at 150 MHz for county-wide coverage and UHF works well for building penetration
(as does 800) but UHF for some reason seems a little 'friendlier'

propagation-wise in the city plus offers a little less free-space propagation loss and diffracts a little better into low lying areas (covering them better).

Regards, Jim

Careful, Shaggy.

I, too, appreciate what Cheek has done for the hobby. But after stating such publicly, I am now inundated with private EMail messages threatening me, my family, and inquiring as to my possible canine heritage.

Screw the morons, Shaggy. They prove my assertion that it takes absolutely no I.Q. test to access the Internet. I doubt they lack the intelligence to even know how to program their scanners, let alone improve/modify them with any of Cheek's excellent enhancements.

I have a couple of amusing things to mention.

Firstly while I was bussy with some DIY at home, I had my scanner
on listening to a woman on a cordless telephone set,
she had been talking to her friend for at least an hour.
Then I herd her tell her friend that she would not come and
visit her for a while, because of the traveling costs.

(Think about this one. If her friend is far enough away to
worry about the travel costs, then how much has an hour long
phone call over this distance just cost her. I suppose this
is femanine logic at its best).

Another thing I found amusing was a few years ago when I
tuned into the Red Arrows display frequency, while they
were putting on a display at the Biggin Hill Air Fair.

Most of the instructions would be short and sharp.

Things like
LEFT
BREAK
CLIMB
etc. etc.
Then all of a sudden I would hear.
"WWWHOOOOOPPEEEEEEEEEEEE!!!!!!!!!"

I suppose those display teams must have some fun.

Bye Bye now.

Richard.

G'day Dave, How would you be?

When I lived in Auckland, There were about 6 - 8 freques in regular use. _ I seem to remember that most of the NZ police were in the 70 - 72 mhz segment. - I converted an old Pye (NZ) Galaxie to the freqs - somewhare I still have all the xtals, Lord knows where they are now though. - I had a quick search through some old papers & came across the Galaxie Circuit, but I didn't make a note of the freqs on the papers - sorry...

SIB and Armed Offenders Squad used the same band but simplex low power.

This info is 18 years old, so they could be anyware!! Happy hunting.

Love to Aeteoroa - I miss the Long White Cloud.....

In my book Mr PjB, if mentioning a product during the course of normal communications (usually when someone asks for it) is all that bad then It's obvious that you have nothing better to do than to nit-pic and CONTINUE the problem.

It seems to me that FORGERY (and that's what I wrote about in my original post) is much more severe a problem than posting some information about a product.

Now, I've been on these groups off and on for the past two years and have yet to receive an instruction manual on what can get posted where. This group STILL remains one of the few groups whos topic stays on track, whether Bill Cheek posts an ambiguous ad or not, it's still on topic. It usually after that fact that (By you and a few other self-appointed usenet-police) more trouble starts. If you would leave it alone there would OBVIOUSLY be less OFF-TOPIC messages here (like this reply to you) that people have to wade through. 2 or 3 ad type posts a month by a man is CONSIDERABLY less than whats going on now. The man has a RIGHT to post anything he wants in this and other groups andyou of all people should know that nothing you say or do can change that.

With that I will NOT reply publicly to any more of this trash. E-Mail me if you wish to intellegently discuss this further.

Shaggy

: frequency, and a ramp frequency. How do these interact? For example,
: ground would tell the plane to taxi via various taxiways, then to
: "monitor tower". However, I did not hear these planes call the tower to
: let them know they were ready.

: Also, I am interested in Pittsburgh airport, where I live. I have a list
: which gives 3 tower frequencies, 4 departure frequencies, 2 approach, 1
: clearance, 2 ground control, and a ramp master. What are all of these used
: for? I am sure there are others in this newsgroup as confused as I am.

John,

It's funny you mention that. I've just been recently getting more involved with monitoring Pittsburgh International. I'm interested in the responses to your questions as well. Usually, after I hear a plane taxi, they say, "Call the tower on 119.1". Once I switch to 119.1, I usually hear the same plane... Hopefully someone can provide a radio flowchart of sorts for takeoff and landing. I need a better antenna and maybe a signal preamp as picking up the airport is rough. Although at night, I get clearer signals. I'm about 22 miles northwest of the airport.

I'd be interested in seeing what freq's you have too.

Keith

Hi Guys,

Here's the poop. The transmitters on aircraft and ground facilities are low power and designed to work line-of-sight, which is pretty far to an aircraft in flight. For that reason, it is difficult to receive the ground station on your scanner if you are more than a few miles away.

A departing or arriving aircraft usually starts by dialing in ATIS. This is an on-airport automated recording that is usually updated hourly or whenever conditions dictate. It gives instructions for arriving and departing aircraft. In addition, it provides local conditions at the airport. It will usually be referred to as "information XXXXX" where XXXXX is a phonetic letter from 'alpha' to 'zulu'. The departing pilot will then contact clearance delivery if required (usually only at larger airports), identify the A/C (Cessna 12345, for instance) and indicate his intentions (departure direction, altitude, etc.) and that he has "information XXXXX". If there is no clearance delivery frequency, then the above is done when contacting ground control. Ground control will give the clearance for the pilot to begin taxing to the departure end of the runway or to the intersection of a taxiway and runway. Further clearance is given when the runway is clear. The plane is taxied to a run up area at the end of the runway and the pre-departure checklist is completed. When the run up is finished, the pilot informs ground control and is given a clearance to

taxi to the runway and contact the tower on the tower freq. The tower will then clear the A/C for take-off. If the airport is located in class B or C airspace, the tower will hand off the A/C to approach/departure control.

If the A/C is arriving, the procedure is pretty much reversed. Of course, there are other things that can and do occur. For instance, you might hear the pilot ask the tower or app/dep control to activate or cancel a flight plan.

In route, there are frequencies for Flight Watch (122.00) for in-route weather advisories, Guard (121.50) for emergencies and emergency locator transmitters, also referred to as an E.L.T. An easy way to get the frequencies for your area is to go the local flight school and see if they will give you an old "sectional" for your area. This is the pilot's map while flying and has a tremendous amount of information on it. The sectional usually expires after about six months, so there are usually a few old ones lying around. Also, if you like, a new one costs around 7 dollars.

I think that's about it for now. If you need clarification, drop me a line.

Finally, the commercial comes along. If you are interested in flying, contact your local Civil Air Patrol unit. You have the opportunity to fly as part of a Search and Rescue aircrew and put your communication skills to work. You don't have to be a pilot, just be 12 years or older (16 to receive flying lessons from CAP and 18 to fly search and rescue missions. If you like to keep your feet on the ground, the aircrews are work with ground teams that perform the actual rescue functions when the missing aircraft or person is located from the air. By the way, in most areas, CAP does their mission communications on 148.150 and 148.125. For more info on CAP and how to contact a local unit, look at the National CAP web page at http://www.cap.af.mil

re: Fixed Service bands

They're for communication between fixed (i.e., base) stations and are used for radio teletype, weather fax, etc. Fixed service bands are interspersed throughout the frequencies 1.7-30 MHz (see my web page for a list). They're not used as much these days with the advent of satellites and so on.

<snip>

>the coverage stinks, people lack respect and confidence in their local
>police/fire depts becuase they do not see them doing anything.

<snip>

People lack confidence in their PD/FD because the media isn't providing proper coverage of incidents??? Sounds like they should have a lack of confidence in the MEDIA because the media can't cover incidents properly.

Also, where did you conduct the poll that indicates people think less of the PD/FD when the media doesn't cover various incidents? What was the total number of people you spoke with??? What percentage said they lacked respect??? Was is a proper sampling of the entire population in question??? What is the margin of error? Did you do it by phone, letter, or in person? I am merely curious where you got the fact that because people don't see the media doing their job properly, that they begin to dislike the PD/FD.

I'm not a professional pollster, but I do know that you must have input from at least several hundred people, and the questions must be asked in such a way as to not generate any bias.

Just curious,

Andy

3797. Introduction to Scanning

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

This introduction is intended for people new to the scanning hobby and is oriented to scanning in the USA. It tells where you can buy your first scanner, what features it should have, where to get it repaired if required, how to get frequency information, and mentions a few scanner clubs worth joining.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by what they overhear on their radios. Police cars, fire engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air

Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer to replace the stock antenna with an Icom FA-1433B dual band flex antenna which is thin and very flexible while providing better performance than a stock antenna.

Although it is small and somewhat tolerant of physical abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and

the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The 1996 editions contain selected business listings, too, although callsigns are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing),

and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club(TSC)isthenameofabimonthlymagazine | published by Les Mattson. It is a successor to the | Northeast Scanning News and is the official publication of | The Scanner Club, a not-for-profit club organization. |

TSC's main strength is local frequency information, | including CTCSS codes. Sample issues are $4 each. A | yearly membership costs $24.95 and includes 6 issues. | Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 | for more information. |

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify | antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. The RCMA's monthly Scanner Journal is no longer being published. The RCMA web page is at http://comp.uark.edu/~plaws/rcma/. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by- |
group/rec.radio.scanner. The author writes a monthly |
"Scanner Equipment" column for Monitoring Times magazine, |
published by Grove Enterprises, but views expressed in this |
article are his own.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners. *

Books

The most convenient source of fire and police frequencies
is the Police Call, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and
larger book stores for under $13. Police Call is basically
a computer printout of FCC license information in the fire,
police, local government, and conservation services in two
lists: by licensee name within state, and by frequency.
Later editions have included a few pages of local airport
and nonsensitive federal government frequencies. The 1996
edition contains selected business frequencies, too, but
callsigns are listed only for local government and public
safety licensees.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed

full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the world's largest scanning club, the Radio Communications Monitoring Association (RCMA). Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify | antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350

Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined

the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. The RCMA Scanner Journal is no longer being published. The RCMA electronic mail address is RCMAHQ@GEnie.com.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542
Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was

on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping

transmissions, scanner enthusiasts can unearth new
information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 60 old and new scanner radios and monitor receivers. Other topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for | Monitoring Times magazine, published by Grove Enterprises, | but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Grove Enterprises (Brasstown, NC) and Radio Shack repair scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the
scanner or require more detailed information, like series or
parallel resonance, load capacitance, etc.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews of these scanner models
in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT

Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jul 1996 - Uniden/Bearcat BCT-10 mobile

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this $2.00.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but

too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal

frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are

backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems.

See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage

in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except

aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300

channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size.

Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2040: 1996 vintage 100 channel mobile made by Uniden | with fairly good performance. Descendent of the BC760XLT | but no CTCSS option available. Ten banks of ten channels. | Scans memory at about 34 channels/sec. Service search, | direct search, and band search. Preset search limits by | band and user cannot program the search limits. Image | rejection is minimal, as one would expect from a scanner | with IFs of 10.85 and 0.450 MHz. 10 Monitor memory | channels. Can lock out up to 20 channels from a search. |

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider

frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. Very good portable made by for Radio | Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1984 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner

crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify | antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio

operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $25.95 for standard or $29.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (708)554-3839 6-10 PM central time. For a brochure, send SASE.

After reading the above post by Bill Cheek, I would be amazed if he has any
Degree from any University whatsoever. Anyone with an ounce of education
would not resort to name calling and the behavior that you exhibit here in
this forum. If Bill, you in fact have a degree, please send me the name of
the University from which it was awarded. But as I said, I would really be
amazed if you had a B.S., M.S, M.E., or above.

Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,alt.radio.scanner

```
PD (POCSAG Decoder) Version 2.02
--------------------------------

**** Announcing the release of PD version 2.02 ****

PD is an MS-DOS program for decoding POCSAG paging transmissions on an IBM
PC or equivalent, 80286 processor or later.

PD requires a simple interface between the audio output of a scanner or
receiver and a COM port on the PC. This is described in the documentation
file.

VERSION 2.02 July 1996

* Fixed problem causing poor decoding when running on some motherboards -
particularly Pentium systems.
* Fixed problem with buffer overflow, caused by receiving long pages -
this could cause strange behaviour or exit to DOS.
* Fixed bug whereby PAUSE did not work properly (introduced in 2.01)

PD is distributed as shareware. The shareware version has a 5 - minute
timeout and does not log to disk, or output messages serially. Upgrade to
the full version is by a key file available from the author on
registration, which costs 20 Pounds Sterling.

Registered users of PD may unlock version 2.02 using their existing
.KEY file.

PD 2.02 may be downloaded from the following sites:-

ftp://ftp.demon.co.uk/pub/ham/scanners/pd-202.zip

http://www.keplens.co.uk/pager/

For any info email Pete Baston <pete@bearnet.demon.co.uk>

[stuff snipped]

Okay, it's obvious where you stand, but you are wrong in asserting that Cheek provides a great deal of assistance here and lots of people slam him for no reason (without providing anything useful in return). I won't argue the point with you, but prove me wrong and start posting useful info yourself. Otherwise it will be easy to conclude that the people who like reading Cheek's posts--filled with references to his various orifices and underwear--are unable to do anything but kiss up.

This message is off line of the newsgroup for the simple reason that if I post it, Cheek will do his frothing at the mouth number on it. You'll notice that he responds to every single message about him, good or bad. Further, you'll notice that even when someone says something kind about him that he is not beyond turning on them like the mad dog that he is.

You seem to be rather neatly ignoring the fact that Mr. Cheeks took the first step onto ground where questions of ethics and morals come into play (and I'm not considering name calling a moral/ethical problem) by publicly, in this forum, publishing an amended form of Mackeys address, threatened him, and stated that the federal govt. was questioning him (Cheeks) about his knowledge of Mackey.
And this is by _no_ means the first time that Mr. Cheeks has used such underhanded tactics in an attempt to intimidate his critics.
The last time Cheeks came crusading into this group to 'hose us down' (his words) he sent me several emails threatening me with violence (I still have them). He concocted out of whole cloth a tale of his getting sexually explicit email from someone on AOL, and then wrote me stating that the AOL brass had listened to his tale and decided to let him take matters into his own hands by giving him _ my_ identity! Lying poses no problem for Mr.Cheeks.
I have an abundence of material from his ScanRadio forum that amply demonstrates this, and will gladly post it to the group.

Dennis,

Coincidentally, a friend of mine and I were discussing the same thing. I was interested in getting his opinion about whether I should raise an outside antenna. I live in the southwest suburbs of Chicago. I can raise an outdoor antenna, but after talking to him, I think I'll go with his recommendation:

Before you try either antenna, buy the Radio shack telescopic whip with either bnc or angled motorola connection. It costs about ten bucks. Try it for a while. I think you'll find this antenna will do the tricks and is cheaper than either antenna you mentioned. Not a stockholder in the Ratshak, but once in a great while they come come up with some good products. BTW, it's center-loaded. Any questions, please feel free to e-mail me.

>guesses why, and the first two don't count.
>

The thing is, it's not. The 3000xlt gets fine Cell images, if that is
what you want. The 2500xlt goes for $200-$250 used. Do a search on
Dejanews, http://www.dejanews.com/ for 2500xlt. The 2500xlt gets a lot
more birdies, worse reception, etc than the 3000, by all accounts.

Plus when you have computer controllable, continous coverage with
cellular, 500 channel ar 2700s going for $210.... NEW.... $250 for a
2500xlt starts to sound generous.

You get the picture.

Hello out there
Anyone out there looking to trade a working scanner for a 220MHz Handi Talkie?
It's a Icom 3AT in nice shape with 16 DTMF keypad and PL (switchable) and nicad pack with new batteries with charger and AA battery pack and rubber duck antenna.

What do you have?

Please e-mail me direct
Thanks, Mark

last changed June 3, 1996

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

archive on the official USENET FAQ library |
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. |
The author writes a monthly "Scanner Equipment" column for |
Monitoring Times magazine, published by Grove Enterprises, |
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges. The phone number for repair is also (800)297-1023.

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the

frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

OK- you all have computers, or access to one.

So it's safe to assume that a large percentage of you keep the list of freqs programmed into your scanners as a computer file.

How about posting them?.. Even if freqs for your area havent been asked for, what with news archives like Dejanews, it could be a big help to lots of people out there. I go to dejanews first before asking anything on USENET. (and everyone should!) If two people post from the same area, you can compare notes.

If you don't have the list as a text file, most database programs should be able to export as tab-delimited text.

I have a partial program list for myself. I've only had my 200ch scanner a couple months so I havent quite laid down anything close to that many channels I want to hear a lot. So far I just have mostly been listening to the SDPD trunk and that keeps me busy.

Here's the beginning of my program. I'm located in the Clairemont, San Diego, CA area.
I'd be very interested in any san diegan's programs. I heard a rumor this trunk cycles downwards. Should I have the freqs programmed in highest-lowest instead of how I have them?

Source record: 228893
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Finally, I lowered the price for y'all!
$500, that's right, only $500 for the famous DRAKE SW-8!!!!!!
I need to sell it soon (I'm going to miss it dearly though) and
there's nothing wrong with it. It's got a great modification
(done by pros at the Drake factory) which imporves whip antenna
dramatically.
Shipped to your door for $500!
In original box, with A.C. adaptor and manuals,
Email me soon, send your phone #.
Matt.

The local city dispacher here in Ames Iowa was informing the officer
on the nature of the call he was en route to.

"The gentleman claims that his neighbors are beaming hypnotic messages
throught the wall of their apartment into his apartment."

The officer either missed the first transmission or thought it funny
because he asked her to repeat it again.

This was heard the first week I had my scanner. My wife could not
believe it :)

>->->Look at your spectrum chart for a minute. Now do you understand what
>->->"Fixed" means?

No,

My spectrum chart does not elaborate on any terminology used, therefore the ambiguous term "Fixed Service", does not tell me jack s**t as compared to what "Maritime Mobile", "CW, Amateur, 80 meters", "Space Research", "Petroleum Industry" tells me.

Now again, I ask, What does the term "Fixed Service", in regards to these small ranges of frequencies mean? Who uses them?, and for what purpose?.

Are they used for Industrial?, maybe TV stations?, Personal communications?, Experimental? ect.

I've scanned these ranges in and around the Atlanta Ga area and have yet to pick anything up on them.

Me too. My range really sucks though. I even have an Austin Condor,
and on the 8th floor of my building. I can only get people about 2
floors up and 2 floors down. We have so much chicken wire in the
walls, regular cordless phone only have a range of about 40 feet
outside of your room. Even a 900 MHz phone can only go down about 6
floors before the chicken wire and plaster starts blocking eveything.

Source record: 228971

The noise generated by a scanner is not the same as generated by a computer. A scanner on a single frequency puts leaks its mixer frequencies on single (coherent) frequencies. Computer noise is more broadband. The data and address lines have the POTENTIAL to move based on the clock. However, it is unlikely they ALL will move every clock cycle. For example, suppose a memory fetch brought back all zeros. Then clearly those lines didn't move.

This does not justify computers as sources of friendly noise. The argument is the noise sources are not comparable.

Now to further muck things up, there was a telephone answering machine made a few years back that had two interesting problems: a cheap power supply and a cheap clock oscillator. As the speaker was driven, the power supply would be modulated (poor load regulation) and in turn would modulate the clock oscillator (poor line regulation) producing a FM signal. I didn't see this myself and thus it may be urban legend, but the arguments are plausible. Hence who is to say what is a transmitter?

There are only 16 codes you can feed the DS8000, but there are more than
16 PL tones. Thus I suspect this wouldn't work. Also, you would want
to set the PL for each channel individually. This would require a
memory allocation change or the PL would have to be the last letter or
two in the name. Then there would have to be some way to read the name
and get the data to the PL board. That would be a stretch. Now if you
wanted to let just one PL (out of 16) tone get through, that would
be possible. But who would buy it?

Oh yeah, in my opinion!

SL> Subject: Re: Pro-2036
SL> I just purchased this scanner from Radio Shack for $199.95. I am
SL> pleased so far with it. It is identical to the Uniden 890xlt. I like it
SL> because it has the CTCSS option.

Hi Stoney:
I understand what the CTCSS option does, but I have always
wondered what advantage it is to the hobbiest scanner. Is it
an advantage to limit the receptions you hear on a given
frequency?

3836. Compiled Olympic Frequencies

Newsgroup: rec.radio.scanner
Date: 1996-07-24 00:00:00 UTC
From: jrq@ix.netcom.com
Message-ID: <4t3sr1$f66@dfw-ixnews10.ix.netcom.com>
Source record: 228977

Well, for folks in the Atlanta area it's not been a total loss. I'm sure there's alot going on that's encrypted, but there's still plenty to hear. I've slapped these all together from lists I've seen here, published lists, and from stuff I've found on my own.

My hearty thanks to everyone who posted and contributed.

Citius, Altius, Fortius, y'all.

Jay Q.

-- cut here --

FYI, The torch passed thru Michigan yesterday and today. Following freqs were in use:

464.500 (pretty sure of 131.8 PL)
464.625 (possibly DPL 051)
468.375 (unknown PL/DPL)

The primary ACOG trunk currently includes:

935.3875 .4000 .4125 .4250
936.3875 .4000 .4125 .4250
937.3875 .4000 .4125 .4250
938.4500 .4625 .4750 .4875
939.3875 .4000 .4125 .4250 plus 938.9250 and 939.8875

A commercial trunk on 936.4375, 937.4375 and 938.5000 carries ACOG related communications besides regular traffic and may be part of the primary trunk. 939.4500 and 939.9000 also fit in here somewhere.

ACOG also has a transportation trunk on 938.3875 .4000 .4125 .4250 & .4375.

Coca Cola Olympic City is using 937.6375 & .6500, and satellite video techs were heard on 939.9750.

Police and Fire services are on the primary Atlanta trunk:

856.4625 .4875 (-) inactive
858.2375 .4375p .7625c .9375p (p) phone patch
859.2375c .4375 .4625 .7625- .9375 (c) control channels
860.2375- .4375 .7625 .9375

141.1 Transit Moving the atheletes on busses, units in 400
141.1 MHz One of 4 frequencies listed in Monitoring Times a few months back as being US Government "Special Event
Frequencies."

The others listed were: 139.275, 140.2, and 140.325 MHz.

OLYMPIC VILLAGE SECURITY (All repeated except CH 3)

140.425 "Fence Ops" Used in regard to access through the fence that is around the perimiter. aka CH 2,

Repeated Units include various "zones" and unit #'s

140.425 Talk Around Simplex on same freq as above aka CH 3
141.1 Transit Moving the atheletes on busses, units in 400 series
141.225 Internal Ops Most active, lots of chatter. aka CH 4 Units include various colored "Rovers" (Gold Rover, etc), ECP units (?)
141.275 ? IBC COmmand Post, IBC 6, various Posts, rovers
141.525 This may not be in the same series - had the strong military pl "hum" normally found on low band military signals, and was
weaker from my location on the 23rd floor of a midtown hotel Units: Alpha 29, C2, A39 etc

141.925 ? Week, not repeated, may be input to one of the above

Most unusual Frequency

224.50 Transporation Command Yes this is smack in the middle of the hamband...

Maybe this was an intermod product, but heard with full transmissions the entire weekend. Seemed to be a contractor: SOLIS Transportation

Another series - did not check out fully:

139.175 Re Dome 2, Dome 4, DOme 7, restaurant club level, Executve Club level ER3, FS1, Letting people on the field
139.775 RC2 to Command Post

Another series - seemed to be radio tech types setting up a system for use by broadcast crews, This is at least a 6 channel system, lots of tech talk: "
director pl" "Vega Card", etc

480.3 Re putting an antenna on the tower
478.425
478.0
478.700 NBC! Lots to hear on this one!
478.475

There were lots of things happening in the 866-867 MHz band seemed Olymic related, but not the local PD

The rest of the govt bands were buzzin with what appears to be normal stuff:
410.2, 417.2, 412.725, 416.4, etc

Lots buzzin in the 450 and 455 RPB/IFB bands, etc

These are from the ATL_AREA file available at your finer ftp sites, and are what I have programmed into the first 6 or 7 banks of my radio.

Hello there. I live in the D.C. area, so I guess I'll answer that. Here
goes:
154.1900-F1 dispatch
154.2050-F4 EMS
154.2350-F2 Fireground
154.2800-F3 Mutual Aid
154.2950-FMARS Mutual Aid
That's the set I listen to. There are more, but are not used as much.

Kevin

It's obvious that BILL CHEEK DID NOT WRITE THE ABOVE MESSAGE

An individual who goes by "TEEPEE" did and the proof is in the message headers..

The "BOGUS" message supposedly posted by Bill Cheek has these telltale lines...

Organization: Humber College of Applied Arts and Technology
Message-ID: <31F53B05.350C@cts.com>
NNTP-Posting-Host: 142.214.101.66

Here's one from an earlier posting from "TEEPEE"

Organization: Humber College of Applied Arts and Technology
Message-ID: <31F5343E.5046@hcol.humberc.on.ca>
NNTP-Posting-Host: 142.214.101.66

Notice the NNTP-Posting-Host and ORG lines, they are the easiest to determine
WHERE THE MESSAGE CAME FROM. Even the Message-ID matches the first 5 characters
indicating that it came from a particular server, in this case again pointing to
the same one that TEEPEE (teepee@hcol.humberc.on.ca) uses

NOT BILL CHEEK@CTS.COM

You've been caught TEEPEE

It's sad when people post under another person's name just to stir trouble...
Now, WHO's THE ASSHOLE???

Shaggy

I was in Atlanta a week before the Olympics began. Heard lots in the clear
I posted to the SCAN-L SCAN-L Listserv a full listing of unusual frequencies,
and do not have ot handy, but look here:
\
141.xxx six channels of security in the Olympic village, I remember
140.425 Fence Ops - security on the fence that surrpunds the village
141.1 Transit Control
141.225 Internal Ops aka CH 4
141.275 IBC traffic
141.525
141.925

wiersedt freq heard: 224.59 Solis Transporation Comand - yes I know
this in in the 220 Ham band...maybe it was a spurious signal, but solid all
weekend
would appreciater verification on the 224.59 - I was using a PRO 2005 RS,
need someone with different receiver to verify.

>license???

Bill an Engineer!!?? Ha yeh right. Seems like he has a lot of time
on his hands lately. I guess its time to write another book about
some dead scanner.

Have you ever heard of an Engineer spend so much time living on the
internet with nothing better to do? I guess sales are down and its
lonely being so all high and mighty.

You have to understand someone like this. This guy appears not to
have worked for years. He is like a grown up C.B.'er with a lot of
time on his hands. He gets a kick out of hearing himself talk.
He most likely can't pleasure his wife. Chances are he can't find a
job and no one will hire him.

When you become useless and have lots of time on your hands then
what else is their for him to do but mess around on this newsgroup as
well as others. When you books stop selling and it takes too much
time to add your own material and correct errors what else can you do?

Bill needs attention. He gets it here. Treat him like any other sick
person. Feel sorry for him. No one person in years had made so many
enemies like he has.

If your tired of hearing his usless rants then do what I'm about to
do. Add him to your kill file. Anything with Bill or Cheek will not
even load.

Also look for his AKAs such as "I'm an Engineer...dahhh" and "turn
the other cheek" Its easy with Agent.99

bye bye billy!.....

Later John...

If you devote a bunch of channels in one memory bank to trunked freqs, then you could set just the ones you want to hear to Memory Scan Memory (p44 in the manual). Toggle the memories on and off as control signals move.

I'm glad I don't have to contend with trunking here for my listening pleasure.

AOR has begun shipping the first of the final AR5000 production models this month. We are only receiving a limited number of pieces in each shipment at this time and we do have quite a few backorders for the AR5000, so I would anticipate that it will be at least another month until the supply begins to catch up with demand. I've reproduced the pertinent literature sheet containing the final production specifications online at http://www.elecdist.com, choose 'new products' from the welcome page.

Well Andy you just hit the nail on the head.
Let's assume you are the mayor. Your policy is screw the media. Fine. The media will screw you better than a two dollar whore. EVERY thing you do will be blasted. Mayor Andy said.....Mayor Andy did.... you will be sick of getting slammed and notice that the big muder or fire did not get any coverage, yet your mayor car was shown parked in an illegal spot etc.
Why?, becuase you have cost the media money.
No news = no readers =no advertising=no money. But hey, mayor Andy wants to buy new police tools. Hell no, the cops never do anything that's newsworthy. The news never reports on what the cops do, why do they need anything new. What are the cops covering up?
Why becuase the medias ability to cover the news is hampered by Mayor Andy.
Guess what/ Election time.
Who gets endorsed, reduced ad rates, more favorable coverage, free publicity?
Mayor Andy who told the media to screw themselves when they asked to purchase trunked radios OR Candidate Joe Public that made it a campaign issue to equip the media with radios.
If you think that this does not happen I can point to SEVERAL municipalities where people with a negative attitude were booted out of office by the "media". and of course concerned voters. If you do not think that the majority of voters are influenced by the coverage they see then we have nothing to discuss.

3857. FOR Sale -- DC-to-Daylight AR1500

Newsgroup: rec.radio.scanner
Date: 1996-07-25 00:00:00 UTC
From: edseeger@electrotex.com
Message-ID: <4t84vj$k0a@news.electrotex.com>
Source record: 228648
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap,rec.radio.shortwave

Not just your conventional ambulances and park police scanner!

The AOR AR1500 is a wide-range monitor engineered to receive International Shortwave, Military Aircraft and Airshows, Ham Radio CW with a BFO, plus both Upper and Lower Sideband (LSB + USB) as well as 10-Meter FM, Citizens Band (CB), and yes, boys and girls, it is *FULLY UNBLOCKED* and receives You-Know-What!

My unit is complete with its rubber ducky antenna, a soft leather protective case, NiCad battery pack, shortwave antenna, owner's manual, and I'll throw in four AAA NiCads in a backup battery case that fits into the radio's own battery compartment. Naturally, it's got its plug-in recharger, too.

And then there's a copy of Howard Bernstein's (?) AR1000 tricks and techniques book, which gave me a ton of great ideas for setting up search and scan banks for the AR1500. As you'd figure, I'm leaving intact my own memory bank setup to get you started.

The AR1500 was the tried and true predecessor to the more pricy AR8000. If you've drooled at the prospect of buying the 8K but can't quite hack the price, this 1500 may fill the bill for you.

Here on the Texas Gulf Coast it has proven itself a snooper's dream! Cellular? No problem! 49-Mhz portable phones? I know all the neighbors up and down the street! Student pilots starting out in twin engine trainers at the Naval Air Station? I hear them and their tower, while watching them buzz over the house out on Padre Island! Life guards on the beach, talking to one another like junior cops (10-4, what's your 20. Roger Wilco.)? They can't wait to quit a shift with too many jellyfish stings and climb on their windsurfers and head out to the offshore oil rigs.

Coast Guard helicopters, harbor pilots bringing in the oil tankers, foul-mouthed shrimp boat captains, Radio Espana al Exterior, HCJB, and on and on!

Why am I selling a unit I have obviously gotten a lot of enjoyment out of? Simple -- four scanners at home is one or two too many! Period.

I'd like $450 firm for the AR1500. I ship insured
FedEx overnight in return for your certified check.

e-mail me if you want it: edseeger@electrotex.com

Here's two more cents:

Local fire department was dispatched to a medical emergency. (Routine FD response is an ambulance and a paramedic engine.) After dispatch comes a report on the nature of the emergency.

Dispatcher: 'Mother states the baby is acting lethargic in its sleep.'

The Radio Shack telescoping center loaded antenna works great across the board (including AM BC). But I'm uncomfortable when the antenna weighs more than the radio. :)

I agree. About $300.00 is a good price. If you want to sell it quickly,
price it at $275.00.

What are you talking about.

What does it have to do with scanning. Get back to the topic or shut you keyboard up.

Post something related to the form. Not you self delusional attitude you seem to be in.

Radio Shack has them for $4.99 a piece. They have a special catalog for them. Make sure that you know the model number or the IF because there are two different types of crystals based on the IF.

BTW, the service is good, in my experience. I received the crystals by mail in less than a week.

Neil Bell wrote:
>
> I am seriously thinking about purchasing a new AOR8000 scanner and wonder
> if anyone has any serious complaints about them?

No real serious complaints. I love the thing. After owning one for
almost 2 years I have some general comments.

1) Antenna that comes with it is a compromise. Get Austin Condor from
Grove, I myself got a Diamond RH77CA antenna. You will be much happier
with a better antenna.

2) Battery life good but not outstanding. When batteries (alkaline or
rechargeable) start to die, audio makes annoying rasping sound.

3) Car lighter charging can make NiCd's hot.

4) Rubber knobs are mushy. Easily cured with elec tape applied to metal
shafts which gives them a more positive rotational feel.

5) Hard to tell position of top knobs visually. Easily cured by using
some sparingly applied white silicone caulk to just one knurn on vol and
squelch knob.

6) Scanner resets itself if a passed (locked out) channel is loaded into
the VCO accidentally. Does not erase frequencies though, thank god.

7) Vulnerable without the case. Get the leatherette case.

8) LCD panel viewing angle is narrow. Washes out if viewed from any of
the 4 sides.

Still a terrific radio. Get one, learn it, thank me later.

Mike

I have a Realistic 2.2" LCD color tv with vhf/uhf in excellent
condition. Model is Pocketvision 22. Works great with earphone to watch
tv in bed and save your marriage!!! Also good at sporting events, on
your boat, camping, to keep the kids busy in the car on long trips,
for when the power goes out, at the office (only during lunch!!) and in
the bathroom!!!(not that I would know this!!!) I would like to trade it
for a scanner, 220 ht, or 2/6-meter base/mobile or???
I also have a Micronta model #22-195 Bench top Autoranging 4 digit LCD
DVM with tranistor hfe and junction testor built-in. Both are in
excellent condition. I would trade this seperately or together for the a
scanner, 220 ht, 2-meter Mobile/base or other amateur equipment.
So what have you that you aren't using too much? Want a neat new toy?
Give me an Email!!!
Thanks!
Bob

AB>Just acquired a 89 Ford Taurus

AB>Need some ideas on installs of mobile scanners... Where the hell do I
AB>put them? Looking like will need to pull maybe something out or
AB>build a special mounting bracket for the car to hold my scanner (RS
AB>Pro 2026).

AB>Ideas?

I've had good luck with a variety of mounts, but probably the easiest is one of those Cellular pedestal mounts placed on the center hump. Then you can mount the scanner on top of that and have lots of adjustment options. I used a similar setup in my 1995 Dodge Intrepid to mount a BC 950 and ham radio. This of course assumes that your car does not have a center console. If you do, it becomes a bit trickier, but you can still use the same type of mount, it just takes a little bit of ingenuity.

: Thanks

If no water has gotten inside, then it's probably ok...BUT...electrical
tape is not a good seal...better choices are...
1.silicone sealant
2.coax-seal
3.the special type of heat-shrink tubing that has a flowable
lining(probably the best method).

Don't use hot-melt glue, even though you may be tempted to do so-it will
not maintain a good seal under field conditions.

Just do what I do. Say, 'This is a cash sale.' or 'Thank you, but I don't need any catalogs, or flyers'. If they insist, just say you'll take your business elsewhere, that's the LAST thing they want.

I'm thinking of buying a PRO-25 and was wondering what I would be missing out on. The following ranges are the missing ranges:

25 - 29
45 - 108
136.975 - 137 (weird?)
174 - 406
512 - 806
823.9375 - 851
868.9375 - 896.1125
956 - 1300

Thanks in advance.

East Brunswick Township is finally getting around to implementing their 6 - 500 MHz freq's. The council meetings I had attended 3 ye=
ars ago had them leaning towards a 500 meg trunk system, possibly encrypted.

Since then their $$$ problems have kept the new radios system from becoming more than talk. But as of this week the news articles ha=
ve listed Moneyrola of Glen rock as the company which will provide the town with a system for $754,000.

Not much can be gleened from the article. But my guess is it will be a trunk system. I'd like know if any other towns in NJ (elsewhe=
re too) are currently using or will soon establish a 500 trunk system.

I'll post any info I can obtain about this system, perhaps it may help someone monitor trunk radios easier. South Brunswick has use=
d it's 800 trunk system for a few years now and we all learned that monitoring the input freq's was the best way to get around GE's =
anti-scanner tones.

Most talk groups stick with the normal township freq's but they also use some of the 5 mutual aid channels listed to the 800 band. I=
'm finding this to be common in NJ since I found the NJSP doing so years ago. The NJSP also uses portable rptr's. I'll post a separa=
te NJSP article with freq info.

Middlesex County is currently switching county radio users over to it's 800 GE system. There was a mention of "rotating DVP", at lea=
st that's what I thought the tech working on the system said.

There are very short and noisy bursts that sound like DVP every once in a great while, I've also heard them on the input channels. T=
his has occurred since October '95 when they started to set this system up. Does anyone have any knowledge of what they are using?

If anyone has info on trunking they would like to post or E-mail, I'll be happy to share whatever I have in return.

Thanks,
LGS

Exactly correct. The digital radios in use by most federal agencies employs DES encryption. It's more than rumor - nearly everyone around Atlanta is using DES (except for non-sensitive agenices like the GSA, BOP or the NPS). Strangely, though, the DEA around here is 'in the clear' quite often. My 'close source' in the FBI (OK, my dad) tells me that agents will go clear because the range while in scrambled mode is reduced signicantly.

For practical purposes, DES is unbreakable (though the folks on the cypherpunks mailing list are rumbling about trying to mout a distributed attack on it).

Cheers,

Jay Q.

One night after snuffing a small fire on a telephone pole out in the ills here in Thousand Oaks, Engine 35 became stuck in the mud they had created fighting the fire. Engine 30 was dispatched to cover station 35 while Dozer 4 was sent to pull out the stuck fire engine. The radio traffic was hilarious, as this was 3am and there were no other calls in progress.

E30: Ventura Engine 30 is in 35's quarters, curling up in thier warm beds.
Disp: 10-4 engine 30, what do they have in the fridge for breakfast?
E30: Ahh.. Ventura, doesn't appear that they have anything good.
E35 Engine 30, engine 35, you touch our donuts and you won't get out of there alive.
E30: Dozer 4 from engine 30, you can cancel you response, engine 35 says they like playing in the mud.
E35: Oh that's cruel, Dozer 4 from 35, don't listen to them
Dozer 4: Confirm cancel
E35: No!!!!!!!

About an hour later after they were pulled out of the mud, it got even better

E35: Ventura Engine 35 is free, we're going to be available in a few, you can have 30 return.
Disp: Ventura copy, any donuts left?
E35: Affirmative
E30: 35 from 30, have fun washing your engine!
E35: That's what the next shift is for.

And one that isn't so funny, but just stuck with me, from the files of the Ventura City FD December 1991.

Engine 5, rescue, heart attack victim at the San Buenaventura mall, be advised, the victim is the Santa Claus.

I was going to say the same thing. I find that the telescoping whip works very well. While I'm sure it's not as good as an outdoor mounted on a mast, it does a fine job with my Bearcat handheld.

I might add that a right angle BNC connector is very helpful since it can prevent a handheld from becoming topheavy.

Source record: 228742

There are 2 popular computer control packages available for scanners:

CE-232 from CommTronics Engineering, San Diego CA. This requires some soldering and other surgury to your 2004/2005/2006 (I don't know if it works with the 2035/2042). This allows one to upload/download to the radio to/from the computer. It will run on a Mac with SoftPC or SoftWindows, or a Dos compability card and using dos/windows based software.

The OS456/OS535 boards by OptoElectronics go in the radio easier, just unplug most of the guts and plug this in, but does not allow UL/DL of freqs. This will run most radio control software for Dos/Windows, as well as WAVE for Macs.

WAVE is so far the only Mac program to run these radios. It is very elegant, and stable. I run it on a PB140, Q605, and a PPC based P6220 with no problems.

Macs will run the Dos programs under emulation, but the cable has to be homemade. I suggest Wave if you want to use a Mac.

Most Dos/Windows programs will also run certian other radios, such as the AR8000, R7000 and others. So far, WAVE only runs the OS456/OS535 radios, but Mike is working on a R7000/R7100 version.

THAT is strongly suggestive that Mr. Hugh Duff is "teepee", then,
since his regular point of origin is the same place! Check the
headers from Mr. Duff and you'll see a lot of similarities!

I still think it is Mackey trying to blame it on Duff, but I could be
wrong there.

I hadn't made the TEEPEE connection before now, but that is something
to look into. Could be Mr. Duff after all, trying to blame it on

Mackey.

Hmmmmmmmmmm!!!!!!!!

Good work, Shag! You're a gentleman and a scholar....scholar anyway.
:-)

Oh Bill come on get off of it. I am not as dumb as your Fidonet
groupies. There is no way in hell that the government contacted you
wanting to know how to find me. (Even PrB said you like to use that line)

This is why:
I am registered to vote.
I have a drivers license.
I pay taxes to the Feds & state.
I have a license by the state & feds for a (recently) former profession.
I have 2 FCC licenses (my ham license was pointed out previously)
I have vehicles registered in my name
I have a state issued handgun which required an FBI check

THE GOVERNMENT WOULD HAVE NO PROBLEM FINDING ME, YOU ARE A LYING FOOL.

Surely, you don't think I would believe *YOU*. (especially with the
way you lie)

Hell, your tagline on Fidonet is a huge lie. (about you being a Win95
MS adivsor)

> Can't help it for the time being. Hang in there.

This morning you wrote a message saying "fuck all you people" and
something
like "I've had enough". It sounded like you were leaving.

Oh yea, get it thru your head. I DO NOT HAVE AN INTERNET E-MAIL
ADDRESS. I only have a Fidonet account (you SHOULD remember that)
& I have NO intentions of getting an internet account. You & your buddy
can go ahead & contact all the ISP's you want by looking at the paths of
these messages. Have you ever heard of an anonymous news server??? (DUH)
I am really impressed that you guys figured out how to read thru a unix
box or enable headers with your browser. (I believe you are running
Netscape 3.0 beta 4 or 5, I can't remember for certain) Maybe next
you'll
learn how to set up an NT server on release 4 or something a little more
cutting edge like that.

Maybe we should contact YOUR ISP about your behavior here saying,
"FUCK all you people". It wouldn't take much to finger your ISP

and find out who the system admin is.

One night when I was dispatching on a local PD primary channel, an officer called out stopping a suspicious vehicle. The end of the transmission was:

"Don't move or I'll blow your f***ing head off!"

I had an officer involved in a foot chase on another night. He stopped calling the chase for several seconds, so I asked him for his current location. His reply:

"I don't know. I can't see. I've got blood in my eyes."

You can imagine the icy shivers as I tried to ascertain whether it was his blood or the suspect's, as we had no prior indication that anyone had been injured.

If the right bandplan were programmed into the radio, then it could be left in auto mode for programmed search. That would take care of this problem. I can't help but think that this little guy is somehow bandplan programmable (not easily, but possible somehow). That would make it much closer to the R1 in functionality. Thankfully, it's already closer to the Yupi 7100 in sensitivity/selectivity.

Does anyone have any good airshow frequencies such as the Blue Angels, Lima Lima flight team, or any other flight group? There is an airshow in my area (July 27 and 28 at Sprinfield, IL Capitol Airport) and I'm looking for any frequencies that would have airshow related traffic. Any help would be appreciated.
Please respond by e-mail as I don't get back to this group often.

chainsaw wrote:
> How many channels on this rig.,and ch. per sec. scan does this scanner
> do?

It has 400 scannable channels in 4 banks of 100 (not a great setup, but workable). Another 100 memories are reserved for search lockouts (although I actually use some for AM broadcast and TV audio so I don't have to mess with them while scanning the 400).

Scan rate is hard to rate. First of all, it's not a speedster even in optimum conditions. But if there are large jumps in frequencies between channels, the scan rate slows a bit. In search, tho, it's about 12-15cps. The manual doesn't list this specification anywhere.

Bill Cheek is now being "spoofed" in the newsgroup. For those of you who are new to this, spoofing is what we call falsely using someone else's identification to post email and newsgroup articles. The spoofer lacks Bill's educated way with words and is resorting to very brief, insulting messages with the clear intent of furthering the assault on Bill's reputation.

(I won't deny that Bill may have done some of his own damage, but that's another debate and we are conducting that one in private email.)

Since we already know that one "KA0SSJ" has been using a false account to access the newsgroup for several days, and since I sent email to the sysadmins of every system through which an email from him passed enroute to my system, the clear implication is that he may be the guilty party. He does possess the ability and low morals to engage in such behavior, as he has already demonstrated.

I have one reason for posting this at all. I think the stink in here is already intolerable and I hope all the kiddies go home and wash up for dinner now. We don't need a spoofer prolonging the agony. Ignore it. Please.

Here's my research: Do a search for teepee@hcol.humberc.on.ca on
dejanews, you will find that he has posted as Tim Pacan on several
ontairo local groups.

And guess what.. altavista for "tim pacan"...
Here's his web page:

http://halifax.terraport.net/teepee/main.html

Not that bad of a photographer, actually.

Link around.. You'll find http://halifax.terraport.net/teepee/title.html

Guess what other web page is hosted by Tim?

http://halifax.terraport.net/teepee/va3to.html

Hugh Duff's. AKA VA3TO. I surmise that Tim Pacan is a friend of Hugh's
with a bit more internet experience who Hugh asked to help him "flame"
Bill. Unsuccessfully. Nice try, Hugh.

I'l leave the flaming to others. I do the research.

-Ben

I've said it once and i'll say it 1000 times: Dejanews rocks.

Depends. What IF they won't stop, period? Ignoring flies won't make
the dern things go away.

It may work with some snotballs.....but not those on a "mission" as
has been openly professed by one and demonstrated by three more.

Then what?

Maybe it takes a WHOLE newsgroup to get matters settled. I'm all for
a settling, all right. But they won't go away by ignoring them.

So what do you suggest?

Whatever. When I first started reading the group several months ago, I admired the lack of FLAMEWARS in here. I am accustomed to varied amount of flames (I read alt.games.quake, playstation and chess newsgroups...)

The PSX and Quake are FULL of shit like this, whereas this group and the chess were not. I had grown to enjoy reading this and chess groups because of the VERY professional and pleasant atmosphere. But not for long. This one turned to hell.

Ah well (sniff sniff). Time to turn on the Agent killfiles. God bless Forte Inc.

Really now? Ok, let's see........

> And even if you wrote back to me that way, I have a cooler head.

Ok, let's take that for granted........Cool Head Luke, you are.

>You come off looking very unprofessional in this newsgroup.

That's *not* a "personal comment", I take it? I didn't think ol' Cool
Head Luke said shit like that.

> I've bought some of your products, but I'd sure have had second thoughts
>about doing that if I'd seen your antics here.

Yo, DAVID STARK! Pay attention to this one. THAT is one of the
things I was talking about.

Anyway, "Amnesia", sorry about the distraction there. Me and David
were discussing some in's and out's about things in general and you
raised an interesting issue. But THAT wasn't a "personal comment",
either, eh?

> Truly, they remind me of schoolyard fights.

Oh. Wow. No shit? THAT ain't a "personal comment", either?

> If a schoolkid came up to me and tried to
> fight, I'd not respond in kind, because I'm not a schoolkid.

Oh. Well, me neither. But unless they fooled me real good, Mackey,
Duff, Boe, M.Alexander and Company ain't schoolkids. They ARE
textbook examples of exactly why there are more horse's arses in this

world than horses. You'd get a little persnickety and nervous if you found a horse's arse in front of ya; one behind ya, and one on either side of ya, now wouldn't ya? I mean, hey, you don't know if they're fixing to kick or just pass gas. Either one ain't fun.

>Furthermore, you are pompous. I know you will never admit this,
>because you are pompous.

That ain't a "personal comment"?

Well, let's settle THAT argument right in the bud. How about if I 'fess up that I am a pompous S.O.B., would that tickle your fancy?

-= Bill Pompous S.O.B. Cheek =-
(The real one)

Howzzzat?

PS: Now what was THAT you said about NOT making "personal comments" about me? Would you care to run that by me again? I'm afraid I got all confused over your impersonal comments........

3939. Ideas on mounting scanner in Ford Taurus

Newsgroup: rec.radio.scanner

Just acquired a 89 Ford Taurus

Need some ideas on installs of mobile scanners... Where the hell do I put them? Looking like will need to pull maybe something out or build a special mounting bracket for the car to hold my scanner (RS Pro 2026).

Ideas?

John what does that have to do with scanning. You must be getting copies from PjB. You said yourself you were only around for 2 days and jump right in.

So, if you haven't been around long, what is your involvment, get back to scanning.

Joseph

RICK SWL (rickswl@aol.com) wrote:
: I have a dipole antenna mounted inside my attic. Should it be grounded?
:

I don't think so.

I've never heard of a dipole being earthed.

A dipole is not designed to be earther, the pole connected to the
coax shield acts as the earth instead. I think that actually
connecting this pole to earth will upset its properties and
reduce the performance of the antenna.

I think that the only arials that bebefit from earthing are those
that have a vertical ratiator, and horizontal ground planes, or
no ground planes at all.

Good Luck.

Richard.

Agreed. Actually I have nocomplaints about RF performance here;
considering the degree of miniaturization and use of only 3 volts of
power, it's really quite impressive. It could use a duckie with a more
uniform response across the VHF/UHF spectrum, but that's often true of
"bundled in" antennas. Replacing it should not cause a major increase in
overall size; since apart from being thin at the top, the included antenna
really isn't =that= small.

: : never took it with me as it is not as portable).

: : I found various frequencies in use in the aviation band, but I have some
: : questions as to how they are used. I found a tower frequency, ground
: : frequency, and a ramp frequency. How do these interact? For example,
: : ground would tell the plane to taxi via various taxiways, then to
: : "monitor tower". However, I did not hear these planes call the tower to
: : let them know they were ready.

[snip]

I'm not a pilot, but have listened to comms at O'Hare Field off and on.
On takeoff, when the ground controller hands the plane off to the tower,
the tower is expecting that aircraft because it has joined the line of
taxiing planes and the tower assumes the plane has changed freqs. When the
pilot confirms an instruction, the controller knows he's there. I assume
this is done to avoid excess voice traffic eg. "Hello, here I am. Ah, yes,
I see you." 8-)

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the baseband audio out of
various scanners for decoding of a variety of esoteric signals,
including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such signals
cannot be take from TAPE REC jacks, headphone jacks, and EXT SPEAKER
jacks because of the voice-band filtering that is done between the
signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the
output of the discriminator chip for your scanner. The below Table
shows a list of scanners, the discriminator chip(s) used in the
scanner, circuit symbols of those chips, and three pins of general
interest on the chips: RF-Input, Scan Control, and, of course, the
baseband audio pin.

Even though your scanner may not be listed, if you can find its
discriminator chip, it will be listed with one or more scanners below,
the pins of which will be the same for your unlisted scanner!
Corrections and additions to this list are requested. See my mail and
other addresses at the end of this file.

While we occasionally fix old Bearcats here (out of some loyalty and
family firm ego) for the most part we refer repairs (particularly on
models we don't have parts/data for) to Gerry Oliver at g&g
Communications 716-768-8151 www.iinc.com/~ggcomm/
He's been in the business a while and I've not heard any complaints
in re his work (as opposed to certain other manufacturer/repairers).
Give him a try!
Best Luck, Dave Lovell, W9DAG, Owner - current incarnation of
Electra Corporation - Where scanners were first conceived!

Hello all,

Has anyone got experience with the new
'WiNRADiO' PC card scanning radio ?

WiNRADiO is a 16-bit card equipped with
an all-mode scanner that covers 500 kc
to 1300 mhz.

I've been playing with their software
(for lack of the card only in the 'demo
mode' :))) - Looks great!!!

I am about to oder it, but before doing
so I'd like someone else's opinion or
experience...

Thank's a million,

Markus
from the 'Sound Of Music' city
Salzburg, Austria

P.S.: The place to get info on WiNRADiO is:
http://www.kiss.com.au/winradio/

P.P.S.: I am in no way related to the company
that produces this gadget. :-)

I'm game on this one...I just can't stand the ego and condescending
"I'm the scanner King and you are all below me" BS.
It's the attitude that rubs people the wrong way.
If he could control himself and act like a decent person I would do the
same. I'm not prepared to to be verbally abused and threatened by
some bully who likes to have it run "his way or no way".
Its different here on the internet as compared to FIDO where Bill has
gained full control and flexes that muscle abusively.

If he can "be a good boy" then he hill have no flack from me.
Otherwise he'll just have to put up with it...not necessarily from
myself either.

I was wondering what people's experience was scanning at DL?

I've heard that DL frowns on bringing scanners, but do they actually check your backpack on the way in?

I already have a listing of frequencies I've trolled from the group and from my PerCon CD. It looks like there is a lot of 'classic' 15x and 46x business band stuff.

I've heard mention of a trunked system. Is it in use yet? How 'trunked' is it? Do they assign a single service per channel, or is it multiple services per channel per conversation?

Finally, has anyone heard anything interesting over the radio that has added to their DL experience? Any information which helped you avoid some traffic?

Have you ever though about this approach? You don't neccessarily have
to SEE or even TOUCH your scanner, if you wire it to come on with the
ignition, and use an external speaker. You could put it in the glove
compartment, in the trunk, or even under the seat. This would also
improve your auto security, as there wouldn't be a visible invitation
to thieves. :-]

Interesting question, Jeff. The best way to answer it is that
personally, I would not purchase the AR2700 I tested -- even at a
low price.

It skipped over too many signals of interest and had too much
internally generated noise. I'd be out $210 for the privilege
of owning a portable scanner I don't like and wouldn't use.

Tastes vary and you may like the AR2700.

(Glenn Reed)
<4t5v18$n31@usenet.srv.cis.pitt.edu>:
posted this outstanding summary. Here is some more info:

>up is finished, the pilot informs ground control and is given a clearance to
>taxi to the runway and contact the tower on the tower freq. The tower will
>then clear the A/C for take-off. If the airport is located in class B or C
>airspace, the tower will hand off the A/C to approach/departure control.

In addition to these procedures, commercial and
commuter carrier aircraft will make contact with the nearest
ARINC ground station serving their airline to make a
departure report to their dispatcher. ARINC (Aeronautical
Radio Inc) stations operate in the 128.8 to 132.0 MHz range
under contract with various airlines. A particular
frequency and ground site may serve numerous airlines.

Most ARINC traffic is still AM voice mode, but a
growing number of companies are sending their company
private information digitally via ACARS (Addressable
Communications Aircraft Reporting System - I may have my A's
reversed).

> If the A/C is arriving, the procedure is pretty much reversed. Of course,
>there are other things that can and do occur. For instance, you might hear the
>pilot ask the tower or app/dep control to activate or cancel a flight plan.

Also, the commercial/commuter flight will again
contact the ARINC ground station with an "in range" report.
At this time they will relay any requests for special
support upon arrival, such as wheelchairs, food, etc.

The ramp support operations can be found on
frequencies in the 460.700 to 460.875 MHz range. Aircraft
do not transmit on these channels.

>Please reply to newsgroup. Thanks

>Footnote: System is not going to be operational until late 1998.

I would suspect an 800-1000Mhz trunk system. Delta and Airport RCMP are
already on 800 (not trucked though I believe), they might have been a test bed.
The system sounds pretty expensive and encompasses a wide area. It could be
that they will setup repeaters that actually take VHF traffic and move it to
800Mhz and vise-versa allowing the small towns to still use VHF as required.

A neat idea would be to use some bandwidth on the new low orbiting satalites
used for the new international cellular coverage, that would provide a modern
system and get around that nasty line of site problem.

Still I suspect a lot of repeaters, maybe sharing installation sites with the
phone companies Cellular installations.

This is more a case of "had to be there and know the circumstances,"
but here goes...

I was working a detail to day that is usually worked by 6-8 depu-
ties. We rotate specific assignments according to a daily
schedule whenever we hear the dispatcher call out, "All 500 units
rotate."

Today, I was at my post when the call came from radio, "All 500
units rotate."

What made this funny (and a bit ludicrous) is that today, I was
the only deputy out there!

Yup...I stood up, did a spin and went back to work :-)

You can get new knobs from Edco, but I used about a 1" long by 1/8" wide strip of electrical tape, wrapped around the top section of the brass shaft, just above the notch in the shaft. Carefully push the knobs back on and they will have a much stiffer feel. You have to push them on such that the action of pushing them on does not force the wrapped tape out of place.

I also put a line of white silicone caulk in the knob knurl opposite the gray dot so that you can much more easily see the position the knobs are in.

Mike

3968. Buy/Sell A Used Scanner Lately?

Newsgroup: rec.radio.scanner
Date: 1996-07-26 00:00:00 UTC
From: michael@alexander.terranet.com
Message-ID: <michael-2607961826030001@news.terra.net>
Source record: 228595
Cross-posted to: rec.radio.scanner,rec.radio.swap

I've been working on a pricing guide for used (mint-condition) scanners for a while. The current version is posted at www.ultranet.com/~bellvill (Robe Belleville's web page). As most people realize, there can be a substantial difference between the asking and selling price and I'm trying to make sense of it all...

One of things that puzzles me is that recently I have seen a number of messages from scanner sellers who seem to think that because they're scanner is cellular capable or modifiable that it is worth more than one that isn't. Not so, from what I can see. There is no added-value or premium at all.

Anyway, if you bought or sold a scanner lately please let me know the model and the price and I'll include the info in the next update. Best way to reach me is at: malex@kersur.net. I'll be dropping the ISP that I'm currently using at the end of the month.

>price it at $275.00.
>
>Jim Wayda
>Captain, Scanner Price Police.

I tracked the sales of more than 30 of these scanners in the past year of so. The asking price range was $275 to $450 for a mint-conditioned scanner with box etc. The average selling price is $325 (many of the people who have sold at that price have claimed to me that the units were either new or like new).

If anyone wants to see the used scanner price guide, go to www.ultranet.com/~bellvill (Rob Belleville'scanner page). He's also got my computer-aided scanning FAQ there.

If you've sold or bought a scanner lately, let me know the model and the price. I'll use the info to update my price guide, which I haven't done in about three months.

Yes, you're a fine upstanding citizen - with a bogus
address and a serious attitude problem. Can it.

>these messages. Have you ever heard of an anonymous news server??? (DUH)

Actually, I have. An anonymous server leaves some
evidence of its presence in the message headers. Care to
point it out to me?

>I am really impressed that you guys figured out how to read thru a unix
>box or enable headers with your browser. (I believe you are running
>Netscape 3.0 beta 4 or 5, I can't remember for certain) Maybe next

No, I have enough relevant knowledge to use a
separate application for news. And it runs under Windows
95, so just jam that foot in there a little deeper.

>Maybe we should contact YOUR ISP about your behavior here saying,
>"FUCK all you people". It wouldn't take much to finger your ISP
>and find out who the system admin is.

If you were REALLY knowledgeable about the Internet,
you wouldn't have made such a ludicrous statement as the
above. I didn't have to "finger" anyone to send messages to
the sysadmins 'cause I already KNOW how to reach them.

I would not expect a newbie like yourself to
recognize the signature of a spoofer, either.

Well...I guess you have me there...the media did get rid of Bush and got Bill elected. (grin) Seriously, though, as I have said many times before on different threads about this same subject...the media, scanner listeners and police buffs are generally NOT even considered when upgrading/changing things like radio systems. Serving the public better is the number one, top of the list, main priority. (Beleive me...I've been involved in the process often enough to know...)

Now, if the media were doing a complete job of detailing what the city (PD or whoever) was doing, the public would know that the system (or what ever new equipment/policy was being implemented) was going to make their city safer, blah blah blah.

I've talked to my 2 friends that are in the media (one a local radio news manager, and another a long time AP officer) about this, and they agree with me for the most part. Granted, they are only 2 out of thousands of media types, but they are the only ones I know very well.

I hope you don't take offense, but the media is not in the big picture (in the mind of the PD) when it comes to protecting the populace. I've also said this before...the media are important, but not as important as taking care of things at hand. If they can get their pictures/video/stories without interfering, that's fine...but don't expect the law enforcement community to sacrifice the safety and efficiency of their officers or the citizens by accomodating (spelling) to the media. Once the scene is secured, the evidence collected, etc., then let the media do its thing...but not at the price of doing a good job of police work.

I guess what I am trying to say it that the media and PD need to work together, all the while respecting what the other must do. When it comes down to brass tacks, I think that most people, when asked if they would rather have the police get all the toys and manpower and related items so they can do a better job, or letting the media in and quite possibly slowing down or impeding the process...they'd elect to allow the PD the opportunity.

I should have mentioned this at the beginning of this, but I am talking about in-progress and/or "just happened and we don't know what the devil we have yet!!!" type calls. You know...the guy holed up in the McDonalds with a machine gun, dead bodies in the street, etc. Once the call has been neutralized, then I feel that the media should have access to the scene and details of the call, as long as releasing the same would not compromise the investigation.

BTW, I truly enjoy this type of conversation. I don't get personal, nor do I take offense at someone else's thoughts...as long as they don't get into name calling!!! But that would never happen on rec.radio.scanner!! (grin) This type of discourse causes both sides to re-examine their standings and either change them or be able to have a greater conviction about their thoughts.

Let's continue, if you would like to.

Andy

One...buy the smallest scanner on market.

two: have you considered a Portable Scanner with mic ext which then you can get a great speaker from Radio Shack and do it that way. You can buy an adaptor for powering it from cig lighter which will keep the scanner charged. And then for the icing in the kazoo: you get to take it with you.

If you have two scanners, you can by a "Y" adaptor from Radio Shack that allows two to be connected as long as there is a way to get the cig adaptors on ends of power cords....

Or buy double power converters seen in discount stores or mail Order....one has two power sources you can plug in and work off your cig lighter...I have one of each....run my Cellular off it all time...then when i need to use my portable radio just hook the odouble one up and it works.....can even run a t.v. set off the converter....a monitor....

Does your car have a hump...tranny hump? IF so, mount it there as I do with three scanners in my Jeep Cherokee. Space is limited in Jeeps if you have floor tranny. Great if you have a tranny stick on steering wheel...all that free space to mount many small scanners...like the BC 780 or 980.

You would think by now that they would begin making scanners the size of a paperback novel....for places more easily connected to. No need for a speaker, all you need to is buy one. Or do as they do with the MR100's.....provide a detachable with it.....or maybe a bit bigger than a paper

back novel....

That material is being distributed by email to those that have requested it.
And you can give the contents of the babys diaper to Cheeks. He goes in
for things like that.

Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner

Radio Depot in Bremerton, WA was recently burglarized.

Forwarded message:

The Kitsap Co sheriff Dective Division is the
investigating authority at 360-876-7101

As you have heard by now Radio Dave was burglarized Saturday nite The thieves
gained entry by forcing the front door. His insurance status is uncertain at
this time. This event could put him out of business.

Here is a list of the stolen equipment from Radio Depot, Bremerton.

Please distribute it to your friends, local radio stores, and publish it in
your club newsletters, etc.
We plan on giving this national distribution but need your help in doing so.

As you can tell the loss is substantial.

Thanks, Dick

That has NOTHING to do with scanning, scanner radios, or anything
except a number of highly-injurred egos. Shut UP on this subject.

I came in this forum to get info on scanners and things to listen to
other than the aero stuff I get on my homebrew, limited-band scanner.
If all you want to do is denigrate another, call names, etc., go try
alt.sex.oral.orgasms or similar.

And there YOU go trying to PLAY like you and Tim Pacan a.k.a. "TeePee"
aren't acquainted! You have a homepage under HIS webpage, fer pete's
sake.

3988. AR3K remote cntrl

Newsgroup: rec.radio.scanner
Date: 1996-07-26 00:00:00 UTC
From: Lance Fisher <lfisher@cyberoptics.com>
Message-ID: <31F8F3C4.21F2@cyberoptics.com>
Source record: 228615

I own an early AOR AR-3000A (800mhz unblocked when new) and am using it with ScanCat-Pro. I have also fooled around with coding my own control software and have found (by experiment and from reading the manual) that several functions cannot be controlled via the serial link. Specifically I would like to load up a bank and then initiate scanning in that bank. The bank loading is easy but there seems to be no mechanism for activating a (scanner controlled) scan or search remotely. If anyone has any ideas on this I would love to see them posted. I may even consider reverse engineering and modifing the uP firmware in the scanner as I have access to some good tools (in-circuit emulators,assemblers/dis-assemblers, logic analyzers, etc.) but probably lack the spare time to do this without some sort of head start.
P.S. Performance wise I have been really impressed by this unit.

Date: 22 JUL 96 10:31:58
Organization: Digital Equipment Corporation
Message-ID: <4t03iu$2nd@mrnews.mro.dec.com>

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

>any advice?

The PRO-2004 was sold from September, 1985 to May, 1990
The PRO-2005 was sold from May, 1990 to May, 1991
The PRO-2006 was sold from May, 1991, through August, 1994 (or so)

All are on the "used" market now. Of the three, it is a toss-up as to
which one is "the best". The PRO-2005 is the "worst", however,
leaving the competition between the PRO-2004 and the PRO-2006. Not
that the 2005 is a low-grader, it isn't. It's just in between the
2004 and the 2006 in terms of many desirable characteristics.

For reliability and longevity, the 2006 is probably your best bet.
For aesthetics, modifiability, ease of operation, and several other
benefits, the PRO-2004 is unequalled.

Michael,

I recently bought a PRO-39 for 75.00. I have had offers for it, modified, up to 150. I think that
is a little high, but hey if they are willing to pay why not.

In Fresno, a PRO2006 will list at ~325 and sell ~275. Hope that helps.

Joseph

Do I know him? Yes. Did I DENY knowing the culprit ? No !
What I DID say is "Someone here (at my same server) is playing games..."

No denying it..."Teepee" kindly setup a Web page for me.
He also took to jumping in on the fun...unsolicited I might add.
However I'll be the first to admit he went a little beyond my tactful
approach.

So now that this has been laid out...I'm an honest man, how about you ?

How about answering some of the queries we had Willy ?
I promise not to make an ass of you (what you claim to fear if you
dislose your "Alma Mater") if you can prove you have a real

Engineering degree. In fact...I'll formerly apologize right here on the
newsgroup if you come through !

And I promise to do nothing more than verify your "Ham Instructor" claim
if you can provide callsigns !

Just think how little I'll feel and how it will boost your image
if you can substantiate these claims !
How's that for a challenge ?
I'm offering to shoot straight from the hip. No BS !
The newsgroup is my witness.

If you decline, whe know where your credibility stands !

Lets see what kind of distorted answer we get to this one guys.
I can anticipate it already... "I need not prove anything to anyone..
I owe nobody any explanations..."
<heeheehee>
You owe the truth to all of your followers.

Ooops...did you forget to quote the whole sentence ?
When I said "I'm game on this one" it was in cooling things down.

HD> > I just can't stand the ego and condescending
HD> >"I'm the scanner King and you are all below me" BS.
>
BC> I don't say that about me. Others do. I -=am=- one of the few, if
BC> not the only engineer, who's 100% committed to the field. I asked you
BC> before for names of others, but you wouldn't put your money where your
BC> jaws are, so.........????????

Ahh...okay. I can live with that. "... one of the few" is fact.
"...if not the only" is egotistical.
"..engineer"...well thats a topic up for debate.

BC> Depends on how I am treated. First I posted an impersonal FAQ. And
BC> wow, you came running like the hogs called to suey........ There was
BC> no issue of "control" and decency there.

I explained myself. I had some steam to vent with regard to you and
I did it.

HD> > I'm not prepared to to be verbally abused and threatened by
HD> >some bully who likes to have it run "his way or no way".
>
BC> I have NEVER addressed you in n aggressive, hostile manner FIRST.
BC> Only in response. You can't dish it out and not take it.

Now this is totally inaccurate. I'm normally a level headed
individual who happended to cross you with some technical dialog
a while back on FIDO. We got into discussion about scanner interfaces
and you lost it when it got above your head (since you didn't design
it after all.)
YOU are noted for flying off the handle with folk and thats what
happened with me. Really...I'd have no "axe to grind" otherwise.
Although my latest challenge appears on the surface to be initiated by
me, anyone who knows you or has followed the thread will appreciate
otherwise.
I have absolutely no interest in stirring up BS for no reason.

What I DO have an interest in is standing up to bullies like you
who have gained a fat head of an ego from being a dictator. I won't take
your BS lying down like the technically deprived folk and your cronies
whom you'd strung along.
You decided to put an end to my FIDO connection so I'm venting off here.
If you didn't have such a stubborn, condescending egotistical ATTITUDE,
I might have simmered down by now.

HD> >Its different here on the internet as compared to FIDO where Bill has
HD> >gained full control and flexes that muscle abusively.
>
BC> You are dealing with something that does not pertain to HERE for one
BC> thing, and for another, it is spilt milk from an old time, a year ago.

This more or less confirms that you acknowledge that I was bitter
with you a year ago.

>
HD> >If he can "be a good boy" then he will have no flack from me.
HD> >Otherwise he'll just have to put up with it...not necessarily from
HD> >myself either.
>
BC> Oh well.........WHO decides this "good boy" status?
>

Oh, I think it boils down to 2 things..

1/ You go away...which is unlikely because you've decided its time to
break out of the Cheek saturated FIDO group and try to expand into the
Internet newsgroup...where the real market is. And as you are aware,
Opto and some other brand scanner hardware favorites dominate this group
of which has everything to do with your sticking around.
(Truth be known, You 'own' the FIDO market [I wonder why], Opto and
some others are the favorites here.)
Its quite apparent at this point that your main reason for floating back
around has everything to do with trying to crack a new market hence
the FAQ advertising masquerade.

2/ You stick around and keep your advertising out of it.

Who decides this. ??? The masses here on the group...thats who.

Telling it like it is,

Hugh Duff VA3TO Toronto

One of our guys went to a lady who had "little men" running around inside her mobile home. He shoo-ed them from behind the couch and funneled them outside. He told the lady to go outside while he "sprayed" the inside with anti-alien spray. She obliged. He told her to call if they returned. Next week she called and asked for the same officer. He responded, and asked if the spray was not working. She replied that it was working fine, but they were now landing on the outside of the mobile home. He had to spray the outside for her. She never called back.

Sure it is. You dont think throwing a couple of resistors and a few lengths of wire into
a package and selling them for ten times their worth is an advancement??
You must need a vacation, Ron...

> a mod is a mod. Many are common knowledge and he has not discovered
> anything new he simply printed them in a book and made it available
> for others for a price.

Make that three books, with the rinds of them no doubt being squeezed to a pulp in an effort to extract a fourth. As for Cheeks discovering nothing new, well, you've got me there. But I understand he's working on a hush-hush project that involves being able to control ones refridgerator temperature from your scanner!! (True, he has'nt been able to get the computer out of the equation yet, but imagine the possibilities!)

> "technical ability"? I am yet to see any technical ability.

Yes. Well, give Cheeks a chance. Just this morning I was reading in the Wall St. Journal that the smart money is going into the scanner industry in the new millenium, and I would be not at all surprised to find Mr. Bill Cheeks leading the 21st century'brat-pack' of scanner hackers.

Hi, I am interested in hearing from everyone who owns an AR8000
or AR2700 scanner. I am thinking about building and selling
a computer to radio connector in the $75.00 price range (including shipping).

I have had some experiance selling kits for DTMF decoding ($35.00),
and an ATOD decoder ($30.00) which fits in the same size case as the
AR8000 INF. If anyone is interested please send me an E-Mail and I will
put you on a list. When (and if) the product does become available, I will
contact you by E-Mail with a special discount offer (around $10.00 off)
if you help with information..

Also, does anyone know how many AR800, AR2700's are sold in the USA?
I need to know what the market would be before I spend the $$$ to have
boards made etc.

Would an interface in the $35.00 range be of interest if it required an
external 9 volt Battery?

Would anyone be interested in an interface with a built-in micro-processor
in the $99.00 price range?

Any info you can give will be a big help!
Thanks, Gary.

> chief that says are conversations are private etc etc...

Here are my first impressions of the above posting. IMHO, llpix's media staff are pretty darned lazy. Whatever happened to the art of investigative reporting? Why isn't someone assigned to LISTEN to the trunk system, instead of simply expecting PD/FD to hand them their stories on a silver platter.

I live in a city with a very active trunk system. There IS a lot of junk on it, such as trash collections and building inspections. Yet I can't conceive of missing a murder or major fire or big accident. These things aren't five-second dispatches that vaporize after they're dispatched. There's lots of follow-up traffic, such as request for Medical Examiner, fireground operations, road closures for traffic control, etc., etc.

If your media remains clueless, llpix, face it -- they just AREN'T LISTENING. And THAT is not PD/FD's fault.

I am really tired of hearing only 1 part of the conversation on my 2500xlt when I have to scan 1270.000 to 1293.000....I have a mod sheet and it calls for modifying one of the 5 SM resistors and placing the farmost left one over to the left again...There are no holes in the PCB for it to be seated..It also says these resistors are located under the IC Chip marked "Uniden UC-1513A" mine is marked "Uniden UC-1513B" Do I have a non-modifyable scanner? Please help as the BC200XLT I had, believe it or not, lost its sensativity and I have no clue as to how to fix it either.

I need to listen to cellular! 8*)

TAke it from a news seeker who has to listen to trunk systems
for two very large police/fire/ems/dog catcher/divers/street/
city sewer and more.......

The description above....t.v. and radio and newspaper and wires
do what is called beat checks. Usually on the hour. They make
rounds calling to find out from desk sergeant what has gone down
and they ask the sergeant questions such as: any fires, any 187's
or any fatal acc's or any chem spills...

The sergeant builds up a feeling for what the press wants when
as soon as they call he reads them the good stuff. A lot of
times there will be a double 187 which does not get mentioned
because the detectives are still at scene or may not have gotten
there. No info gotten except location. BUt there may be serious
circumstances: like the suspect is still in the building and the
watch commander says not to give that info out.

Eventually the suspect is caught and the W.C. gives a release and
it is filed. Some agencies send faxes out to the media. Well-
prepared and simple facts about what they are working on. But
the faxes go out when the watch commander ok's it....that can be
hours later....so they control the dissemination of info.

Listening to trunked on the scanner...well, there are ways to
increase likelihood of hearing the essentials. If it's only
one dept on that trunk...calls can be made to pd to find out
more by any accredited news agency.

A lot of times the scenario is : "we are not aware of anything like that happening right now"....this tips me off to go find it. It's happening, they just don't want the press to be alerted to it...where it is....

Cops don't like dealing with the press before they are good and waxed down ... while an event is going down, it's "two blocks back and don't move". they always invent some reason for the Press not to be allowed in closer.

But if you are worth your salt, you will find a way to get closer to be pic's of the scene. I can tell you stories of being told to keep back...yet, I found a way in and got my pic's or video. And if they catch me, they escort me back to the line. Most of the time the officer who told me to stay...he's gone to another location and no one is the wiser.

not being given access because of trunk....right!

Learn how to really program the scanner and some other secrets I don't share with anyone . You just have to "create" opportunites as you go along.

Sure, I miss some news stuff, but it's because the cops go to cellular for the real nitty gritty details. Or the location has been pre-assigned due to prior "spotting" ... so all you hear is "location alpha is secure".

Just think of all the posts people are going to be writing when digital radio is adopted....it's getting closer as new technology is being readied for sale....to city pd depts. who now can afford it....remember:

One city can buy the broadcast center and get surrounding cities go come on down and join in for a fee and radio costs to start....one system shared by many because it's just o's and x's the computer is dealing with....

next voice you don't hear is on digital radio....

>Cheers,,,,,Jack.

It does not seem that way. I lived in NH for 6 years where links were
very popular and this just 'does not seem' the same.

460. 625 / 94.8 is used to retransmit ALL traffic on the Bucks County
Fire 'South' Band of 46.20 AS WELL AS ALL dispatches from 46.10!
I can hear this 460.625 site for about a 60 mile radius!! By the way,
the 46.20 traffic overrides the 46.10 traffic when they conflict.

460.5875/97.4 is used to transmit all traffic on the Bucks Count
'East' band of 46.06 but does not transmit any 46.10 dispatches.

506.3875/100.0 is used to transmit all traffic on the Bucks County
'West' band of 46.12 and again does not repeat dispatches from 46.10.

460.600/141.3 is also in use by Northampton Fire Stations 3 and 73 but
does not seem to repeat/link anything yet - just lots of chit-chat.

Yes..I have had the system for afew months. Not 100% satisfied with
software but the company makes upgrades available on the above site
from time to time. It is getting much better.
My main complaint was that you could not alter settings (squelch ,
volume etc) without quitting scan mode...that has been fixed in a
recent upgrade. I was originally pissed with it and have to admit that
I have not had a lot of perserverance. For instance , it is very wide
band and is dependent on antenna selection....I have not experimented
as much as I should have. The supplied antenna works fine on HF but
lacks sensitivity on VHF and , to a much greater degree , on UHF.
My Icom R7100 is far superior as a receiver on V and UHF...but ,
hey..it cost about 4 times as much.
Anyway, if you buy, keep your software up to date by watching

Rosetta's Website.

I remember going to a female's house one night to take a report of a theft. What was stolen? - two slices of bread, a slice of ham, slice of cheese, a few pickles, and some manyase. It seems the burglar made himself a sandwich then left :-).

She also wanted us to eradicate the home of the racoons, which she said lived under her daughter's bed. A quick inspection with my flashlight revealed a large pile of moth balls, but no racoons.

I advised her to keep a large pile of moth balls under each bed and replace the moth balls with new ones every month.

We did not receive any other calls from this subject.

> -=I AM NOT RELATED OR ASSOCIATED IN ANY WAY TO ANY GOVERNMENT, STATE, OR
> CITY ORGANIZATION=-Hi,yes the BC3000 is a fine choice of a scanner. In a quick comparison
between it and the Radio Shack PRO-26, the BC3000 has a better designed
800 MHz band front end(receiver signal input section), it has better
shielding on it's printed circuit boards than does the 26, and it's
operating syntax is somewhat simplier. The only significant downside is
that it uses a custom battery pack, where the PRO-26 uses discrete AA
cells. Although some folks have commented on the 3000's squelch circuit
operation, my experience with it has been fine, in fact it's
performance is one of the best, particularly in it's stability with
mobile signals,especially when receiving 800 MHz band stations.

Does anyone know if there is any software available on the net that will allow my bc 3000 scanner decode data signals? Such as pager signals, ctcss data etc etc etc.

I especially would like software that doesnt require an interface so that the program will read the scanner sounds perhaps through a mic or something.

I have a soundcard and speakers.

Many Thanks

Matt

4032. What is the difference between a scanner and a shortware radio?

Newsgroup: rec.radio.scanner
Date: 1996-07-26 00:00:00 UTC
From: Paul Mahler <pmahler@databased.com>
Message-ID: <31F90192.7EAB@databased.com>
Source record: 228675

If a scanner covers the same bands as a shortwave radio, what will a short wave radio do that a scanner won't, or what will a scanner do better or worse?

Thanks!

MA>tape is not a good seal...better choices are...
MA>1.silicone sealant
MA>2.coax-seal
MA>3.the special type of heat-shrink tubing that has a flowable
MA>lining(probably the best method).

All those are very good, but expensive for a one-shot repair job. I
love heat-shrinkable tubing...but the size for coax isn't available
everywhere.

A less expensive, just-as-good weather seal, is an inner wrapping of
rubber tape (the uncured kind, still found in do-it-yourself stores
such as OSH, Orchard Supply and Hardware). Over that, wind friction
tape (the old sticky-cloth kind, also available at OSH and others)
under tension, covering the inner rubber tape ends. I've operated
VHF and UHF r/t in the U.S. Army that way and the wrappings have been
true even when immersed in water.

A tear on any coax cable's outer insulating jacket doesn't affect
sensitivity or anything else. The jacket covering is there primarily
to keep the outer conductor from corroding.

Yep. It's also stiff and more prone to damage the radio's BNC connector
and/or circuit board if stressed.

You can purchase new knobs which are a lot harder and the inside walls are thicker from EDCO for about a dollar a piece. Don't use glue...You'll never get them off and there is oil leakage from the shafts.

>Regards, Jim

After following this thread for some time, it occurs to me that
people are losing site of one very important thing about trunking, it
is fairly new and as with anything new a lot of people do not like it
because they can't use it! If enough people complain loud and clear to
the scanner makers about this problem of not being able to follow
trunked systems, they will find a way of providing scanners capable of
making our enjoyment of such to come alive. Also the same is true for
digital transmissions. Thanks to greed, high demands are always meet
with supply. For those who say the company that owns that
technology will not share it, is correct!, but they will lease or
rent the use it if the money is right.

:-) Buddy

Please shut up with this injured-ego-of-the-past nonsense. If you
can read English, you've seen that more and more folks in this forum
don't give a damn about your alleged feud.

For what it's worth, I spent all of my working career as an
electronics engineer doing both system and circuit design without a
degree, managed to get a patent (sole inventor, assigned to RCA
Corporation). A degree diploma is no guarantor of knowledge
excellence, nor is the ability to copy 15 WPM a guarantor of inside
knowledge to electronics. I want to learn more about hobby stuff,
such as scanning...I've spent years and years listening to other
injured egos, selfishly centering themselves in their own universe,
oblivious to the fall-out irritating the hell out of those of us who
were content with getting the job done. Pfui on this feud, take it
ELSEWHERE.

Source record: 228495

How many scanners (new/old) are bought on a daily bases???

How many newbies enter this hobby, again, on a daily bases.????

People yearn for knowledge, all types of knowledge, thats what makes us tick. Problem is, were very limited at gathering this knowledge.

Bill Cheek presented an FAQ on a product that allows a computer to do some interesting stuff to a few high end scanners. Im sure a Lot of people (Newbies) did not know this gizmo was available, or how it could aid them in there scanning enjoyment. Now they know. If it has helped even one person further their scanning enjoyment, Great, no?. If you had read his FAQ before or were aware of its contents,YOU choose to either re-read it or skip it.

Bob Parnass has posted Many FAQ's for the benefit of newbies getting into or ABOUT to get into this hobby. Great stuff.

Nothing worse than plunking down several hundred dollars on a scanner and finding out its Not what you really wanted. Can't do this, won't do that. Thats what FAQ's are for. Bringing people up to speed. Informing them as to whats out there and at what cost.

I have read Bobs posts, and have gained some interesting knowledge. Now when I come across these particular FAQ's, I Choose to skip them. I am aware of there contents. I dont mind them existing, others are looking for this info all the time. The same is true for the computer/scanner interface Bill offers. People are seeking information on this particular subject daily.
So we Need to let this knowledge exist, else we hold others back.

I have only the 5 senses that God gave me. Problem is none of them work all that well. To top it off I have pride,ego,emotions that really haze/filter between what really IS and what I see or choose to see.

Look guys, you,ve all brought your scales to weigh out each others bag of marbles, problem is, no two scales are the same and the bag of marbles?, well the count is in a constant state of flux. You'll be weighing and re-weighing for a long, long time. Save yourselfs a very lengthy learning curve, cus in the final analases were here only a short time. No?

- Nothing ever balances -.

Lets keep the knowledge readily available to any and all that seek it and void of filters/measurments. Period. The search for knowledge itself, will take care of the finite checks and balances.

Andrew.

Hello there,

I have a faulty Uniden Bearcat 200XLT (no mods) which I thought somebody may be able to help me with. Symptoms are:

- Nil audio output, even with squelch wound right down. Not even a hum from audio amp circuitry. Speaker DEAD!

- When scanning through channels, and squelch is wound right down channels continue to be scanned (ie: squelch circuit not working)

- LIGHT function not working

All these symptoms just appeared after the unit was not switched on for a couple of months.

Hoping someone may be able to help. Please post/e-mail any suggestions. Many thanks in advance.

Regards,

Adam

I'm in the somewhat unusual position of having been on both sides of this issue. I now work with a law enforcement agency, but in the past, have been involved in the media as, among other things, a radio station News Director and a radio General Manager.

The fact is, when a government agency decides to switch to another radio technology, scanner enthusiasts and the media are both at the bottom of the list of reasons for doing so. Nobody cares if people listen to their scanners. The only people who see a "plot" to prevent scanner listeners from hearing police broadcasts are the scanner listeners!

As for the media, its job is to report what happens out in the real world, and that involves monitoring police radiocasts. If the police switch to a different system, it is the media's responsibility to find a way to do its own job. The police department doesn't give a rat's *ss if the local papers, TV and radio stations can or can't listen. The newspaper or station that wants to be able to stay competitive will purchase or lease the necessary gear to be able to do the job.

Everytime I've come across a law enforcement agency that's thinking of changing radio systems, there are usually two reasons for the change...financial efficiency and ease of communicating. I was once involved with a small city where the police often had trouble communicating with portable radios. An officer out on portable in some areas of the city could only be heard by other nearby officers. This is a dangerous situation. The city had two solutions available to it. It could switch to a repeater system in which portables would put out the same strength signal as the dispatch center's base station. The second solution still used a repeater system, but also utilized a change in frequencies to eliminate sharing a main band with several other area departments. The city opted for the second solution. It had nothing to do with trying to "foil" scanner enthusiasts and the media. It was simply a matter of better, more efficiant communications.

Many areas are switching to trunked systems to make more efficient use of the radio spectrum. With trunked systems, more agencies can use fewer frequencies without each agency listeneing to the other agencies' radio traffic or having to wait for the channel to clear.

A "plot" against scanner enthusiasts? Look at it this way... scanner enthusiasts listen to police communications for fun, for entertainment, for diversion. Police officers listen to police

communications as their information lifeline. Who do you think should carry the weight in decisions to
switch communications systems?

Oh, sorry. It was a long time ago so I didn't even
think it mattered. The officer had a small scalp cut. I
never found out if it was related to the pursuit or if it
was an accidental injury.

4059. A Story of Petey Joe Boe

Newsgroup: rec.radio.scanner
Date: 1996-07-27 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <31f99920.38027194@192.188.72.19>
Source record: 228502

Listen, my friends, and I shall tell you a short story of the schizo-freako-paranoidal-hermaphrodyte fondly known as Petey Joe Boe (PjB). I repeat this story from memory as it was told to me by Captain Larry of "The River Dragon" fishing boat.

Now this lad, Petey, lives in Portland, Oregon, not far from the banks of the mighty Columbia River. Being an out-of-work piano teacher and in desperate need of something to eat, weary of a diet of Depo-Provera and Prozac, the fine strapping Petey found himself down by the river applying for work in the fishing fleet.

Much to his relief, the fine Petey was immediately hired, but because of no experience in the fishing industry, he was required to start at the bottom of the ladder as an Apprentice Baiter at minimum wage.

Not content with swimming around on the bottom of the barrel, the lad Petey learned about anchovies, cut mackerel, chum, and hooks, so that within about six months, he was advanced with a double-pay hike to Journeyman Baiter. His mother was so proud!

Thusly inspired and proud of his handiwork, the magnificent Petey got down to serious work with the arts and sciences of baiting like there was no tomorrow. Surprise, surprise, surprise! Three months later, the boy Petey achieved his crowning glory as he was elevated to the highest rank of all, Master Baiter.

Bravissimo, Boe! Way to go! <applause> <applause> <applause>

.....
.....<pausing for more applause>.....
.....

In another installment, if interest warrants, I'll relate the anecdote of how Master Baiter Boe got cured of a monstrous tapeworm.

Some do pay alot. That is why this group _must_be kept free of commercial
content, ala Bill Cheeks. Think about it; when you read one of Cheeks
thinly veiled ads, you are PAYING for the privilige of doing it! We dont
have to PAY to read ads! The mags and newspapers are full of them. And yet
Cheeks thinks that we, dumb-ass hobbyists (his words) that we are, will
fall for his simple ploy to market his gadget if he slips a little of his
(much recycled) data into the mix!
I submit that the readers of this group are not dumb. Hobbyists,
absolutely. But dumb? No.
Dont be deceived by this shyster. He wants your dollars and he sees this,
our forum, as a convenient way of getting them. KEEP THE PEDDLERS AND
SHYSTERS OFF THE NET!

Well folks,
I am new to the internet newsgroup thing and I am starting to wonder if I should drop this particular newsgroup. It seems that there is a running arguement among several people (bill Cheeks, pjib, and others). I know who Bill cheek is. Sometimes he gets angry and the flame flies, but not often. Sure, like the rest of us, he makes mistakes (he is, after all, ONLY HUMAN).

If all of you are going to do is argue, why don't you take it to ALT.FLAME, or E-MAIL? I would rather read some commentary on scanners and related issues, not FLAMES! Now, Either shape up, or get outta here! I don't want to deal with this flame any more.

Now that I have said my peace, I will lurk a bit...

I am replying less and less, but are the flamers posting less and
less? Hardly. Do an experiment for a minute - use your software to
sort the newsgroup headers BY AUTHOR and then go near the top of the
list to:

<hduff@hcol.humberc.on.ca> and count 'em!!! Then:
tvine@teleport.com (PjB) and count 'em!!! Then:

Do the same for Mackey and Alexander. Examine the sum and substance
of each, if you dare. Get a concept of the BIG picture..... Take
into account the forgeries of my name by "TeePee" and Company.

> The tone of both the guys who flame Bill and Bill's responses are
> inappropiate for the newsgroup.

Be that as it may, what's to stop it? Suppose I choose to stop. You
think that is going to stop Duff, Mackey, Pacan, and Boe from spamming
the goup? Duff makes himself very clear that he's on a "mission".
Mackey posts from an anonymous server with a FAKE address. He and Boe
(PjB) have NEVER contributed anything to this forum. Look at the post
ratios of Duff and Alexander, too..... 10:1 flames versus substance.

See, in a word, you and a few others are asking me to ignore 'em. Ok,
but YOU didn't ignore and you're NOT personally affected. So it must
have been very difficult for you to keep ignoring it. Can you then
imagine how much more difficult it is for me?

> Do Cheek, Duff, etc. feel it's fair to the others who read the newsgroup to
> post all this stuff?

Fair? Fair like we're playing in a sandbox and have to divide the
toys equally? Fair like there's a pile of M&M's to be given out and
each gets the same number? Whoooooaaaa.....I dunno.....

I do know that with a computer, YOU are under full control. No one
can make you do anything you don't want to do. What's more, by
learning more about your computer and software, you can control
everything that comes into your system. Sorry....I don't think "fair"
is a good term to apply here. You have the power to make things
"fair". If you relinquish that power to others, that is only a matter

of your choice.

> Remember, some have to pay alot to have internet access.

There is NO INTRINSIC REQUIREMENT to pay "a lot" for access to the Internet. There are options; some of them very low cost. I certainly sympathize with those in rural regions or lightly populated ones where there are no (800) connect lines and no local ISP's. On the other hand, I -=wish=- I could get out of Southern California and relocate into the backwoods somewhere. I envy the "hicks in the sticks."

The majority of people get very low cost access to the Internet. The few who don't are just in that position for a variety of reasons, some maybe by choice. This minority should not be the subject of catering and special attention, though.

This is not to say that your wishes and points are invalid. You're just in a position where it is very easy to see me as the solution to your problems. But I am not. Not your internet problems, anyway. Maybe scanner problems.

And if our fine-feathered colleages Mackey, Duff, Pacan, Boe, and M.Alexander would leave me the hell alone as I would leave them the hell alone, then we could get on with the business of scanners and scanning, which is what I see this newsgroup STILL being all about.

Making no bones about it, though: the STATED and well defined objectives of Mackey, Duff, Pacan, Boe, M.Alexander, and Company are to "run me off the newsgroup". THAT, sir, takes it a cut above mere "flames" which....I agree....can be ignored. But can a vile, nasty mission like theirs be ignored? Can I dutifully ignore the stated fact that they won't rest until I am gone?

Please think about that. The subject is loaded for bear.

>> it. Do you think I'd use that sort of language only by alias ? Hahah !
>> Not in me dudes ! Someone here is playing games...'taint me
>> but think whatever you like.

Very interesting that you pretend to not know "Tim Pacan"
(teepee@hcol.humberc.on.ca) with whom YOU share a web page!!!

Let's take us a brief look-see, Mister Duff:

http://halifax.terraport.net/teepee/title.html (Tim Pacan)
http://halifax.terraport.net/teepee/main.html (Tim Pacan)
http://halifax.terraport.net/teepee/va3to.html (Hugh Duff)

Do you deny that VA3TO.HTML is your page, and that it is under
"teepee's" page, and that you both are hams, and that you know HIM?

That sure seems the impression you've been trying to convey, sir.

The evidence is becoming overwhelming that "teepee" is the forger;
therefore, there is strong reason to think that you share some level
of complicity with him. In fact, since he doesn't normally post here,
it might be that YOU put him up to the forgeries....or even used his
account when he wasn't looking.

I sure don't know this Tim Pacan a.k.a. "teepee" from Adam, and one
would think he had no quarrel with me......contrary to YOU, picking
fights with me for a year now.

Very interesting information that's turned up, Mr. Duff. Eh?

Tick.....tock......tick.......tock........

I have one I would sell for $175.
I got a ar8000 and Scout so I really dont need it. Really I agree with
Mike, You have to experment with ants and filters to hear a select
freq range. It is neat if you don't have the cash for a 8000 and
scout. If you are around FM, TV and pagers you will lock on them and
have to push the search button to resume. I used it to set deviation
of repeaters and stuff like that too.

In the spirit of the olympics, let's do some scorekeeping.

Bill posted a FAQ that had some useful technical information.
That's five points to Bill.
Hugh says the FAQ also had an element of commercial self-interest.
Five points to Hugh.

Bill says there was nothing rude or inflammatory in the post, yet Hugh attacked him. True. That's five points to Bill.
Hugh says Bill's response was crude and an escalation of the ill manners betweeen the two. Also true. Five points to Hugh.

Hugh says Bill is exaggerating his credentials. Bill cites some relevant credentials but declines to say where or when. No decision on this one.

Bill says there are lots of commercial people in the newsgroup, so why pick on him? But he doesn't name any. Sorry, Bill, no points awarded unless you can tag someone.

Bill takes shots at people on medication. No points for Hugh, but Bill loses five for bad sportsmanship.

Spoofed messages arrive from Hugh's part of the world. No points off Hugh, but Bill gets five in sympathy.

Is there a message here folks? Yep: the message is, this isn't a competition, it isn't an olympic event, it's a newsgroup. A nice, otherwise friendly newsgroup. There is no reason to compete. In fact, there is nothing to be won. No one is bigger here, or stronger, there are no little pink bunnies that outlast evil battery-powered dragons. We all know *something*, and we all deserve to contribute equally. No one has higher, or lower, stature, even if they know more, or less, about radios. And you don't help anyone by arguing about who is the bigger expert, or the bigger asshole.

One last thing. Life teaches that people rise to the top not because they know the most about radios, but because they know the most about getting along with other people. That means manners. Each participant loses five points for each time they mentioned a bodily fluid, or an act of copulation, or the ingestion of personal apparel. (Take off your shoes and count backwards on your toes if you have to)

And to all of you who have remained silent throught this childish and repulsive episode, thank you. You are great people.

Regards
Paul

Hugh also called Bill some not-nice things. (Personally, I agree with what he said, but that's not the point. Newsgroups don't work if people get personal.)

Bill returned fire. (OK, Hugh might have been out of line, but an angry Bill is simply crude. Not a good debator, not a kick-butt fighter, just a crude boor)

Things went downhill (Considering what went before, is this a surprise?) Other people joined in the fray. Some like Bill, some don't like him one bit. (Probably I could

Now we have a debate going about a) who hit who first,

My humble opinion:

1) Bill Cheek exists. Learn to live with it.

So, guys, what now?

OK THIS HAS ABSOLUTLEY NOTHING TO DO WITH SCANNING. TAKE THIS OFF TO
PRIVATE EMAIL AND STOPPING CLOGGING UP THE GROUP. SOME OF US WOULD LIKE
TO TALK SCANNERS AND NOT HAVE TO WEED THROUGH THIS SHIT.

John Mackey, KA0SSF (no.address@anywhere.com) wrote:
: Bill Cheek wrote:
:
: > Alas, PO boxes aren't all that great. A certain government agency IS
: > involved, though, as well as numerous ISP's and other key people in
: > the network. Mister Mackey is not sitting very pretty at the moment.

: Oh Bill come on get off of it. I am not as dumb as your Fidonet
: groupies. There is no way in hell that the government contacted you
: wanting to know how to find me. (Even PrB said you like to use that line)

: This is why:
: I am registered to vote.
: I have a drivers license.
: I pay taxes to the Feds & state.
: I have a license by the state & feds for a (recently) former profession.
: I have 2 FCC licenses (my ham license was pointed out previously)
: I have vehicles registered in my name
: I have a state issued handgun which required an FBI check

: THE GOVERNMENT WOULD HAVE NO PROBLEM FINDING ME, YOU ARE A LYING FOOL.

: Surely, you don't think I would believe *YOU*. (especially with the
: way you lie)

: Hell, your tagline on Fidonet is a huge lie. (about you being a Win95
: MS adivsor)
:
: > Can't help it for the time being. Hang in there.

: This morning you wrote a message saying "fuck all you people" and
: something
: like "I've had enough". It sounded like you were leaving.

: Oh yea, get it thru your head. I DO NOT HAVE AN INTERNET E-MAIL
: ADDRESS. I only have a Fidonet account (you SHOULD remember that)
: & I have NO intentions of getting an internet account. You & your buddy
: can go ahead & contact all the ISP's you want by looking at the paths of
: these messages. Have you ever heard of an anonymous news server??? (DUH)
: I am really impressed that you guys figured out how to read thru a unix
: box or enable headers with your browser. (I believe you are running
: Netscape 3.0 beta 4 or 5, I can't remember for certain) Maybe next
: you'll

: learn how to set up an NT server on release 4 or something a little more
: cutting edge like that.

: Maybe we should contact YOUR ISP about your behavior here saying,
: "FUCK all you people". It wouldn't take much to finger your ISP
: and find out who the system admin is.

bcheek@cts.com (Bill Cheek) wrote:

>Wrong! The SCANRADIO conference is healthy, alive, and well, now that
>Mackey, Duff, and company are gone. Check it out sometime.

I do, regularly. In the last two weeks the volume of posts has
dwindled to a half dozen a day......down from 50 or so a day when you
took over.
IMHO the participants are sending you a message.

>You want good scanner information? Well, I have the capacity to post
>gigabytes of it here. But why should I? I did nothing to Boe, Duff,
>Mackey, Pacan, Alexander, and Company to warrant their mission to get
>rid of me. But that's their aim. As long as YOU (the participants of
>this newsgroup) PERMIT their mission to move along, then I will be
>handicapped in terms of posting anything MUCH of anything useful.
>They denigrate everything I post as it is - spamming up the thread to
>where no one wants to read it.

Ah....you have reached the heart of the matter.....what can WE (the
participants of this newsgroup) PERMIT????

WE (the participants of this newsgroup) certainly don't want to PERMIT
the likes of Mr. Duff to slam people without impunity.....but what do
WE (the participants of this newsgroup) do when a participant
oversteps all bounds of taste or civility? Are you saying that WE (the
participants of this newsgroup) can take action? Do we have the
capability to PERMIT some things and FORBID others? Up until now,
you've told us that all we can do is tune such people out, use our
kill files or whatever to ignore their posts.

It's a two way street, Bill.....if WE can take action against their
behaviour when they deserve it, WE can take action against your
behaviour when you deserve it. Are you ready to accept our judgement
of your behaviour?

>Don't you see what is happening?

Yes, I do. It's called "Do as I say, not as I do".

Personally, I would prefer to forego those gigabytes of marvellous
posts you offer, if the price of admission is giving you the license
to act as crudely as you like when someone takes a shot at you.
It doesn't matter who started the dispute. There is a minimum level of
behaviour that should be expected from posters, even if others are
attacking them. You seldom meet that minimum.

Regards
Paul

If the scanners happen to have headphone jacks the easiest way to do
this would be to hook the outputs on the scanner to the inputs on
speakers that allow multiple inputs. I think that all of the Altec
Lansing speakers that are normally used with a computer's sound card
allow 2 inputs.

4085. "TeePee" is the Forger?

Newsgroup: rec.radio.scanner
Date: 1996-07-27 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <31f9a8f9.42084949@192.188.72.19>
Source record: 228528

To: All

Question: Is TeePee <teepee@hcol.humberc.on.ca> the one who forged and posted vulgar, provocative messages in my name? Let's look at two headers for a moment, one from a post by "teepee" and the other, a forgery. Observe the PATH, NNTP-Posting-Host, AND the X-Mailer lines in the below headers. Also note the Organization line, too. Even more interesting is that the forger posted a second forgery before he had the presence of mind to change the Organization line from Humber College to my company, COMMtronics Engineering.

There are at least four forgeries in my name, the first two of which have Humber College on the Organization line and the other two have my company on the line. This suggests an afterthought on the part of the forger. The "fingerprint" sure smacks of "teepee" to me, and if true, then this raises questions of complicity by the better known Hugh Duff <hduff@hcol.humberc.on.ca>, for the simple reasons that Duff has been trying to play innocent of knowing "teepee" when in fact, lookee here:

http://halifax.terraport.net/teepee/title.html (Tim Pacan)
http://halifax.terraport.net/teepee/main.html (Tim Pacan)
http://halifax.terraport.net/teepee/va3to.html (Hugh Duff)

We see that Hugh Duff shares a Web Page under Tim Pacan's page. Both are radio amateurs, obviously they know each other, and clearly have some affinity for each other. Proof? Maybe not, but the questions are there, valid as a smoking gun.

You guys tell me, after looking at the evidence (and I haven't shown it ALL by any stretch of the imagination!).

EL>Ed

The knobs suck. The on/off/volume wears out the fastest. Rotate the
knobs around. When the whole set is bad, you can get replacements
for a $1 a knob. Me, I just gave up for now and let the radio
go naked.

>
>(Think about this one. If her friend is far enough away to
>worry about the travel costs, then how much has an hour long
>phone call over this distance just cost her. I suppose this
>is femanine logic at its best).

That's pretty sexist. Maybe the other person called her, and that other person is well off?.. Maybe this person the woman was talking to was visiting the area, they were talking locally, but she was about to fly away to her distant home? Maybe this woman got some free long distance time somehow?... In the US, you can get a 10 cents a minute rate nationwide... including Hawaii and Alaska. (and even cheaper) That's $6.00/hr. Quite a bit cheaper than flying from Hawaii to Washington, DC, eh?.. Sounds "logical" to me.

It's pretty unfair to make judgements like that about people... especially when you are illegally invading their privacy.

It is most useful when there are relatively few strong radio signals
around, since otherwise the unit keeps locking onto pagers, FM and TV
broadcast audio, etc.

Well, let's see how best to answer this, vince.

Stand up and face the wall.
Lift your left hand to eye level, palm towards you.
Lift your right hand to eye level, palm towards you.
look at your left hand, then look at your right hand
Your left hand is direct current.
Your right hand is light.
everything in between your left and right hands is the electromagnetic
spectrum. When someone says they can recieve everything from dc to
light, it means that they have a VERY good radio reciever :-}

I overheard a Search & Rescue operation here in Phoenix where one of the Phoenix PD's NOTAR helicopters equipped with FLIR (Foward Looking Infrared) was called in to help look for a missing hiker after dark. One of the officers noted over the air that the FLIR would find him...unless he had "assumed room temperature..."

I recently heard a dispatch for a "young woman disrobing by the side of the road."

Another was a call for an officer to respond with all the handcuff master keys to a local elementary school. It seems some 3rd graders had found a pair of handcuffs and had handcuffed themselves together.

While working as a CO for the Maricopa County Sheriff's Dept. Ham Radio Posse during a graffitti sweep, we got a call for a stolen vehicle. The car had been stolen about 300 feet from our mobile command post! How embarrassing!

I have heard some "hairy" calls too,

One was a mayday from a San Diego Sheriff's Dept. helicopter which pranged shortly after. Fortunately no one was killed, but the officers inside were injured and the helicopter was a total loss. The helicopter went down two blocks from my brother's apartment. We heard it as it happened and a good 20 minutes before it was on the news.

Another was a commercial jetliner that diverted to William's AFB when it RAN OUT OF FUEL IN FLIGHT! The aircraft landed fine, but the passengers and the press were lied to. Local papers reported it as a cautionary diversion, but they landed with no fuel and no thrust!

Also while a CO for the MCSO we were monitoring stake-out chatter when we heard an officer yell something unintelligible into the radio and then heard many "Ooofs" "Ahhs" "Grunts" as well as thuds as several radios were being keyed in a scuffle. Then silence. About 30 seconds later we got a call for an officer requesting medical assistance....for the perp. It seems a drunk had taken offence at a local restarant turning him away after closing. He had picked up a newspaper rack and had thrown it through the glass front of the restaurant. Unfortunately for him, he had done it in front of 4 MCSO officers in an unmarked car.

|
| They sure do.
|
| > if so, what band ?
|
| Most are around 170 MHz, just below (US) TV channel 7, in
| the same area used for remote microphones that the police
| use to pick up audio for their automated videotaping
| systems in their cars. I'm sure there are some that use
| the ISM bands around 900 and/or 2400 MHz, as well.
|
| > Are these decodable ?
| >
|
| Most of them really aren't, since they use OOK (on-off
| keying) with such short "on" times that most frequency
| counters, Scouts and the like won't even detect their
| presence. There may be more advanced units that transmit
| a continuous carrier modulated with tones, or the like,
| that would be decodable; however, most garage door openers
| on the market don't use such techniques.
|
| -Will Flor willf@rrgroup.com

Garage door openers, remote key chains and remote lite switches
operatre on 303 Mhz.
```

K. Bailey Is right on target. The unfortunate reply to his post is
merely another flame.

I am unsubbing this news group for now... seems all the adults have left
the group and only the adolescents are posting.

Bye.

4102. Re: Police Codes

Newsgroup: rec.radio.scanner

there are the national APCO -codes, but even these will differe from one agency to the next...example Arizona Highway Patrol uses 10-15 for papers/package/paperwork...Maricopa County Sheriff uses 10-15 for subject under Arrest.

some codes like 211, and 459 are almost universal though

JOHN/PHX (jamoran@analon.com) computing & making good Chemistry!

Sorry, you are out of the window for Cell....but you *WILL* get the other
out of band freqs 66-88Mhz (I think)

See attached posting or visit my home page for many other links to TONS of
scanner links....

The following was taken from a Regency scanner
manual, dated August, 1974.

NOTE: Mobile reception of a POLICE frequency by UNAUTH-
ORIZED personnel is ILLEGAL in some areas. It is the responsibility
of the person making the installation to be sure that the user of this

receiver is authorized or cleared through the local Police Department.

Under no conditions can Regency Electronics, Inc., the manufacturer
of this set, be held responsible for it's unauthorized installation or
use.

That just about says it all, doesn't it folks?

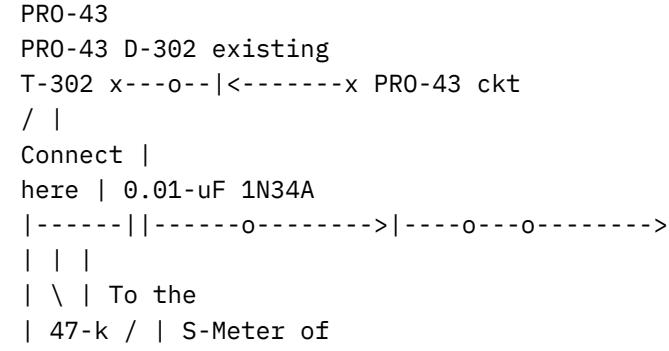
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and
well in the PRO-43! Only a simple circuit and your choice of meter,
analog or LED, is required for a jim-dandy S-Meter function!

The key point in the circuit is the cathode of D-302 located on the
bottom (solder side) of the AF Board (middle board). You will need
the Service Manual for the PRO-43 to find it as it's not marked and it
would take me 10,000 words to guide you to exactly where it is
located. Call Tandy National Parts at (800) 442-2425 to order your
manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the
back of the AF board in the vicinity of D-302, or solder a wire to the
cathode of D-302 and route it to somewhere else more convenient to
feed the below circuit. This wire ought not to be very long, though,
say not more than a couple of inches. Refer to the ASCII schematic
diagram as follows:



```
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o-------->(-)mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar,
| monolythic, or chip

2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode

3. o means a connection, preferably soldered

4. The 47-k resistor is self-explanatory, I hope.

5. -------- and | are wires/conductors.
|
|

6. x is existing PRO-43 circuitry
```

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:

```
5-k Trim Pot
(+) --------/\/\/\/\---o--------|
| | |
This should |-------| |
be a plug of +
some sort to The S-Meter
connect to the Terminals
mating jack on -
the scanner |
|
(-)----------------------------|
```

You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Wrong! The SCANRADIO conference is healthy, alive, and well, now that Mackey, Duff, and company are gone. Check it out sometime.

> and is doing the same here.

Yes? Well, they're here because they can't be kicked off.

> Some people just want to check in and
> get some useful info on scanning.

Me, too. I like that very much. Except that there is almost never any real useful information on scanning here.

> I, among others, am tired of
> of having to skip around all the crap to get to the good info.

But that is easy to do. You don't have to "put up with anything" here. Why do you think you have to?

> This is a discussion area of a technical, intelligent nature, yet
> is filled with this immaturity. I am traveling the information
> superhighway, and there are a bunch of jerks stopped in the
> middle of the road arguing. It does not matter whether all of them
> have college degrees or not, they are holding back the rest of us.
> So, for the sake of all that is good, shut up, get back in your cars,
> and get the hell out of our way!

<Chuckle> Ummmmm, the Information Highway is not a two-lane thoroughfare. It's a zillion lanes, and you can choose to swerve or have a head-on crash with no REAL impact either way. Regardless of the perceived problems with this forum, the simple matter exists that all around you will be people not living up to your high standards. You are going to find obstacles everywhere if you look for them.

You can choose to crash into them or to veer around them.

You want good scanner information? Well, I have the capacity to post gigabytes of it here. But why should I? I did nothing to Boe, Duff, Mackey, Pacan, Alexander, and Company to warrant their mission to get rid of me. But that's their aim. As long as YOU (the participants of this newsgroup) PERMIT their mission to move along, then I will be handicapped in terms of posting anything MUCH of anything useful. They denigrate everything I post as it is - spamming up the thread to

where no one wants to read it.

Don't you see what is happening?

-= Bill Cheek =-

4111. PRO-49 to PRO-24???(mods?)

Newsgroup: rec.radio.scanner

I have the Pro-49 (rare edition) which was quickly discontinued by Radio Shack. They now have the SAME radio (same looks, same size, same buttons, same everything, except for features) under the name Pro-24. Here are the differences:
Pro-49 Has 10 channels, Pro-24 has 16 channels, Pro-49 does not cover the 800 MHz, and Pro-24 does cover 800MHz. Question: Since the radio's are both the same and they were only modified internally by Radio Shack to provide these 2 extra features, does anyone know of any modifications that would enable me to bring these features out?

Bullshit, I was just viewing the Scanradio echo a few days ago. It has MINIMAL posts on it, very little traffic. It is not nearly as active with the amount of helpful data like it was before you became GOD, & implemented your "ZERO TOLORANCE" ploicy. When I say "minimal posts" like I listed above crap like SEVERAL messages of what the secret service code names for Lyndon Johnson, Prince Edward, & Frank Sinatra really only count as one thing, especially when they were all entered by the same person.

> Yes? Well, they're here because they can't be kicked off.

TRUE, & I'll best it really pisses you off.

> Don't you see what is happening?

Yes Bill we do see are that's why we are acting.

I have not seen the other people bragging about being "engineers" with
dual master's degrees, teaching Ham radio classes, & having an FCC commercial
license like Bill Cheek does. IF anyone conducted themselves like Cheek,
imagine we would hold them to the same scrutiny.

Vincent D'Elia, Jr (deliav@comm.hq.af.mil) wrote:
: What does the term DC to Daylight mean? I've see it used seeral times
: lately but don't know the meaning.

The term is an exaggeration, it refers to scanners such as the AR8000 which cover a very wide frequency range with no gaps. DC is zero frequency, "daylight" or light waves, have a frequency of several thousand Ghz. Of course no scanner is capable of this range, but ones like the AR8000 cover 100Khz to 2000Mhz.

I tend to read the worthwhile posts - their little wars only serve to belittle their opinions here. Anything worthwhile they might add might get ignored if others start associating them with worthless flame postings.

Worse, many will simply "killfile" them and then nothing they may say will be heard by those that use killfiles.

regardless of anyone's flames, posts, opinions.....information on scanning is what this group is about. If they insist on posting flame wars, then we have the option of just not reading it.

So far I have just put an "ignore" on these threads, but if they keep it up, then it's killfile time.

And that's the greates thing. They can scream all they want - and I don't have to listen!

let's get some scanner posts in here to drown out the whining!

They are too childlike to know any better - that's what my killfile
does. It is like a "childproofing" for usenet.

Unfortunately, if they ever come up with anything worthwhile, I will
never know. But who cares. Bill has some good stuff (between the
flames), but these others are as useless as tits on a boar.

And one good article for every 10 flames or so is not good enough!

I agree with you.

Langley Research Center, Hampton, VA
(Phone: 804/864-6120)

RELEASE: 96-142

"HIGHWAY IN THE SKY" READY FOR ATLANTA OLYMPICS

NASA, the FAA and industry partners have provided the technology for a revolutionary new system to be used during the Olympics to move air traffic efficiently and safely in uncontrolled airspace over predetermined "highways in the sky."

When athletes take to the field in Atlanta for the 1996 Summer Olympic Games, specially equipped helicopters will transport high-value commercial goods and provide essential public safety services. Approximately two million people are expected to visit the Atlanta region during the Olympics, July 19-August 4.

The Atlanta Olympics offer a rare opportunity to demonstrate advanced communications/navigation/surveillance (CNS) flight systems for future air traffic management. Specially-equipped helicopters and supporting ground stations will enable dozens of Atlanta-based companies to overcome the expected transportation burden and generate an estimated $20 million in revenues. For medical, disaster and law enforcement agencies, critical emergency services will be significantly enhanced.

The two million dollar CNS technology development effort was co-funded by NASA, the FAA and eight general aviation companies, all members of the Advanced General Aviation Transport Experiments (AGATE) consortium. AGATE was formed in 1994 to revitalize U.S. general aviation through advanced technology development and deployment. General aviation includes everything from personal helicopters and fixed-wing aircraft to business, public and commuter aircraft.

The AGATE consortium is participating in the Olympic project through its flight systems team led by the Langley Research Center, Hampton, VA. Industry team members are ARNAV Systems Inc., Puyallup, WA; Harris Corp., Melbourne, FL; PanAm Systems, Minneapolis, MN; AvroTec Inc., Portland, OR; Digital Equipment Corp., Greenbelt, MD; ARINC, Annapolis, MD; Terra Corporation, Albuquerque, NM and

NavRadio, Golden, CO.

By providing key technologies, AGATE is contributing to a massive FAA-led effort to manage air traffic in the Atlanta region during the Olympics and lay the groundwork for future air traffic management and regional disaster emergency response concepts. The overall FAA initiative for the Atlanta Olympics is called "Operation Heli-Star."

Up to 50 helicopters equipped with AGATE-designed avionics will participate in the joint Atlanta operation. The Heli-Star program is designed to demonstrate the effectiveness of helicopters equipped with this system for improved safety, security and economics in urban operations. It is expected that more than 1,400 hours of flight-time during the Olympic games will yield data on operational use and human factors.

"It is amazing what the AGATE Olympic team has accomplished in a short period of time," said Bruce Holmes, manager of the general aviation office at Langley and director of the AGATE consortium. "The FAA estimates," Holmes said, "that this effort would have required more than three years using traditional government contracting procedures. This is a dramatic testimonial to the efficiency of the consortium approach to doing business with industry and within the federal government. It is also a prime example of reinventing government."

The AGATE-developed flight system is the first to demonstrate the combined use of digital data link communications and Global Positioning System (GPS) satellite navigation technologies working together to provide the pilot with accurate, easy-to-interpret graphical information about the relative positions of other aircraft and ground-based GPS systems. Aircraft positions also will be linked to radar-like ground consoles where air traffic managers and security personnel will be able to monitor their location and send data linked messages to air crews.

The specially equipped aircraft also will be capable of self-dispatch operations in a "free-flight" mode during the Olympic games. The Atlanta project provides AGATE with the first large-scale demonstration of free-flight capabilities. After Atlanta, AGATE plans further development of free-flight capabilities for general aviation use nationwide.

FCC Frequency Allocations

A summary of the FCC Table of Frequency Allocations, based on
the Code of Federal Regulations - 47 CFR 2.106, with additional |
information from the NTIA channel plan, et.al. |

30 - 50 MHz: FM @ 20 kHz steps
30.000 - 30.560 US Government
30.560 - 31.980 Business / Industry / Forestry
31.990 - 32.000 Public Safety
32.000 - 33.000 US Government
33.000 - 33.100 Public Safety
33.120 - 33.400 Business / Petroleum
33.420 - 34.000 Fire
34.000 - 35.000 US Government
35.020 - 36.000 Business / Paging
36.000 - 37.000 US Government
37.020 - 37.420 Police / Local Govt
37.460 - 37.860 Power, Water, Pipeline
37.900 - 38.000 Highway Maint / Special Emergency
38.000 - 39.000 US Government
39.020 - 40.000 Police / Local Govt
40.000 - 42.000 US Government
42.020 - 42.940 State Police
42.960 - 43.680 Business / Paging
43.700 - 44.600 Transportation - bus, truck / Cordless base
44.620 - 45.060 State Police / Forestry Conservation
45.080 - 45.860 Police / Local Govt / Highway Maint
45.900 - 46.040 Police / Emergency
46.060 - 46.500 Fire
46.520 - 46.580 Local Govt
46.610 - 46.970 Cordless Phones - base (20/40 kHz steps)
47.020 - 47.400 Highway Maint

47.440 - 47.680 Industry / Emergency
47.700 - 49.580 Industry / Cordless handset
49.670 - 49.990 Cordless Phones - handset (irregular steps)

50 - 150 MHz
50.000 - 54.000 Amateur (6-meter)
54.000 - 72.000 Broadcast TV chs 2-4 (6 MHz steps - FMw)
72.000 - 76.000 (various)
[75.000] Aero - ILS marker beacon |
76.000 - 88.000 Broadcast TV chs 5-6 (6 MHz steps - FMw)
88.100 - 107.900 FM Broadcast (200 kHz steps - FMw)
108.000 - 117.950 Aero - VOR and ILS localizer (50 kHz steps) |
118.000 - 136.975 Aero - communications (25 kHz steps - AM) |
[121.500] Aero - emergency (international) |
137.000 - 138.000 Satellite |
138.000 - 144.000 US Government - land mobile (25 kHz steps) |
144.000 - 148.000 Amateur (2-meter)
148.000 - 149.900 US Government - fixed/mobile, satellite |
149.900 - 150.050 Satellite - radionavigation |
150.050 - 150.800 US Government - fixed/mobile |

150 - 162 MHz: FM @ 15 kHz steps
150.815 - 150.965 Auto Emergency
150.995 - 151.595 Highway / Forestry / Industry
151.625 - 151.955 Business (30 kHz steps)
152.030 - 152.240 Mobile phone (Base) / Page (30 kHz steps)
152.270 - 152.450 Taxi (Base)
152.510 - 152.840 Mobile phone (Base) / Page (30 kHz steps)
152.870 - 153.725 Industry
153.740 - 154.445 Fire / Govt (mobile)
154.452 - 154.482 Industry (telemetry) (7.5 kHz steps)
154.490 - 154.625 Industry
154.650 - 156.240 Police / Govt / Emrgncy / Hwy
156.025 - 157.425 Maritime (ship) (25 kHz steps)
157.470 - 157.515 Auto Emergency
157.530 - 157.710 Taxi (mobile) / Business
157.770 - 158.100 Mobile phone (mobile) / Page (30 kHz steps)
158.130 - 158.460 Industry
158.490 - 158.700 Mobile phone (mobile) / Page (30 kHz steps)
158.730 - 159.210 Police / Govt / Highway
159.225 - 159.465 Forestry Conservation
159.495 - 160.200 Transportation - bus, truck
160.215 - 161.610 Railroad
160.625 - 160.950 Maritime - Coast (25 kHz steps)
161.640 - 161.760 { Broadcast Pickups |
161.500 - 162.025 { Maritime - Coast (25 kHz steps) |

162 - 450 MHz

Just a slang term indicating extreme bandwith (0kHz to a gazillion
Hz).
Also the "ultimate" reciever/scanner capability that we'd all like to
have.

Mark

The truth as I perceive it to be.
Your perception will be different.

4133. Re: Best Cordless Phone yet!!!!

To my knowledge they don't. I assume you have their other
frequencies. If not 159.210 and 155.460 are some good ones to try.
Also in a lot of places, they will use the local Sheriff's Dept for
running tags and DL's. At least they do in Ellis Co. although they
will use their own channels if Ellis Co. is busy.

I just received a rather large (200k) obscene mail bomb supposedly from
John E. Mackey.
But it wasnt from Mackey. It was either from Cheeks or one of his minions.
They left a clue. At the bottom of each page was:

Get Your *Web-Based* Free Email at http://www.hotmail.com

This is a web site that allows one essentially free anonymous email.
Except it doesnt.
So we'll know soon.
BTW, I'd be willing to wager that some others have received a similar
bomb with my address as the sender. Dont buy it. Its a forgery.

4136. SAAF UHF Frequencies

Go away PjB. I have had threats from others of your group. When you and others are the start of all this crap. Why do you claim NO advertisment shall be placed in this newgroup. When
just recently another company placed an advertisment and you had nothing to say. What is your beef
with Bill other than when you started shooting your mouth of you were booted.

Go away or post something useful other than ramblins, generalizations and assumptions.

I find the Interceptor very useful. But it will lock on to every near field signal around it making it fustrating at times when you are looking for a specific signal.

Try using antennas tuned to the band you want to capture a signal from and pass the signal through a Jim M-75 pre-amp used as both a pre-amp and bandpass filter.

I've tried it while mobile and found I could lock on to mobile cell phone users upwards of 2 blocks away instead of the 3-4 car lengths I would get w/o the Jim.

It also works better in the VHF and UHF bands but again, without a filter to narrow the freq range, it will simply lock on to every signal that comes it's way forcing you to push the skip button until you find the desired freq.

Reducing the sensitivity (squelch) setting will also help. This will help prevent it from capturing the FM broadcast and TV signals that play havoc with our scanners.

The need for one depends on what you want to use it for. One fellow who does "sweeps", told me it can be an effective instrument to quickly determine if the person standing in front of you has a hidden "wire" on his person.

I use it along with my freq counter as I drive down the highway. Both have detected two-way radio users around me that I never would have known about w/o them. Again, depends on what you want it for.

Gus

Source record: 228592

Here's how..

The Quest: How Far can $5 GO?..

I was scanning thru a NEWSGROUP and saw an article stating to
GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll
just have to see what schemes could possibly be on the internet."
The article described a way to MAIL A ONE DOLLAR BILL TO ONLY
FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well,
the more I thought about it, the more I became very curious. Why?
Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME
FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash is maybe an tough amount to reach,
but it is possible. I know that I can at least get a return
of $1,000 or so.

Let's review the reasons why you should do this: The only
cost factors are for the five stamps, the 5 envelopes and the 5
one dollar bills that you send out to the listed names by Mail.

Then just simply repost the article (WITH YOUR NAME ADDED) to
all the newsgroups and local BBS's you can.

Then sit back and, (ironically), enjoy walking
(you can run if you like! :o) down your driveway to your
mailbox and scoop up your rewards!! We all have five dollars to
put into such an easy effortless investment with SPECTACULAR
REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So
HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT
HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND
INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM
NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully
provided the mostdetailed, yet straightforward instructions on
how to easily get this underway and get your cash on its way.
SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!

INSTRUCTIONS: (w/Just 5 1 dollar bills, try it!)

1. Take a sheet of paper and write on it the following:
"Please add my name to your list". This creates a service out
of this money making system and thus making it completely legal.
You are not just randomly sending a dollar to someone, you are
paying one dollar for a legitimate service. Make sure you
include your name and address. I assure you that, again, this

is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That

way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one

line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like... "Get one million dollars flooding in your mailbox in two days!" You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON ITS THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

9. Good luck and give this plan your all, it will definitely pay off! Like Mike said, HAVE FUN WITH IT!!!

Enough already!!!!!!!!!!! This Bill Cheek flame crap has to stop.
It all but ruined the scan radio conference on Fido net, and is
doing the same here. Some people just want to check in and
get some useful info on scanning. I, among others, am tired of
of having to skip around all the crap to get to the good info.
This is a discussion area of a technical, intelligent nature, yet
is filled with this immaturity. I am traveling the information
superhighway, and there are a bunch of jerks stopped in the
middle of the road arguing. It does not matter whether all of them
have college degrees or not, they are holding back the rest of us.
So, for the sake of all that is good, shut up, get back in your cars,
and get the hell out of our way!
Mike Smith

From: mmwr@msn.com
Message-ID: <00001ff6+00005305@msn.com>
Source record: 228638

I've noticed two good sales this week.

EEB is selling the AR2700 for $219 (possibly $209, can't remember).
Limited number, they say.

And the Optoscan add in the latest POP'COMM received today shows
$100 off ($199 instead of $299) for the Optoscan boards.

I'm thinking of buying the Optoscan unless someone out there has
some bad opinions about it.

Happy scanning!

Andrew Clegg

Hello, does anybody know what frequency Ontario Provincial Police (OPP) Air Units operate on (both helicopters and fixed-wing)? I have an old computerized frequency list for Ontario that lists 42.0 MHz as "O.P.P. Air." Would anyone be able to tell me if that frequency is still valid after the upgrade to the new VHF-high system a while back? I have been monitoring that frequency for almost a year now and have heard nothing. Is it possible that they use the CommCentre frequencies or a new frequency? Anyone with info. please e-mail me or post here.

One last thing. The OPP used to have two helicopters at the Brampton Training Academy. Does anyone know if these are still in use at Brampton?

Any responses will be greatly appreciated.

>->->he's an OK guy after all. What a con.

Hey PB
If my memory serves me correctly, before most of this crap started somebody asked a ligitimate question concerning the pinouts of certain discriminator output chips.... The man is responding with useful data again...

LEAVE IT AT THAT AND LET THE GROUP GET BACK TO THE TOPIC OF RADIOS!!

It's responses such as these to valid posts that continue the feud, I don't blame a man for firing back at you for your flame responses and I'm sure he will. People like you start them, and he will end them or continue them.

It appears that you're wanting him to, to try to make him seem like the bad guy. One of the only differences between his posts and yours is the intellegence level of what's said. His are obviously higher.

I've seen the pattern repeat itself several times over the past year and it's always the same. He posts (whether it be something with an ad or not), somebody posts something derogatory about his posts and of course he posts back in response and it goes from there. I have yet to see the man post anything abot anybody as a first attack. That's another difference between him and you (and others like you).

While I can't speak for anyone else but myself, I feel confident that many feel the way I do about this.

Bill - I got your postcard!!!!! I know you sent it because you told me to pack sand just like you said above & because it is postmarked from San Diego & because it is a a CB radio qsl card. Your web page says you live next to Miramar Navel Air station (San Diego) & your web page shows a picture of you & your butt ugly wife standing next to your 2000 GTL CB RADIO. I even attached it here for all to see.

Thanks Bill, I laughed for an hour. We posted it on our group web page also. Go look at what we say on HTTP://www.teleport.com/~mscott/dumb.shtml.

That card you sent was a great laugh.

[One or more binary attachments are retained only in the source text.]

Thanks to those who replied to my inquiry about GPS units.
The leading newsgroup for discussions (extensive!) of this
topic appears to be sci.geo.satellite-nav -- if there's
any other GPS newsgroup, I don't know about it.

4159. Here's an active Ocoee Olympic frequency!

Newsgroup: rec.radio.scanner
Date: 1996-07-28 00:00:00 UTC
From: jknight@chattanooga.net
Message-ID: <4teh0d$322@news.chattanooga.net>
Source record: 228349

For those within listening range of the Ocoee river Olympic venue, try tuning in 139.45 MHz. I am hearing it quite well in the Chattanooga area even with a handheld scanner. The traffic involves transporting athletes and officials in and out of the venue area and providing meals to the workers. All day today (July 27) it has been quite busy and all in the clear.

I would ask why, but I don't bother to deal with these flame wars. Let's keep this group to scanners, modifications, frequncies. Keep the flame wars to private email. Many of us pay for our access, and have limited disk space. The more articles I get, it starts deleting older articles and I wind up missing things that I might want to read.

I saw nothing of the original to this post but fair is fair.
Hey Stevie...baby... can the advertising here on the newsgroup.
Put all you want about it on your Web page but I personally care not
to see advertising going on here.
If your product is viable then word of mouth and discussion of it will
occur.

"TeePee" is indeed the so called "Forger". I thought you figured that
out by now Willy ? Did you miss some of my posts about it ?
Yes, I know "TeePee". No, I did not solicit his "help" to do what he
did. Call in the FBI, CIA, National Guard and the Internet police.
So do we have that one cleared up ?

I'm attempting to wind the 'war' down from my side.
You're making it very difficult with your continued "not to let it go"
replies.

Lay low for a while and post all you want but kindly keep the
subtle advertising out of it.

Yes, but unless you are a ham radio operator, you can't use them. This band is shared with hams, and if you go even a little out of the "limits", and one finds out, they will make sure the FCC jump up and down on you. That is one bunch you don't want to mess with.

If you hold a ham license, then you can run high power levels there, and use antennas and so on....provided the proper ID is used, and you don't use it for business.

KAM>: let them know they were ready.

KAM>: Also, I am interested in Pittsburgh airport, where I live. I have a list
KAM>: which gives 3 tower frequencies, 4 departure frequencies, 2 approach, 1
KAM>: clearance, 2 ground control, and a ramp master. What are all of these use
KAM>: for? I am sure there are others in this newsgroup as confused as I am.

[I'm not a pilot but I sometimes play one on my computer...:)...]

A medium-sized "controlled" (radios required) airport will usually
have only one tower frequency, and (maybe/maybe not) an approach and
departure control frequency set. Tower handles close incoming
aircraft, fly-overs of other aircraft not landing, and immediately
departing aircraft comm. Ground control handles aircraft on the
ground plus radio-equipped service trucks of all kinds. Approach
control handles the first contact with incoming aircraft. Departure
control handles the last contact with outgoing aircraft. Depending
on the size of the port, approach/departure controllers may have
radar and advise the pilots on radar-visible traffic (transponder-
equipped aircraft automatically supply altitude seen on the radar
tag). Departure control will usually "hand off" an aircraft to a
center, the name for an area air traffic control that covers many
airports and the air routes going through the center's control area.
There may be more than one approach or departure control depending on
the daily traffic and airways routings.

The various frequencies are there to keep radio congestion to a
minimum during peak hours. You can get exact frequencies and
locations by a telephone call to an FAA control tower or flight
service center. To _really_ follow the aircraft, you can buy a
"sectional" chart to an area or a "local" chart (more detailed
portion of a sectional chart) at airport shops that sell utility
things to pilots. Those charts have all the frequencies. To begin
following air traffic, monitor tower frequencies first to get used to

the jargon and phrasing. Then listen on approach control, get the first contact of an incoming plane, follow it in mentally, and switch to tower when the tower advises the pilot to switch. If you have some elevation you can get the ground control instructions, but I've always found those kind of uninteresting.

The phrasing is short and quick between air carriers and towers since they do this kind of talk daily. Newbie pilots (as I once tried to be, heh) talk much slower. Sometimes a pilot's acknowledgement is to press the mike button twice without saying anything; you can hear that with or without squelch. If you hear something like "American one-one, clear for two-seven-left" that means that AA flight 11 is cleared to land on the left runway that goes in the direction of 270 degrees. Runways are identified by dividing the degrees by ten. Runway 9 right is the same one as 27 left and the reference is for the pilot.

If you tune into the 108 to 118 MHz region, you can pick up the local "information" tape loop over a VOR radionav frequency. That's a repeating tape of current airport weather conditions: Wind, temperature (hot temp means a longer takeoff and landing roll), and barometric pressure (for setting the mechanical altimeter) plus cloud cover (if any). Towers can break into this VOR transmission to assist less-experienced pilots who fumble in switching to tower frequencies. Those loops are identified as "information alpha" for the first one after midnight local and continue through the phonetic alphabet as the weather information is updated. Pilots on first approach contact will tell the controller they "have information bravo" and that relieves the controller of repeating the second update. Note: "Information hotel" is not about room reservations. I like those information loops; they are better than two to three-hour late AM/FM/TV broadcast weather.

Hi Larry,

Please add my name to your kill list. Also, you may save the congratulations if I make the list, as being on any list of yours appears to be of insignificant consequence. Apparently, the criterion is to be on either side of being for or against the flame war currently in progress. For the record, I am REALLY tired of it and am certain that at sometime in the future, when I reach B.S. input overload, I will comment in some fashion. So, do yourself a favor and put my name in your file.

Glenn Reed, KF5XB
CAP - OKWG/DCA

P.S. - If the criterion IS commenting in any fashion on these proceedings, then don't forget to add your name as well. TTFN.

Hello to all,

I'm going to stay in New York for a few days and planning to take my
scanner to listen (also) to USAF RCC "Huntress" GCI

I've got some frequencies:

233.600
239.200
251.800
258.000
273.400
278.400
288.000
338.100
364.200

My quistion: are there more frequencies in use by "Huntress"???

Thank You very much

Gerbrand Diebels
SC-MAC

>took over. >IMHO the participants are sending you a message.

At least you could tell the truth. Posts are running about 150/week.
That 50/day you spoke of.....consisted of about 25/day of potshots
from the likes of Sir Duff and Madame Mackey. Now it's 20-25/day of
good old down to earth scanner chat and information posts. No flames.
Not snotty jerkoffs. No potshooters. Just the topic of scanners and
scanning. Go back and take a count AGAIN, pal. Don't look for a low
count day where there might be a half-dozen unless you also cover the
whole week where some days have 30-40 good posts.

>>You want good scanner information? Well, I have the capacity to post
>>gigabytes of it here. But why should I? I did nothing to Boe, Duff,
>>Mackey, Pacan, Alexander, and Company to warrant their mission to get
>>rid of me. But that's their aim. As long as YOU (the participants of

>>They denigrate everything I post as it is - spamming up the thread to
>>where no one wants to read it.

>Ah....you have reached the heart of the matter.....what can WE (the
>participants of this newsgroup) PERMIT????

Well, some sure seem to move rapidly to play the PERMIT game when it
suits their purposes. Seemed to me they could move to suit purposes
of the greater good, too.

>WE (the participants of this newsgroup) certainly don't want to PERMIT
>the likes of Mr. Duff to slam people without impunity.....but what do
>WE (the participants of this newsgroup) do when a participant
>oversteps all bounds of taste or civility? Are you saying that WE (the

>capability to PERMIT some things and FORBID others? Up until now,
>you've told us that all we can do is tune such people out, use our
>kill files or whatever to ignore their posts.

Tough call. Apparently Boe, Mackey, Duff, Pacan, and Alexander feel
they are a majority of five. I don't see you telling THEM they're

just five individuals.

>It's a two way street, Bill.....if WE can take action against their
>behaviour when they deserve it, WE can take action against your
>behaviour when you deserve it. Are you ready to accept our judgement
>of your behaviour?

Hasn't THAT already been set as a precedent over this last year? And
since it has, I guess I am entitled to ....ummm....return the favor.

>>Don't you see what is happening?

Yes, I think I do...........

>Yes, I do. It's called "Do as I say, not as I do".

Really now? I think I am saying what has already been laid into
concrete......but from the other side of the fence.

>Personally, I would prefer to forego those gigabytes of marvellous
>posts you offer, if the price of admission is giving you the license
>to act as crudely as you like when someone takes a shot at you.

Ok. How about YOU posting some "kilobytes" of information here? Too
much to ask? You're quick to attack. Let's see how quick you are to
work.

>It doesn't matter who started the dispute. There is a minimum level of
>behaviour that should be expected from posters, even if others are
>attacking them. You seldom meet that minimum.

That's YOUR minimum.......stated from a very comfortable position in
an ivory tower. I wonder how it would be if the tables were turned?

I'll never know because you won't commit and take a chance. It's much
too easy to potshoot from the comfort of your ivory tower.

4203. Why Cops use trunked systems...

Newsgroup: rec.radio.scanner
Date: 1996-07-28 00:00:00 UTC
From: andyb@qni.com
Message-ID: <4tgl51$ekc@suba01.suba.com>
Source record: 228407

There have been a number of comments made concerning the reason Law Enforcement has been migrating to 800 MHz trunked systems. The following paragraphs should help clear up the matter.

First, we need to get some things straight. Statements have been made like, "...cops hate dealing with the media." or "...the way cops keep the media from listening in is to ï¿½trunk them outï¿½" or "...cops wonï¿½t admit they do ï¿½such and suchï¿½ to keep people from listening in" and "half of all convictions are due to scanner listeners." Those are opinions of the authors...not necessarily facts. They are arrived at by analyzing personal experiences and coming up with results. The results are only as valid as the quality of the information and the logic used.

In the study of logic there is a term called the Fallacy of Ignorance. In a situation where something cannot be proven, someone will announce that since it canï¿½t be proven, it must be true (OR false...it works both ways.) Cops have been accused of refusing to admit that they use "special pagers" to send "secret messages" to keep the media in the dark. Since they wonï¿½t admit it, it must be true. Itï¿½s no different than the old saying, "Everybody likes to smell farts...itï¿½s just that no one will admit it." When someone says they donï¿½t like to small farts, you can say you have proven your statement by saying, "See...he wonï¿½t admit it!"

Another term in logic is the Fallacy of Composition. In this fallacy, if one or more parts of something are a certain way, ALL parts are assumed to be that way. This comes in to play when a statement about a set of people, things or ideas is made such as "all blonde females are ditzy." The validity of such statements can be increased by taking a larger sampling of blonde females, but until you study 100% of all blondes you cannot state that it is true. Having one exception to the statement makes it false. (My wife is a blonde, and she ainï¿½t ditzy!) This may cause one to recant, saying "Well, not ALL blondes are ditzy, but MOST of them are." It now becomes a mathematical problem. How many is "most?" ..95%? ...50%? ...5%? In that case you must offer the results of the poll or survey and let the reader determine if the number is "most" or not. The validity of the results are predicated on the quality of the survey, but thatï¿½s another subject.

With that out of the way, we can continue the discussion about whether cops purchase trunked systems in order to keep the media and others from listening in.

Those of you who have followed this thread might recall that not once have I made a blanket statement about the media and/or scanner listeners in general. I have relatively NO knowledge of how the media works or thinks, therefore I havenï¿½t made statements indicating how they work or think. On the reverse side, I HAVE made blanket statements about the cops. The Fallacy of Composition could be lurking in the shadows, getting ready to bite me in the behind. I have 14 years of experience and

have talked with probably several hundred cops about this topic, either directly or indirectly. That is a small sampling of all cops, but it is no doubt greater than the number interviewed by any reporter. It is an especially small cross section since Bill put another 100,000 more of them on the streets! (yeah...right.) My assumption would be that cops talk more openly to other law enforcement types than they are do those in other walks of life and probably gave me the straight scoop. (Another Fallacy of Composition!)

"Screw the media...letï¿½s get a trunking system!" was reportedly uttered by a fictitious mayor of a fictitious city in one post. That author assumes that the media is the deciding factor for such enormous purchases. In reality, the media probably never gets mentioned in those types of decisions. Perhaps they are later on...AFTER the decision to buy has been made, but that dialog is usually about whether or not the media will get a radio that allows them to monitor dispatch. Of course youï¿½re going to have a number of media folks get together over a beer or two and reassure each other that they are being singled out and picked upon, but that is the result of the Fallacies coupled with an alcohol daze. Weï¿½ve all been there!!!

This is about the 4th time I have said this, but if secrecy were the aim of a PD they would invest in a much cheaper, completely secure DVP system instead of a very expensive trunked system that provides minimal security. The city council members are surely aware of the costs and benefits of both systems and would choose the one that was better and cheaper, assuming radio security was the goal. Pretend you are the city council and you have to make a choice between two systems offered to keep the media from listening. You have to pick from:

A. $10,000,000 trunked system that offers little security.

B. $100,000 DVP system that provide high security.

Which one would you choose?

"The cops hate the media and they hate dealing with the media."

Some do, some donï¿½t...I donï¿½t have any numbers on that. My personal experience is that the media are one of the last considerations during decision making in law enforcement. First comes things like officer safety, safety of the citizens, securing the scene, collecting evidence, maintaining police protection for areas not involved in the "big call," traffic control, relieving officers at the scene, who is going to come in early to cover for the officers on the call, how to get water and food to the officers at the scene, making sure they have all the equipment they need, contacting the tactical squad, alerting adjoining agencies, notifying the brass, getting tow trucks in and out, etc. Get the picture? If the media shows up, the cops handle them in a fashion that doesnï¿½t compromise their investigation. About the only people that I know of that have any anticipatory concern about the media are the dispatchers. They know that some types of calls can really light up the phones. Dispatchers might whine that when the big call occurs they have to answer all the media questions instead of doing their primary duties, but that is generally the extent of it...just part of the job.

"Cops use special pagers to deliver secret messages to hide things from the press." We touched on that earlier in this posting. A rough

estimate of our pages show that about 60% of our pages are non-business related. Donï¿½t tell the chief that! Of the 40% that are business related, a large percentage are messages to call the DA, or contact the Sgt. when you clear the call, and similar type information. Some pages ARE made for critical incidents, but the reason for using the pager is not for secrecy, but rather because of the ability to notify multiple officers at once. Imagine trying to contact all the tactical officers, the brass, and the hostage negotiators by phone one at a time! I know of NO agency that uses pagers instead of a radio for dispatching. Of course, we wonï¿½t admit that we use ï¿½em for that. (grin)

Another point of contention is that scanner listeners in general are a great boon to law enforcement. One writer claimed that the Illinois State Police attributes a full 50% of their convictions to calls from scanner users. Fallacy of Composition...sort of. This one is so far fetched that I donï¿½t know where to start. I originally asked for the statistics for such a startling number, but I received no reply and it died a quick death. As I have mentioned before, I have had no incidences in 14 years of experience when a scanner user called in any information of importance. My experience may be below the average, but since I donï¿½t have the stats I couldnï¿½t say for sure. I HAVE had many of them call in to advise of things such as kids skateboarding on a mall sidewalk, or a suspicious man dressed in a brown uniform, driving a brown step-van, carrying a box and a clipboard going to houses in the neighborhood, and other equally suspicious activity which makes me wonder if some do this just so they can hear something on the scanner that they called in. (Last part is not a statement...just an observation.)

One guy said that if we solicited all scanner listeners to call in whenever they observe something about which they heard on the scanner, we would greatly increase our productivity. Another unknown variable. My only experience with something like that is the TIPS hotline which exists in most cities. Television stations highlight a particular crime and ask that anyone with information call the TIPS hotline. The system works...but again, the number of pertinent calls are greatly outnumbered by those of no substances. Yes...the number are available, but I don't have the energy to go crunch them right now. The TIPS line is answered by various police department dispatch centers after business hours, and there have been times when a particularly terrible crime has required that an extra dispatcher be paid overtime simply to answer the hotline. I would think that if such a plan were implemented, the budgets for the communications units would need to be boosted to cover the extra manpower needed to answer the phones. Since it has never been tried, I canï¿½t say that it wouldnï¿½t work...nor can anyone say that it WOULD work. Might be something to look into, though. Oops...I am digressing.

It was also mentioned in a posting that the media could threaten to smear the people responsible for buying trunked systems, and therefore do grievous injury to their political careers. (Sounds like extortion to me.) In the August 1996 issue of Monitoring Times magazine page 4, under a column headed, "Donï¿½t Give Up on Scanning," the author of a letter to the editor wrote, "...Many appear to blame the various departments (for the change to trunked and digital systems.)" He further noted that "...we

can blame the overwhelming rise of crime which has inspired an increased need for security for law enforcement personnel; the media, which has continued negative reporting on scanners and the people who use them, and new technology, which has affected almost everything in our lives-why should it not affect the communications industry as well?" Isnï¿½t it interesting that some people think the media is the CAUSE of the problem instead of the "victim" of trunking?
In the same magazine, page 30, column 1 under "Bunking with Trunking-Again" Richard Barnett said, "Trunked systems can be monitored with knowledge and patience. You will not hear every bit of particular conversations, but you will hear the gist of any important goings-on." I regularly listen to the 3 operational trunked systems in my area. Yeah, itï¿½s irritating...but I can keep up with what is happening. Reporters can, too.
Since some of the contributors to this thread are in the media, and feel comfortable voicing their personal opinions, I will close with my own ideas on the subject. I always thought that a reporter was just that...a reporter. He watched what went by in the world, and reported what he saw. No personal opinion, no bias, no slanted objectivity...just the facts of what happened. He is the eyes and ears for the folks that canï¿½t be there. For instance, a truly unbiased article about a political speech might say, "Dole said ï¿½Blah blah blah about the blah blah blah.ï¿½" Period. The same speech from a biased reporter might say, "Dole, in order to regain support of his party, said "Blah blah blah about the blah blah blah.ï¿½" It was the latter reporterï¿½s opinion that he said it to regain support. (Unless Dole said it was for that reason himself, of course.)
Some of the posts from them in this newsgroup were by their own admission opinion and not fact. Their ideas on why law enforcement elects to implement trunking systems are equally suspect to me. It makes me wonder if the media arenï¿½t trying to hide something by offering to the public what they want them to know, instead of offering the raw facts. (THAT ought to light up the switchboard!)

Andy

PM>From: Paul Mahler <pmahler@databased.com>
PM>Subject: What is the difference between a scanner and a shortware radio?

PM>If a scanner covers the same bands as a shortwave
PM>radio, what will a short wave radio do that a
PM>scanner won't, or what will a scanner do better or
PM>worse?

There isn't that much difference, electronically, other than
frequency ranges.

A "shortwave radio" is intended to be used with stations that
broadcast for a long time on one frequency. Selectivity is
relatively narrow since those broadcasts are amplitude modulated.
"Shortwave" (a very old term) denotes the HF or High Frequency part
of the spectrum, from 3 to 30 MHz. Signal propagation takes
advantage of the mirror effect of the ionosphere to "bounce" signals
half way around the world.

"Scanners" tune the VHF (30-300 MHz) and UHF (300-3000 MHz) portions of
the spectrum. Most of the transmissions (but not all) are of relatively
short duration; sometimes a communication may be on two frequencies, a
different frequency for each communication direction. A true scanner
receiver has the ability to scan a range of frequencies quickly and
"lock" onto signals automatically, freeing the listener from continuous
retuning. The majority of signals (other than TV and FM broadcast) on
VHF and UHF are frequency modulation and the selectivity is relatively
wide (compared to shortwave receivers) to accomodate the frequency
modulation bandwidth. VHF-UHF signal propagation is line-of-sight and
confined to relatively short distances. Transmitter powers for non-
broadcast services are relatively low (tens of watts) while shortwave
transmitters have power outputs in multiples of kilowatts.

You can get receivers that have both "shortwave" and "scanner" features,
though at a higher price. If you are interested in listening to foreign
broadcasts, then a shortwave receiver might be preferred. Scanners are
generally for those who want to monitor local police/fire/utility/
whatever organizations' communications.

>MR>Do garage door openers use radio freq's... if so, what band ?
>MR>Are these decodable ?

Diff. makes have diff. freq.s.

Stanley is at 310mhz with only 1024 codes.
Some Linear products are at 312mhz with ONLY 512 codes.
Most newer remotes are at 310mhz with 59049 codes.

Does anyone know how the secure button on Stanley remotes work?? It transmits
the same code, just at a faster speed.

>300 MHZ comes to mind.
Nothing at 300mhz I have found, but 303mhz is used by some car alarm
remotes.

>Rumor has it the following makes a universal garage door opener:

>Yank out the code switches.

>Put binary counters to these wires.
>Run counter and exercise all possible codes.

This does work on some Stanley/Linear remotes.

Garage owners may want to look to replace the receiver on their garage opener.

I have at my house, just make sure to disable the old receiver.
I used a Clifford ACG receiver that can't be scanned or CodeGrabbed.

>>to Brunswick, or something like that (in Nova Scotia, perhaps????).

British Airways uses "Speedbird" to signify Concorde flights. All other flights use the "BA" flight number (e.g. "BA466"). "QK" would either be another airline (if the message was from a commercial aircraft), or an exercise in "borrowing" another airline's tag, such as AA. Concorde stays as a BA flight, as far as I know.

Concorde *is* banned from flying supersonic over all land (inhabited or not). And I certainly wouldn't describe it as quiet!!!

Ian (from under the Concorde priority orbital into Heathrow)

Can Cheeks possibly mean this? True, there are some stalwarts in the effort to keep Cheeks's commercialism out of usenet (more than the above named), but the ratio of pro-Cheeks to no-Cheeks is _heavily_ weighted toward the latter. Even a cursory appraisal of the record will bear this out.

BTW, only one 'a' in the word scanner....

From: ksalmon@telerama.lm.com
Message-ID: <4tdgj6$qni@scramble.lm.com>
Source record: 228427

I have been asking for the past four years why Radio Shack won't build a scanner with an rs-232 board. I have yet to get an answer, all I get from the radio shack managers is that they are either too expensive or that no one will buy them. I have a pro-2005, an AR-3000 ,an AR2515 and a pro-43. I have talked to many scanner listeners that would LOVE to have an american scanner that they don't have to manually input 400+ frequencies into a scanner. Since I can't get an answer from radio shack, maybe I can get an answer from the buing public.

4224. Cellular Freqencies???

>
>What is the main difference between these two?

There is no difference. The two model numbers are
the exact same radio. Which one you get depends on where
you buy it.

To confuse things further, Uniden has started
advertising the "BC-225", which is the 200/205 with all of
the previously "optional" accessories (AC adapter, etc.).

>Which Orange County/Orlando City agencies are presently using the new
>trunked public service system. Is Fire/EMS also on the trunk? How
>about the Medical Helicopter? Any o
>I will be heading to Disneyworld
>
>Joe
>
Not knowing that much about radios, but by working for the county and
using one regularly, here is what I know:

It is a Motorola system that uses 21-35 different 800 mhz frequencies
(originally 21, I heard it's up to 35) It is used for Orange County
only,the different talk groups include Sheriff, Fire, Public Works, Public
Utilities, Zoning, Engineering,etc. The city of Orlando does not use
this, they have their own.

The talkgroups hop on the frequencies and are hard to scan (so I've
heard). There is no set or changing pattern, just whatever the next
available unused one is. Don't know the freq's, but know in scanning them
you will bounce between, sherrif, fire, highway maint, animal control,
waste water, etc. In other words, hard to follow one converstion.

Not an expert by any means, but hope this helps.

4227. Scannist Web Page Update

Newsgroup: rec.radio.scanner
Date: 1996-07-28 00:00:00 UTC
From: dstark@frontiernet.net
Message-ID: <4tg2ke$ll0@cheatum.frontiernet.net>
Source record: 228431

The August Update to the NF2G Scannist Pages is now online at http://www.frontiernet.net/~dstark.

There you will find upstate New York frequencies and maps, some coverage of southern Ontario Province, feature tables on several makes and models of scanners, information about US and Canadian scanning laws, amateur radio nets that discuss scanner listening around the state, hobby related news information, recorded scanner audio samples, and lots of links to related resources on the Internet.

If you're in the Upstate area and are interested in the possibility of a pager notification service similar to those that cover major metro areas around the country, be sure to read the Hotflash page.

The website is in the process of being enhanced with Microsoft ActiveX controls and HTML 3.2 extensions. The information is still accessible to low speed links and HTML 2.0 browsers, but there is even more to see if you're using Netscape 3 or Internet Explorer 3. I'm building animated presentations with PowerPoint that can be viewed over the Web, and one of them is already online.

Explorer users will see the frequency lists in COLOR.

If you care, you can also find my c.v. - on my website where it belongs rather than in any newsgroup.

Stop by and enjoy - and send feedback while you're there.

<snip>

Well given the success of the 8000 I would say those research people missed the boat. An now with the AOR2700 being liquidated for $210.00 it will become pretty popular as well even if it is not the best scanner. Up here RS has like 12 different models of scanners and least 8 different handhelds. If they want to optimize inventories they might consider reducing their selection and providing more differences between models. Oh and in Canada they should get off their high horse and put back the Cellular band since its not illegal for them to sell it with full coverage. Since they sell cell phones, they like to mislead their customers that there is some privacy when using them.

I believe in the UK, it's legal to listen to phone calls, but you can't
act on what you hear. But it's not legal to listen to the police.

Exactly the opposite in the US. Perhaps they should get long-range
scaners so that US citizens can listen legally to Brits on their
cellphones, and Brits and tune in the American cops.

4241. Bearcat Sportcat (SC-150)?

Newsgroup: rec.radio.scanner
Date: 1996-07-28 00:00:00 UTC
From: jimme@hula.net
Message-ID: <31fabb86.1218181@news.hula.net>
Source record: 228445

I did some research on this scanner for some specs and mods. I found some specs and some general comments but nothing on mods. I checked the FAQs for the newsgroup, a seperate FAQ on scanner mods, and two or three ftp archives with scanner modifications, I also read just about every post put here and the alt dot counterpart for the past two weeks, and did some Dejanews and Alta Vista searches. Most of the info I've found seems to be for older model scanners. Does anyone know where or how to get more updated data specifically the Sportcat or at least some of the new RS models?

Jim

4242. ONTARIO Web Page - UPDATED

Newsgroup: rec.radio.scanner

I've been busy updating and making changes to my web pages.

You'll see some changes to the first page, such as faster loading
and some new features such as a seperate news section.

I"m still making lots of updates and will be adding material I hope
in the next few days.

Check out http://www.interlog.com/~ronkatz

i just repaired one earlier this week with the same symptoms.
a capacitor was leaking on the top board, i think it was a 220uF 16V cap
near the bottom side of the PCB.this is in the circuit of the 5 volt
stabiliser input, i measured a short there and traced it to the cap.
after replacing the cap, i still had problems because the voltage to
this circuit is switched by the cpu, the transistor that was switching
was dead (located on the bottom board near the connector), i just shorted
the E and C because i couldn't find any info on this transistor, it works
,the light is back, the sound is back
i didn't have the circuit diagrams but i think the cpu switches this
circuit for mute reasons ??

-Bill Cheek-

>DM> What is the best way, if any, to increase the sensativity of the PRO2004.
>DM> I just programmed a PRO2022 which was receiving signals much clearer.
>DM> Thank you for your time! Dan MacDougall (Tandy Technician)

Surprisingly often, clarity of a signal is not a function of
sensitivity; rather of something being off frequency. If the
transmitter signal is off frequency from the receiver, or if the
reciever is not tuned right on to the transmitter, clarity will
suffer. Just because the DISPLAY in the scanner says it is tuned to a
given frequency does not mean that the internal alignment is accurate!

There are a number of adjustments in the PRO-2004 which can affect the
clarity of the received signal.

The first thing that should be established is the accuracy of the
Reference Master Oscillator, X-301, down deep in the PLL unit. If
this puppy ain't right, nothing's going to be. It is a precision
10-MHz temperature controlled crystal oscillator with a tiny
adjustment inside the metal case. You should sample this 10 MHz
signal at Pin 14 of IC-301 with a very accurate freq counter and see.

+ or - 5 Hz is the required accuracy. Few frequency counters are THAT
accurate, though, so you should use WWV at 10 MHz as a reference
standard and zero-beat X-301 to null with WWV on a nearby shortwave
receiver. If the receiver can't "hear" the scanner's 10 MHz reference,
just touch IC-301 with the tip of a short wire.... to radiate a bit of
the signal to mix with the incoming WWV signal in the shortwave
receiver. You should hear an interference mix or "beat" note,
including a "whoosh whoosh" if the signals are close. Adjust X-301 so
that the "beat" lessens and then drops out into a pure "mix" of the
two signals. Adjusting X-301 a bit one way and then the other will
give you the idea. The PRO-2004 Service Manual does not offer a
procedure for adjusting X-301, but this method is about as good as it
gets outside the certified calibration lab

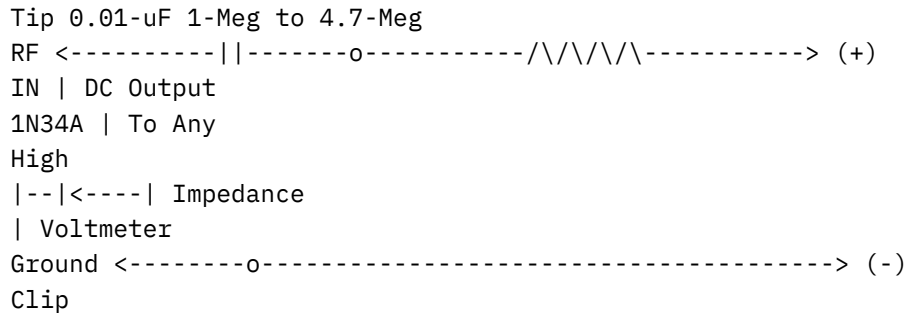
ALL NOTE: The above procedure is also good for the PRO-2005 and 2006.

The single most critical adjustment to clarity is the setting of T-13. Attach a DC voltmeter from ground to TP-4. Set the receiver to a NOAA weather broadcast station, NFM, and adjust T-13 for a reading of exactly 3.80 volts. This may produce surprising results alone!

The remainder of the IMPORTANT part of the alignment should be done with the same NOAA Weather Broadcast signal coming in, and an RF-probe attached to the cathode of D-31. Adjust the IF coils for peak signal on the meter. These coils include T-1, T-9, T-10, T-11, T-12, T-7 and T-8 in that order. Finally, touch up the adjustment of T-13 once more. DO NOT ADJUST ANYTHING ELSE! The Tandy Service Manual is NOT the best guide for alignment!

Oh, and whenever SENSITIVITY seems to suffer.....reach around to the back of the scanner and make sure that little ATT switch is set to the 0-dB position. All too often, it gets bumped to -10 dB and no wonder sensitivity seems off a bit. Ha ha ha ha. Happens to the best of us.

An RF probe for digital voltmeters is easy to make, if you don't have one! here's how:



The capacitor, diode and resistor should be in some sort of a shielded container, like Radio Shack's penlight flashlight, 61-2626. Break the glass light bulb, and clean out the broken glass. Then solder a heavy sewing needle to the center lug of the threaded bulb base on the inside of the base. Fill the inside of the empty lamp base with epoxy to hold the needle into place. Solder the capacitor to the center lug of the threaded bulb base from the outside of the lamp base. Screw the lamp base back into its threaded holder. Solder the cathode of the diode to the lamp base or to the lamp base housing (ground). Solder the anode of the diode to the free lead of the capacitor. Solder the resistor to this same point.

Solder a pair of wires, one red and one black: red to the free end of the resistor and black to the cathode of the diode. Remove the push button assembly from the flashlight and pass these two wires out the hole at the ass end of the flaslight. Voila! An RF-Probe for your digitial voltmeter!

You now need only install the plugs on the ends of the red & black wires to mate with your voltmeter.

The RF Probe samples a portion of high frequency AC (audio) or RF signal to about 100-MHz, and converts it to a DC level that is proportional to the AC or RF level, and which is suitable for input to a voltmeter, which otherwise cannot measure RF. A handly little tool for receiver alignments!

Do you feel Bills messages in this news group don't belong?

Have you read a message thinking it was about something else and
discovered it was Bill again?

Don't know what to do? Here's a suggestion......

Why not reply to Bill with a copy of every message you feel is
unfit to be in this group plus your comments in return.

Send the public post back to him. Tell him it does not belong
..do it the right way. Be nice about it. He may be to stupid to
understand. Flood him with his own crap.

if only 10 persons send his 7 messages back in one day that's 70
messages for him to wait for and possibly read,reply or delete.

I don't suggest emailing him your largest file before you go to sleep
it might get you in trouble if you send a 10 Meg file trough email
once by mistake. Your ISP may get upset.

The Garmin GPS-45 is a good buy at about $270-280 from Boater's World.

The Magelan 4000 has been on sale at discounters (Damark) for about $250. There are significant differences though:

GPS-45 GPS 4000
Comp output yes Nope
Ext antenna yes Nope (GPS-45 antenna swivels and uses an ordinary BNC connector. You can use it at the end of a short cable on the end of a pack frame, or use an optional vehicular antenna)

Software save to pc yes NOpe Optional cost cable ($35) and software (free on internet or $125 from Garmin) saves/restores stored waypoints

Waterproof yes ?? Gps45 is nitrogen filled. Mine has gone for a swim and survived. The battery compartment is not sealed - blew it out with compressed air, put in new batteries, and away it went.

Anyhow, I'd look for computer interface capability, external antenna, and water proof as key features. Right now the GPS-45 meets all those. It runs about 10 hours on 4 duracells. The software /user interface is excellent - they built it to be operated with one thumb, while doing something else like driving a boat.

Try the GPS45. $280 Boater's World.

Features: Ext antenna (bnc connector), water proof, data in/out.

siegman@ee.stanford.edu (A. E. Siegman) wrote:

>scanner with an rs-232 board. I have yet to get an answer, all I get from the
>radio shack managers is that they are either too expensive or that no one will
>buy them.

Radio Shack must carry all items in all company stores...about 3,000 of them. Each store generally must have 1 for display and another backup of each model. That's 6,000 scanners with RS-232 in them. Their wareshouse must have several for each store, so that makes 9 to 12 thousand scanners. The company must sell a couple or more per store per year to make it profitable. That is 18,000 to 24,000 per year. Figure that Uniden has similar requirements and you have 36,000 to 48,000 scanners per year for the industry. Over 3 years, let's say, you have...well you can multiply...you end up with a lot of scanners that must be sold to make it profitable.

Companies have people who research future sales, and they may have determined that currently there are not enough buyers of such scanners to make it worth their while yet. (Key word is "yet.") I remember this same discussion about 10 years ago when 800 MHz was new...and now those type of scanners are commonplace. I feel confident it will happen.

Personally, I would like to see a scanner that comes as a base model, but has expansion ports like a computer so you can buy options that you want and plug 'em in. Maybe someday...

Andy

If you follow the GPS newgroup posts, there are a significant
number of posts from people that are dissatisfied with both
Garmin and Magellen products. This only products that
have virtually universally satisfied customers are those of
the Eagle/Lowrance products, the Accunav Sport, or the
Global Map Sport. I have an Global Map Sport, and its is
an excellent, accurate and robust device. They cost a little
more but you get what you pay for.

This happened late one night.

"Control, Station 94, be advised the plones are not working at this time."

You could then hear engine 93 come up on the air and state:

"It might help if you plug them in!"

I got this from a different newsgroup so I cannot take credit for it. Engine 25 was responding to a reported structure fire.

"Control, engine 25 on scene at 12735 S. Maple, we have nothing showing from a <pause> "Hey Bates, count dem floors.""

4288. Funny Motorway aerials

Newsgroup: rec.radio.scanner
Date: 1996-07-28 00:00:00 UTC
From: Jack McEwen <jaymac@zetnet.co.uk>
Message-ID: <19960728194403710 54@zetnet.co.uk>
Source record: 228492

Hello all, I have been noticing some strange aerials at the side of the motorways. They consist of a metal support pole with two colinear aerials at the top. One is spaced about 6 inches from the pole and the other is about 3 feet away on the other side. I have tried to draw a diagram below.

Has anyone any idea what they are for.

```
___________
| || |
| || |
Colinear--> | || | <-- Colinear
| || |
| || |
| || |
|------||-|
||
||
||
||<-- Pole
||
||
```

Cheers,,,,,,,Jack.

> Johnson, Prince Edward, & Frank Sinatra really only count as one thing,
> especially when they were all entered by the same person.

You lie like a rug, Mackey. There are NO messages from "Frank
Sinatra"; "Lyndon Johnson"; or "Prince Edward" on the SCANRADIO
conference. You must have checked your CB RADIO conference.....

Pity you don't back up anything you post. But, here, I will do it FOR
you. Check the bottom of this post for a nice report on the message
base of the FidoNet SCANRADIO conference. It's pretty easy to tell
what's what, most importantly of which is that you're up to your old
lying, low-life self. The SCANRADIO conference has become a nice high
quality forum since you and Mister Duff went on to bigger and better
things.

>> Yes? Well, they're here because they can't be kicked off.

> TRUE, & I'll best it really pisses you off.

Nope. Doesn't bother me a bit to see you "acting".......

>> Don't you see what is happening?

> Yes Bill we do see are that's why we are acting.

Acting like what, assholes? :-) Now see below, WingNut!!!

Pardon the more public response. Try a local marine supply store
to get a hands-on demo. Try one of the larger mail order places
like Grove, Universal Radio, or EEB. I think you will find a few
ads in a copy of "Monitoring Times" magazine.

KAM>: What is the address for MINI-CIRCUITS? Or phone/e-mail?

Mini-Circuits voice: (718) 934-4500
P.O. Box 350166 fax: (718) 332-4661
Brooklyn, New York Internet: http://www.minicircuits.com
11235-0003

Mini-Circuits catalog (they call it HANDBOOK, and it is, sort of)
is over 700 pp. That catalog is also found (partially) in EEM
and Microwave Product Data Directory. For prototypes and R&D
assemblies they have good quality at an excellent price (for smaller
quantities of VHF-microwave components). Some of their line require
minimum purchase quantities, typically 5 each: Model ZOS VCOs are
$120 singles but are in a hogged aluminum case with SMA connectors;
Model POS VCOs (dual-inline case) are $12 in quantities 5 to 49; nearly
the same specs. Filters, couplers, mixers in many case styles and
connectors are in abundance.

You'll find that he didn't flame anyone at all, and therefore doesn't
really deserve going on your kill list. He was in fact doing what all
the rest of us wanted to do, but didn't - asked people to QUIT the
flaming. But oh no, you go ahead and use your new toy, the 'kill
list' on everyone. You'll end up with no posts.

It would, I'm sure. Eliminates a couple hundred possibilities of error
right off.

> Are these still available as a seperate item?

Yes.

> If they are available as seperate items, I think the only other things
> I would need at this point are the CPU, and an external case.

I'll get back to you by e-mail email with info on most of what you
need, however what did you mean by "external case"? If a metal box
into which the CE-232 is to be installed, I don't supply them, but the
Radio Shack #270-253 is what we use for custom assemblies and
installations. It offers plenty of room in which to work and drilling
or cutouts are not that difficult. I'll get back to you on the rest.

Rgds,

Bill

Why do I have to show it? That's called "exhibitionism" which is
illegal. Besides, if I showed it, you'd be hit with a massive trauma
and inferiority attack. Puh-leeze, let's avoid that sort of thing.

> These flames will go on forever and I'll be writing your life story

Put your money where your mouth is. Write!

>STOP ANSWERING EVERY POST WITH YOUR TOILET MOUTH ATTACKS ON EVERYTHING
>THAT MOVES AND TALK ABOUT SCANNING!

I answer only a few that merit some attention. Like you, fer
instance. You've been sniveling and begging for a pop up side the
chops, and I have really been trying to avoid it. After all, I hate
to pick on mentally deficient AOL posters and out-of-work piano
teachers.

> Okay, so the gang of five hundred hates your guts. Deal with it and go on.

Five hundred? <gasp!> No shit? Five hundred? <wheeze>

> You'r not perfect, even though that is what you think.

You've gotta be pulling my leg.

> If you have any decency you would also admit that you're not entirely
> blamesless in all of this as you make out you are.

Aw, horseshit, AOL-poster....who said I was "blameless"? I'm here,
aren't I? If I weren't, I guess it wouldn't happen, eh? But then
maybe they'd line up to have some of your AOL patooty?

>You want everyone else to back off,

Ohhhhhh noooooo, AOL-poster, I said NOTHING about backing off, up,
down, or in. I'm a real up front sort of dude. Sorry to break that
news to ya, but that's the way it is, pal.

> so why don't you start doing what you want everyone else to do?

I have. Don't you read? But every time I do post something useful,
the Magnificent Five jump on it like stink jumps on shit.

Here, I have an idea.....let's do Ohm's Law: Ready?

THE CURRENT IN A CIRCUIT IS EQUAL TO APPLIED VOLTAGE DIVIDED BY THE SERIES-EQUIVALENT RESISTANCE AS SEEN FROM THE FEEDDPOINTS OF THE APPLIED VOLTAGE.

I = E / R

Would you be interested in some Kirchoff, Thevenin, and La Place while we're at it? Or is that above an AOL-poster's cognitive abilities?

You tell me, Mr. AOL-Poster.

But you behave much worse than Bill does, because your only contributions are
negative.
Why does it bother you so much that Bill makes these claims? Does it bother you
that much that someone knows more than you do? Or that someone actually posts
information when you can't (or at least don't)?
Why is it that people who don't agree with you are ass-kissers, while those who
do agree with you are so intelligent?
Maybe a little introspection into your feelings of inadequacy are in order.

>BC> my SCANNER MODIFICATION HANDBOOK, available from leading mail order
>BC> radio dealers everywhere. ISBN 0-939780-14-3 published by CRB
>BC> Research Books, Inc. Commack, NY.

>C'mon Willy...lay low for a while and I'll do the same !

Say WHAT? Beg your pardon? WHAT is wrong with the above? There is no
"ADVERTISING masquerade" as you put it. You're totally out of order!
And you wonder why I question your gene pool and what branch of the

lizard family is inbred into you?

Here, snotrag, sit down so I can tell you where the cow ate the cabbage. There is absolutely NOTHING off-color or in conflict of ANY interest with the above, whatsoever, not even in the teeniest, weeniest degree. Ponder, if you will (or can):

1. It is appropriate to use references to existing information where ever feasible to avoid redundancy, verbosity, and waste of bandwidth.

2. Some technical information simply is not conducive to being put into a newsgroup article for the sake of requisite graphics, photos, and verbose text. That is, a lot of information is suited strictly to a BOOK. And I will direct people to books as I see fit. I will judge that - NOT you.

3. S-meters, like the above, come in basically two forms: analog and LED. The LED meter fits paragraph (2) above.

4. I did NOT offer above that the BOOK could be purchased from me, even though it can. ($18.95 + S&H) I mentioned the PUBLISHER and a generic statement of

"leading mail order radio dealers everywhere."

Nothing wrong with THAT, Mister Judge Duff-Puff !!!!!

See, you sit there, all high and mighty, huffed, puffed, and duffed up, and don't know shit from Shinola about a few key, vital things .....CHIEF OF WHICH is that I do NOT make a dime from my first two books UNLESS I sell them myself. I do not receive *any* royalty, stipend, or ANY other form of remuneration of the sales of my two SCANNER MODIFICATION HANDBOOKS, (Vols 1 & 2) with the singular exception of the retail markup, *if* I sell them myself. But I did not offer above to sell 'em. I refered to ELSEWHERE, ya wingnut!

Therefore, even by the most conservative standards, I can (and WILL) make references to my books, as I see fit, without getting your royal blow-hard permission. You'd say nothing if I referred a fellow to "Joe Schablotnik's Scanner Hack Guide" and you will say nothing if I refer people to my SCANNER MODIFICATION HANDBOOKS. I wrote the damn things; I know what's in 'em; and the information does not exist anywhere else in MOST instances. And on top of it all, I don't make a dime from those books when sold by the Publisher or other dealers!!!!

Just like I don't make a dime from Joe Schablotnik's or Stephen King's books either, unless I sell 'em. You feel you are free to refer people to Optoelectronics? So do I. And so *am* I.......

And I damned well *am* feel free to refer people to the (my) SCANNER MODIFICATION HANDBOOKS, too. Yepper, my name is on 'em, but I got a raw deal from the publisher in those days because of ignorance on my part. I got paid a one-time amount to write those books - and I was

paid off .....years ago. The Publisher keeps the books in print; unique information is contained in them; and I will refer to them as I see fit........in perfectly good conscience.

HOWEVER......I will conduct myself in all other matters, too, as I see fit and best, and I will not pretend now or later to accede to your demands or stupid, preconceived notions of how you think I have to do it. I have my own ethics and standards, and they are good. They are very good, even if not to your standards. You are just going to have to get used to me walking in my own path and you in yours.

If I missed your point, then by all means, please feel free to elucidate it.....succinctly....clearly.........and to the point. Now shall we get on with our lives....you with yours, and me with mine? You minding your business and me minding mine. Comprende?

I believe that they pick up the "mobile extender" frequencies --
low-power signals that connect the cop's handheld back to the radio in
the car. Freqs will probably vary from state-to-state. Try searching
at http://www.perconcorp.com/db_srch.htm

Source record: 228256

Can anyone ID the location of the user on 418.300? It belongs to USPS and might be located in Central or North Jersey.

"Posts" are one of the unit ID's. "HQ" is the base ID and there is the mention of "officers". I've heard the base call to units in the 200, 500 and 600 series.

They also have access to other USPS radios as I've heard them mention this. Could it be a mail distribution center? Not a whole lot of activity and the signal is very weak at times, I wonder if it's rptr'd.

I also have a question on the use of codes like "Alpha is 76211", HQ responds by repeating Alpha's code. A short while later I hear "Alpha is 23211" and HQ repeats as above.

This sounds like it could be workers sorting mail but I've not heard any mention of mail, only the 5 digit numbers. Some unit ID's are Sam, Utah, Romeo, Adam, Zebra, Alpha, Delta, James Boy, Tango.

The only clue I usually hear is the mention of "Queens HQ". Does anyone know if 408.050 is still the input for 416.225?

Thanks,
LGS

The 2700 is being discontinued. Apparently, it couldn't meet the new
European emission standards, plus it does have more birdie problems than
some people like. I have one, and it works well for what I want to do with it.
My opinion is that for $209, it's a great buy, particularly if you want to
be able to upload/download scan and search banks... it has a full computer
control interface, quite similar to the AR-8000. It can be unblocked fairly
easily, if you want to get the cellular bands.

It really comes down to how you want to use it. I use mine primarily for
the avaiation bands, and around 40 Mhz and 900 Mhz. It does get Radio
Havana pretty well, and I can even set my watch by WWV all the way over
here on the East coast :)

I have a fair amount of info on my 2700 web page:

www.mv.com/users/wje/aor.html

which you can check out.

>What is the frequency I wonder...
>Dave
>

Umm... I don't think that this is correct. I had a BCT-2 for a good eight months or so, and it was explained to me that the scanner looks for the signal between the cruiser and the portable unit on the trooper's belt (the "repeater"). If it finds one, TAG!, you get the happy red light flashing.

Bearcat has come out with a couple new models, the BCT-7 and the BCT-10. I presume it has updated frequencies programmed in and I know that they now go for aircraft frequencies. I saw a bunch of BCT-10s for sale at WAL-MART.

Again, this is what I was told. Anybody have hard facts on this?

Outta here.

Like new condition with box, manual, and optional tone decoder.

500 channels, receives everything 25 - 1300 MHz except 520-760 MHz and the cellular band (can hear as 12xx MHz images). Alphanumeric naming of memories, auto-storage of frequencies, VFO control, direct entry of freq., telescoping right-angle antenna, 25 memory banks, high scan rate, etc.

I'd keep it but am not really using it much. Asking $275 including tone decode board.

First place that I would check out would be one of the Ham Radio Outlets, a chain of (as the name implies) ham radio stores. There are three or four each in both the L.A. area and the S.F. bay area, but only one in San Diego. While they are 90%+ Ham stuff, they carry some scanner hardware, and most scanner publications.

There is also a scanner and commercial radio store in Anaheim that I have bought a few things at. I believe it was near the intersection of La Palma and Euclid, and there was also a Ham Radio Outlet just a few stores away.

I do not know what you mean by "homing beacon"

Also am not familiar with BCT or BCT2, but have a BCT10 and BCT7
beartrackers.

If you mean to mobile repeaters that some agencies use, then yes, they
can be heard on most any scanner. As for the frequency, a little
investigation with a Police Call or such book should yield some
information. You might look for something used statewide with no base
stations.

Maybe if you provide us the information such as what state we can
help.

My overall opinion of the beartrackers is they are a good idea, but do
not work, especially since the state I live in does not use mobile
repeaters.

I like it. Most agree that it's RF capabilities are second to none.
The only thing that REALLY SUCKS is the minimum two second delay
before scan resumes. This is a real pain with 800 MHz trunking.

Daleh@Cais.com (Dale) asked:
> So what are these "Cellular freq's"?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

800-832 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM. Channels are 30 kHz apart. Mobiles
transmit 45 MHz below the base (824.040-848.970) and are usually
repeated by the base.
Channels 800-832 are also identified as Chs 991-1023.

Save yourself some trouble. Just squirt a little WD-40 into the pot.
Works great. Don't use the "standard" pot/tuner cleaner garbage..once you
use it then you are committed to using it every other month. Use WD-40
and you will only have to do it once.

It's time to break in my Radio Shack card. And to do that, I thought I would pick up a new scanner. Right now I'm using a PRO-50... just to get my feet wet. But now it's time to move up.
I'd like a handheld unit, not a tabletop. Also, the availability and type of modifications is also a consideration in this purchase. Sure, we're not supposed to be able to modify any of the new scanners, but I doubt they're all impregnable. At least 50 channels, and 800 MHz coverage is also a necessity because of the local police force.
Any suggestions?

Just thaught I'm mention an interesting frequency I discovered
a few monthe ago.

48.080 MHz (Can't quite remember off the top of my head whether
it's AM or NFM mode).

Don't know where it is transmitted from, but I can pick it
up OK in the south London area.

It seems to be used a lot by Sky News as a link from the studio to
the outside broadcast units. You can often hear the news programs
go out over this frequency, as well as messages to the OB units.
As far as I can see the only thing you don't get are the comercials
and the documentary programs.

Happy listening.

Richard.

Not upset..... that's a bad choice of words. It's just that two
can play that silly game, and I can play it much better than you, sir.
Sooner or later, your ISP will tire of the matter.....and you. Just
don't send me e-mail, and you will do fine. Keep it up, Katzenjammer,
and so shall I. Take that to the bank, sir.

>Here is what he sent me and my ISP.

Yes, that's right.....and it will grow as you escalate matters.

It's your call.

I Would appreciate any information to this make scanner / receiver:
Questions (in no particular order)

YUPITERU 7000 / 7100
~~~~~~~~~~~~~~~~~~~
1. Are they any good?
2. How do they compare to that of other scanners like Realistic etc?
3. Anyone know Yupiteru's Home page (if one exists!)
4. Can you connect a computer interface to it?
5. What is the Frequency range?
6. Does the scanner suffer vhf data interference
7. I have heared that they suffer from memory loss, is this so?

Many thanks in advance.

>Does anyone have suggestions for findign equipment to do this?
>

If you connect one anteanna (on the roof) to a preamplifier "booster"
and then the output to another anteanna (in the basement) you will
have problems.

The problem which occurrs is that the amplifier has a very wide band
width and will boost many signals (unless adequate filtering is
introduced). And worst of all, the anteanna on the output may produce
an impedance mismatch which will cause the booster to produce tons and
tons of RFI.

It will create RFI anyway. So, try it but beware.

If anyone has done this without any problems, let me know.

>I also have a question on the use of codes like "Alpha is 76211", HQ
>responds by repeating Alpha's code. A short while later I hear "Alpha is
>23211" and HQ repeats as above.

They are saying " Alpha is 76 211" unit Alpha tells 211 he is 10-76

Then "Alpha is 23211" means Alpha is 10-23 talking to 211.

I think these codes are 10 codes and unit numbers.

>
ANDY....
> There have been a number of comments made concerning the reason

>use "special pagers" to send "secret messages" to keep the media in
the
>dark.
You really don't know what the law does....do you?
This statement is false. Do you know what SUD units are?
These units carry special pagers which display analog
messages and are used in all operations where there is an
undercover cop involved.

Nothing goes out over the air or cellular when the bad guy
is dealing drugs and about to leave in his car. The use of
pagers comes into play here. There are many ways they use
them to communicate and your "logic" just don't work here.
This applies to big or small dept's....what I won't say is
how they use them....my sources conveyed this in "off the
record"....and besides, they are good people.

Andy...all this bullshit logic lessons dont apply in a
non-logic situation such as guns being used by 14 and younger young
tuffs or by druggers or turf tuffs who beat up little old ladies to
get their rocks off to please their "hood-lum" collections of feces.

If logic was applied as you said, then all cops would be able
to just "arrest anyone who walked down the street congregating
at a phone booth because that is where the illogic begins...the
phone calls to sell and deliver drugs....all a cop would have to
do if it was logical was to arrest all who used the phone.

All this mumbo jumbo based on what you read in a book which all
students read in college who take the course....don't apply in the
real world of "bad boys" kill people for the fun of it...fact.

you have 14 years of experience reading book on various
fallacies about what is real or imagined. Logic is what you
hold dear: logic tells me that because subject A is out at 2am
in hood where he don't live with a 9mm Repeater in his belt,
he ain't out to help little old ladies cross the street safely.

He's out to make a score...to defy logic and shoot or rob or
maim someone because that is what he does....no logic here.

Cops use 800 trunked because it's more versatile and helps keep
the system working more proficiently....bit about press later.

about the more secure programs....did you know that most 800
trunked systems are upgradeable to the newer system once it gets
perfected enough so as to come down in price.....where more
agencies can use it....remember: You can have one police dept in an
area of eight or more other depts from towns or cities....and they all
can use the system computer as their base....whereas the 800
trunked system is based on how many channels are given to a
given police agency....there are limits with 800 trunked....for those
who can use it. Not so with the digital .... it's open x's and 0's
the computer deals with at the central command. they just lease
the capacity out to other agencies who all they have to do is buy
the lower priced radios and antennae....

>>and

> A. $10,000,000 trunked system that offers little security.
> B. $100,000 DVP system that provide high security.
>Which one would you choose?
>
But the Press not having access is one of the bonuses the
police gets from the trunked system. Not having to deal with
the press all the time is a blessing for the cops....I speak
from 16 years of news dealings .... If I am not there, they
don't have to keep watch over me as I will find some way to
get in closer to the event to get coverage of.

"The cops hate the media and they hate dealing with the media."
>Some do, some don't...I don't have any numbers on that. My personal
>experience is that the media are one of the last considerations during

The cops prefer the media don't show up....then they don't ahve
to deal with the press at the scene...the cops prefer to have the media
call them after the facts when the official press release has been
dictated to and ok'd by watch commander.

San Jose cops....are antipress....they will do everything in
their power to keep the Press away from any scene they determine to be
CRIME SCENE....their definition only. They just don't care about the
Press and their treatment of keeping the press at bay when things are
news worthy to know more about. They don't have trunked. But they
are ready for it...they have the channels assigned. If they one day
get the trunked system, they are going to be very happy for one other
reason: Press won't show up as often. major drug busts won't be able
to be followed....but they already buddy up with the feds and use the
feds radios to coordinate the action to the arrest....

I question your 14 yrs again....info call-in to help police.
I myself have called in info to one police dept who was
unaware that there was a gun battle going on over the
hill between a bad guy opening fire upon a Sheriff Deputy

and CHP officer pinned down by this shooter. With that
call to dispatch there were en route about ten units to
that location immediately. He did not get away...they shot
him when he would not give up....butby the timem the
Sheriff dispatcher could find out where that shots fired
was coming from and then put it out .... they were already
on the scene calling for an ambulance.

Plus other incidents too numerous to got into that I was
able to pass on by listening to agencies working in the area
of th elocal police....who did not know they were there.
Trunking system interferesd with this pre-warning ability.

you are right when you say you don't know the media and their
modus operandi...I explained the gist of it in a post back a bit.

Your rambling on does nothing to the LOGIC pitch. NEWS is
not logical. When I give talks to classes I tell them that the
press brings forth facts which the cops don't want told according
to the scheduling of the facts the cops want to present. On
their schedule....the press being able to monitor freelay all the
traffic that goes down is able to provide facts as they went down, not
as the cops homogenized the facts to be read by a reporter.

The being able to hear unimpeded police traffic enables me and
others to know the full impact of what is NEWS worthy...the trunked
system interferes with this process. I have been at scenes where
what I got on video and what wsa reported by the cops don't jive
and are factually not true.

In covering news when a cop is involved in a shooting, the cops
don't want the press there. Period. With the trunked system
the press gets there usually after the bodies and the witnesses
are gone....that hampers the press in more reliable news
reporting if on scene quicker....

Trunked system radio impedes the fair and accurate documentation
of what went down in a logical manner....the trunked radio system
to th ecops is logical....to the press it is not.

That stories are reported don't mean that it is the way it went
down at that location I was at when I see it in a newspaper based
on a press release to the media from the agency handling it.

Just think what I won't be able to discern and respond to to get
video ro still coverage of when digital is adopted and utilized
to the full potential it portends.... plus the new computers will be
able to dispatch calls by radio signals to onboard computers more
sophisticated than those in use now.....

Your Logical Diatribe has no lesson when it comes to news
agencies being prevented by what trunked and digital
portends for th efuture

bill conduit
professional videographer chasing news stories for airing
on t.v. news shows.

Not true. Speedbird has been used for all flights in Australia that I know of
(I worked in air traffic control in the mid '80s and all British Airways
flights were called "Speedbir(add flight number)". And there were no Concorde
flights to Australia at the time.

> > flames), but these others are as useless as tits on a boar.
>
>
> Speaking of "useless as tits on a boar", I haven't seen you enter ANYTHING
> in here that was worth a shit.

I doubt you would be so hostile if this were false....hits really close to home, does it not?

Well, john....I have responded to numerous questions about specific models of radio - I have reposted many local frequencies for those who have asked (if I had them). I have posted on specific questions about radios that I have had experience with.

Just because you don't read the articles in a newsgroup does not mean that they are not there. And I suppose you have read EVERY article since last August?

All I see here is a coward. Someone who gets off on putting other people down.

You are such a coward that you can't even put a real email address here to respond to. Afraid that someone might point out THE TRUTH? And that it might be very different from how you see the world?

If you have such a valid point of view, why the false email address?

grow up john (probably not your real name either). Your point of view is worth as much as the email address you post along with it.

And no more of that "well, he started it" crap. All you want to do is discredit Mr. Cheek for whatever reason. Do it in email to him.....oh yeah, I forgot, as a COWARD you can't give out your real email address...what's the matter, afraid someone might figure out that you really ARE an idiot?

Oh, yeah.. I agree with you. I am of the mind that I can monitor whatever goes through my body.

However - To listen to someone without their knowledge or consent is invading their privacy. Most people have some idea that they have privacy on any phone (obviously false). It's ethically questionable to listen to them if they have this idea. I'm not sure how to explain how I feel about this. If they realize they very easily could be listened in on, then there wouldn't be much of an ethical problem. This makes no sense, eh.

In any case, I will listen to them. I may be invading their privacy by doing so, but as you said, they are invading mine. I never said I didn't do it.

I'm straddling the issue, arent I. Oh well.

Paul Mahler (pmahler@databased.com) wrote:
: If a scanner covers the same bands as a shortwave
: radio, what will a short wave radio do that a
: scanner won't, or what will a scanner do better or
: worse?

: Thanks!

A realy good scanner will do everything that a short wave radio
can do. A cheaper scanner will probably not handle things like
sideband transmissions, and may suffer from interference between
channels, as it is not designed for the specific purpose of
receiving shortwave radio. I would have thaught that most of
the cheaper scanners would not cover the shortwave band anyway.

One advantage of a scanner is that it can scan !!!
Ie. it can rapidly look through lots of different channels
until it finds one that is in use.

Another qadvantage is that it can receive a lot more besides
just shortwave.

Hope that helps you.

Richard.

>hope you do not take it personal when foolish people misuse their
>jealousy against you.

I really don't take it, period. Not personal. Not any way. This is virtuality.....which often resembles, but never equals reality. Yet our exemplary friends, PjB and Mackey, are each one-man looney tunes shows, and they sure can make a cacaphony of noise. It does get distracting.....but then it remains virtuality, no matter what it sounds like.

> Those of us that are interested in scanning,
>and not complaining, will always be grateful for your expertise.

Just like a few forums where I go for expertise at one thing or another. I sure appreciate it when people help me.

>Please keep up the good work, and I look forward to new books in the future!

We'll see about that..... but I'll always do my best to pass favors on down the line....as I sure have received plenty in my time. I just don't remember the looney tunes and freak shows of times past. Maybe they were there and I just didn't notice. I dunno.

No matter.....all's well.

> up by a scanner and used in conjunction with a radar detector as a BCT2?
> What is the frequency I wonder...
> Dave
>

Dave, it's not a homing beacon. The frequency is called a "mobile extender frequency". When a trooper walks out of his car, and uses his handie-talkie, it transmits on this extender frequency. The mobile transceiver picks up this frequency and rebroadcasts his transmission through the moble tranceiver. This in effect, gives him the same range as his mobile unit.
The obvious problem is that the BCT-2 or BCT-7 alarm will only activate if the handie talkie is being used, and therefore is not of much use. Additionally, the constant referring back to the extender frequencies by the scanner makes it annoying to listen to the HP frequencies.
Each state has a different mobile extender frequency. US Scanner news had a state-by-state listing in their Jan 1995 issue. It does not look complete, but if you tell me your state, I can give you the mobile extender frequency.

This type of activity and flaming does not belong here Billy please
take your games somewhere else.

Like I've asked you some 40-50 times now.

Any one else that does not feel this belongs here? If so then
please email Bill with a copy of every message he posts that
you feel does not belong here (such as flams) and tell him
so.

It seems he's getting hundreads of emails and is trying to now
take it up with my ISP. ...good luck

Sorry for the public post but with such a reply I had to respond.
This is the end of this one. Back to email. I see a few more of
billy's messages that need a reply.

By the way Bill if you want to talk to my ISP their number is.

>
This is correct....the Press have access to certain agencies
who allow them listening privileges....the Fire Dept's
are the easiest to get....the police dept you have to apply
and prove that you are a news gathering organization with
credentials, Press Pass, etc. You have to be licensed to
work in that city and more....plus you have to go through a
police check of your background activities.......

You then get their permission to use. YOu go out and buy the
radio system, 1500 plus, and take it to corp yard and they
program it for you. YOu get all the fire channels....in my
case eleven...and the police dispatch channels plus one service
channel....car to car.

What you don't get is: SUD channels, Homicide channels, Watch
Commander/Lieut channel; Vice; etc.
You do not get their TAC channels...this is where the really
good stuff is playing....but you can listen to it via scanner
if you can stand hearing where the dog catcher is or the street
dept is or others who share the system.

But the drawback is this: both fire and pd are on the same
radio. so when fire dept is really busy and pd gets going, you have
to get out of scan and concentrate on that one district where
the action is going down, but then you cannot hear what fire
is doing.... or vica versa.....

It's much better than a scanner, but not perfect.

Again...I don't pretend to know how the press works, so it would be a farce for me to try to tell you how you should conduct your business...what is important...what isn't, etc. All I am telling you is the way it is with cops. The press is not that important. You are something that we must occasionally deal with, but you are not something around which we make plans around. I don't know any polite way to put it, so there it is.

Also, I though you said no cops would admit to using pagers!?! Now we suddenly have a change in the story. Hmmmmmm.

Higly logical, Captain.

Andy

P.S. I don't intend to get personal at all. If I offend anyone it is not intended. Actually, if you guys lived around Kansas City I'd like to get together with an adult beverage and we could throw all sorts of verbal rocks at each other. (grin)

4392. Bill is upset with "mail bombing" Please read

Newsgroup: rec.radio.scanner

>
> Thanks,
>
> Bill Cheek
>
> ==
>

(He sent a copy of a message where I suggested everyone send him
mail..read on this is my reply and a CC to my ISP)

First of all, I can suggest the hole world mail bomb you Billy.

I can even post public messages suggesting others do it.

As long as I am not engaging in illagel activity, or misusing
my account privilages here at "Interlog" Nothing will be done.

What I do suggest is that my ISP and others, look into the Flaming,
threatening,
name calling and flooding of the newsgroup "rec.radio.scanner" that
you have been
doing for the past year now.

I'm sure my ISP and others IF they really care about hard drive space,
would
look into the above newsgroup and kill the "hundreads" of messages
that have
nothing to do with the newsgroup but instead are public posts to
promote your
flaming hobby.

But I don't think they have the time or energy to do so. What this means is that
its up to the public to police the newsgroup and let you know that what your doing
is wrong and unacceptable.

That is what I will continue to do If you don't like it, then clean up your act.

Have a nice day.

I use the amplified speaker from Radio Shack (21-541, $24.99). It
works great. The power automatically comes on when there is audio and
shuts down a couple minutes after audio has stopped. I leave it wired
to the battery so that I can use it even after I have turned off the
ignition. When you unplug the scanner, the power stays off.

Radio Shack PRO-43 Modifications FAQ
< Last modified March 8, 1996>

CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)
------------------------------------------------------------
1. Introduction

As long as there is a continuing demand for it, this mini-FAQ
about PRO-43 modifications will be posted every month or so.
In large part, it is the file PRO43.MOD from
pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
would be increased four-fold.
------------------------------------------------------------
2. Which units can be modified for extended frequency
(800 MHZ) reception?
```

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is not illegal to own equipment that can receive or can be modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial number and FCC-ID may not be perfect, that is, there may be some units judged modifiable by the serial number and nonmodifiable by the FCC-ID, and vice-versa. Anyone with a such a unit should send a message to gdallal@world.std.com so that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended

frequency reception

If you'd rather not do the modification for extended
frequency reception yourself, Cellular Security Group, 106
Western Avenue, Essex, MA 01929 (508/768-7486) will do it for
$40, which includes insured UPS return postage. However, CSG
will not move the diode to extend the low band to 88 MHz; they
only remove the diode to unlock the 800 MHz frequencies. When
CSG is mentioned on the net, two types of comments follow:
testimonials from satisfied customers and comments from those
with the technical skills claiming that the service seems high
priced for just removing the diode. But, there have been *no*
reports of shoddy work or damaged radios. (They've modified
two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will
perform the mod for $40 plus shipping. They will move (rather
than just remove) the diode in units that can benefit from it,
but state that there is no way to tell whether the diode
should be moved without looking inside. They claim that the
determination can not be made from the serial number, FCC-ID,
or date of manufacture. For further details, call Grove at
704/837-7081. In order to get a unit modified, a service
order number must be obtained from the same telephone number.
Packages without a SO# will be refused.
---
4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out
you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a
desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of
microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and
other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by
four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit),
remove the two screws from the lower circuit board. Looking down at
the unit, you will see that the screw on right side of the lower
circuit board can be easily removed. Remove the screw on the left side
by by sliding the screwdriver between the top circuit board and the
metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel
(antenna, volume, and squelch knobs) along with the top two circuit
boards as one unit. The two circuit boards will be connected to the
final circuit board (the one attached to the front section of the
scanner) by several wires. Simply set the top panel/circuit boards
alongside the front section of the scanner and you can leave these
wires connected.

Step 5

The microporcessor is located under the large metal shield on the final
board (the front section of the scanner with the display and keypad).
If you look under metal shield from the side closest to the bottom of
the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to
remove it completely (unless you want to use it to restore additional
frequencies as explained in other MODs), you can just lift one side so
it dosen't make connection and then put a small piece of tape or heat
shrink over it, so it won't. Make sure it's not lifted to high or the

boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

(This modification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu >

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend

antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

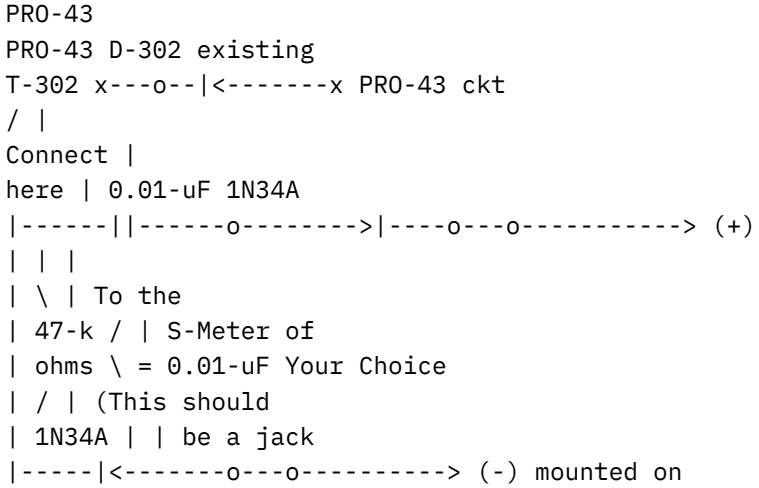
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|

2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode

3. o means a connection, preferably soldered

4. The 47-k resistor is self-explanatory, I hope.

5. -------- and | are wires/conductors.
|
|

6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:

```
5-k Trim Pot
(+) --------/\/\/\/\---o--------|
| | |
This should |-------| |
be a plug of +
some sort to The S-Meter
connect to the Terminals
mating jack on -
the scanner |
|
(-)----------------------------|
```

You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe

in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

Well, Lazy, I don't think so pal, LLPIX is anything but lazy. I work 24/7.
I would like to see you monitor "GET ME A UNIT AT BROAD, HOLD ON A SEC.."
"yAEH, THAT DOGS RUNNING LOOSEAGAIN, I'm gonna get a noose on him but a
womans also got a squirrel that she wants taken in uh,"
"It's Under, "
"That's affifmative"
"I got a man to run for you hold on a sec, I'll give ya his name when your
ready"
"Stuck on red and the other's on yellow. I'll be here a bit and the top
sign is fixed"
"Back up 12 car"
"Complained that her trash was not picked up & is blowing around,"
"Abandoned Vehicle"
"Accident investigation unit is here, radio"
"1 to radio"
Huh Toby, Pal, I think you would go nuts . I think you must be nuts
calling me lazy, you don;t even know me. I've given you several bits of
conversation here that are on a huge metro trunk.
Let's see you match up and follow each conversation, and know what's going
on.
The back up switched to a different location.
What's under?
Who cares about the Animal Control
Your listening to a cop run a guy through for investigation,
That's affirmative,
Any accident Investigation is WHERE????
Toby think first before you speak so you do not embarrass yourself again.
I never said media should be given radios I said we must be allowed to
purchase them (xmit disabled of course) so you the citizens will know
what is going on.

Well, I am in San Diego, I could put up some SDPD stuff. I have about 500k left of web space though, so I couldn't do much.

If someone wants to donate some web space, I can make some sound clips of SDPD. Lots of cool stuff last night heard including:

- Drug seller stakeout
- 11-99 call (first time I've heard one..) Officers being jumped by gang members. About 7 units responded "97" right after the "code 4"... :)
- Also a guy "unloading" his gun at the officers, noone was hit, the gun got loose into a crowd (!).. not sure what happened there, it was code 4 eventually.
- Tons more (saturday night, of course...)

- High speed (up to 120mph) motorcycle chase went right past my house the other day...
they stopped pursuing him eventually.. lots of controversy about chases here recently.

Only problem with recording SDPD is the fact that they are trunked. I don't always get the whole incident and other stuff gets in there.. (if only I had 20 800mhz scanners...) But I still get a lot of juicy stuff.

4408. Quick Call Question

Newsgroup: rec.radio.scanner
Date: 1996-07-29 00:00:00 UTC
From: cn1135@abaco.coastalnet.com
Message-ID: <4th7cf$9fp@treasure.coastalnet.com>
Source record: 228386

Greetings,

I am trying to convert Quick Call codes for Motorola Dispatcher to tone frequencies. I am able to convert the codes for mobiles and portables such as Code 125 is 746.8hz. But the codes for the dispatcher are different. After a recent power outage, the codes were input into the console as three digit codes(ex 218) with a one(1) placed in front of each code. Code 234 was entered as 1234.

I know that the station with Tone A as 746.8hz and Tone B as 669.9hz is given as code 253. My untested hypothesis is that 253(input at 1253) is a combination of the codes for tone A and B. I think that this may be so because Tone A has the QC code 125 and Tone B has 123--Hence the code (1)235.

Please post any information back to the newsgroup or email me direct.

Thanks,

Mark Prescott

I'm sorry about confusing the issue so much. As Bob
Parnass pointed out to me in e-mail, the BC-230 is an
updated BC-220 with some extra accessories.

About the only thing I said that was right was the
first paragraph: The BC-200 and BC-205 are the exact same
scanner. Which model number you get depends on where you buy
it. And that's the truthththhhthththpppp. :-)

>benefits of both systems and would choose the one that was better and
>cheaper, assuming radio security was the goal. Pretend you are the city
>council and you have to make a choice between two systems offered to keep
>the media from listening. You have to pick from:

Huh? What? Where did you find politicians that
understand technical stuff? If politicians understood
radio, we would not be saddled with ECPA in place of
widespread and not-all-that-expensive use of encryption in
cellular phone systems. Bad argument.

>experience is that the media are one of the last considerations during
>decision making in law enforcement. First comes things like officer

If you're speaking in a tactical sense, you're right
- to a point. If you mean strategic decision making, then
the media come under consideration much sooner. That's why
departments have (or are supposed to have) a PIO. The PIO
is assigned and trained in advance of the "big call" to
handle media inquiries when it happens.

Even during a major incident, a department without a
predesignated PIO will rapidly discover the need to assign
one. This will happen long before anyone has to worry about
reliefs and food for officers working the incident.

>and the hostage negotiators by phone one at a time! I know of NO agency
>that uses pagers instead of a radio for dispatching. Of course, we won't
>admit that we use 'em for that. (grin)

I wouldn't dismiss it out of hand. And using MDTs
for dispatch DOES happen, with the same general effect as
using pagers would have - nobody can listen in without
special equipment. Pagers ARE being phased in for dispatch
of non-police incidents in my county, with an expressed
intent of eliminating initial voice dispatch on alarms.

>it's irritating...but I can keep up with what is happening. Reporters
>can, too.

In my community, at least at the TV stations and the
larger radio stations, "reporters" don't monitor anything.
The Assignment Editor does any monitoring, along with other
studio-related duties that prevent a lot of hands-on
intensive interaction with the radio equipment. If trunking
when online in my area, that might change, but more likely
they would issue the news media enough dispatch receivers to
cover their base locations. It is doubtful that every one of
the hundreds of people in my county with press credentials
would get a radio.

>own ideas on the subject. I always thought that a reporter was just
>that...a reporter. He watched what went by in the world, and reported
>what he saw. No personal opinion, no bias, no slanted objectivity...just

That's what they teach us in High School, but
reality clearly differs. There are still a few reporters
(relatively speaking) who uphold the ideal of the reporter
as a plain mirror of events. There are a lot more who try to
BE the news rather than just reporting it.

>implement trunking systems are equally suspect to me. It makes me wonder
>if the media aren't trying to hide something by offering to the public
>what they want them to know, instead of offering the raw facts. (THAT
>ought to light up the switchboard!)

That's a given. :-)

Source record: 228390

Do you feel Bills messages in this news group don't belong?

Have you read a message thinking it was about something else and
discovered it was Bill again?

Don't know what to do? Here's a suggestion......

Why not reply to Bill with a copy of every message you feel is
unfit to be in this group plus your comments in return.

Send the public post back to him. Tell him it does not belong
..do it the right way. Be nice about it. He may be to stupid to
understand. Flood him with his own crap.

if only 10 persons send his 7 messages back in one day that's 70
messages for him to wait for and possibly read,reply or delete.

I don't suggest emailing him your largest file before you go to sleep
it might get you in trouble if you send a 10 Meg file trough email
once by mistake. Your ISP may get upset.

Message-ID: <4tjldo$kid@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 228104

I've been monitoring some of the activity since the crash and have seen quite a few posts for freq's in use.

Recently though, 163.050 was finally mentioned. It's been in use for a while but mostly encrypted. Since it's out on the net already, I'll add a bit more to what's been said about it.

It is used as a pager freq for medical personnel but it is also used by the FBI. Prevous use was the old FBI system (output on lower freq, input on higher freq) it designation was B7, OCDE.

The input was 167.725, the rptr was at the Empire State Bldg. I last heard Cobra units on it in '94 when it was a bit more active. I did hear comm out of Connecticut in '95 but do not have any info on the Conn. use.

If you're looking for more activity, try using some of the older FBI designations as they are still on line, just not used as much.

Yes, it's possible it's being shared w/USCG as it is one of their LANT freq's. Has anyone checked the PL to see if there are two users?

I understand that Seattle/King County has recenly switched to an 800 MHz trunked system and stopped many previously existing VHF/UHF simulcasts. I will be in the Seattle/Mercer Island/Bellevue area, and I am looking for any VHF/UHF fire/ems/medical helicopter freqiencies that are still confirmed as active.

Obviously I cannot get this information from a frequency guide, as this change was recent, and the guides would not know what was still being simulcast.

I am interested in any fire/EMS (not really police, though) frequencies that can be heard in the area. Even frequencies for other municipalities or counties which are recievable in the Seattle area are of interest to me. I am also wondering if Seattle FD and/or King County FD still simulcasts some or all dispatches on their VHF/UHF channels, and if so, which channels they are simulcast on.

I would appreciate it if any replies could be carbon-copied to my e-mail address, because my news server can be interminably slow and unreliable.

Thanks in advance.

Just purchased a Uniden Sportcat (Bearcat) scanner..you know, the one that comes in yellow or black. The ad said NO CELLULAR but an advertisement on the net said cellular was imaged on 896-9something, and sure enough it is:) Not bad for $120, I love it. I can finally listen to those damn loud ass planes going over my house.
Anyone know of a way to mod this to get .1 - 1000MHZ (or greater)?
or possibly just more coverage.. like all of 800-999, but .1-1000 would be nice.
Thanx in advance,
Danny

I have heard that Trimble Navigation has one of the best units.
No idea of the price. They're located in San Jose, California.
Might be worth giving them a call.

Check out this exciting new scanner newsgroup:

rec.radio.romper.room

This was created just for Bill Cheek and friends (well, enemies actually)!

Come watch them piss and shit on each other! Make threats and talk about eating each other's shorts! See who has the biggest dick! Watch as they eat each other's shit and crap out even nastier smelling shit! "I know you are but what am I" name calling wars! See them run to ISPs and bitch when they are hurt (Mommy, mommy, look what he did, he started it...)! See them make up hysterical biographies on each other! Will Cheek get the last word? If not, then who????

So, come and check out this latest newgroup! Stop wading through all of this boring scanner shit! You want freqs? Buy a CD-ROM! You want Mods? Buy one of those mod books! You want advice on a scanner purchase? Ask your local Radio Shack guys! You want fun, excitement, filth, and slime? You want to see human excrement just as it is pinched off by the sphincter? Come and subscribe to rec.radio.romper.room!!!!!

>>use it for business.

Take a chill pill, sonny. Tell ya what -- I'll mount my whole damn
cordless phone base unit on top of a flagpole, ok?

Will THAT satisfy your finely-honed sense of right and wrong?

Or does your kode-O-vethics demand that I keep my antenna buried
inside my aluminum house, surrounded by metal computer equipment and
shelving, so as to protect your precious band.

Guess what, ol' pal O mine -- take yer "that's one bunch you don't
want to mess with" rant, roll it up tight, and stick it where the son
don't shine, ok? Maybe that nonsense works on the kids down the block,
but as a response to a simple, honest, and reasonable question, it
sucks double-plus-ungood.

Sheesh, what an anal bunch. If sticking an antenna on an extension
cable threatens your identity THAT much, I'll GLADLY build a
weatherproof box for the whole stinkin' base! Ok????? Will that make
you happy, Master???

Btw, try laying off the coffee for a day or two, eh?

Getting a little more specific than the state laws...Here in
Rochester, NY a local law prohibits the posession of a portable
"device capable of recieving police or fire transmissions" (scanner)
anywhere (car home, or on your person). Although as was stated
before, I'm not sure that the law is enforced very often.

Try ftp.funet.fi /pub/ham/scanner, you will find complete information
on POCSAG standard such as frame formats, baud rates, and so on.
Also you can find the PD/PE utilities to decode/encode pager
transmissions. No idea on other pager standards.

4445. Mobile Scanner Laws For All States?

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: Radioman@localnet.com
Message-ID: <4tjpr3$ti2@prometheus.localnet.com>
Source record: 228132

Noticed a party looking to know the Ohio mibile scanner laws.I don't know that one, but thought for the benefit of all interested that we might get some dialogue going that may eventually lead to a factual list of ALL the states various mobile scanner laws. I live in New York State. Here you may have a mobile scanner if you are a licensed amateur radio operator or a law enforcement officer or have a valid authorization signed by your local police chief or sheriff. Of course, volunteer / paid firemen; EMT's and similarly engaged individuals would rarely encounter any problem with a police officer if stopped and the unit was observed. In this state there are provisions in both the Vehicle & Traffic law and the Penal Code. I recently retired as apolice officer and can honestly say that I don't recall ever bothering the average individual who was stopped for some other reason and I would notice a scanner. Of course, if the scanner were to help facilitate the comission of a crime, then it turns into a different story.

Any information on some of the other states????

It is my understanding that the Pro-2036 is essentially the same scanner as the Uniden BC890-XLT. That being the case, here is the mod sheet I have for the 890. Proceed with caution as I cannot confirm this information. Hope this helps.

Glenn Reed, KF5XB
CAP - OKWG/DCA

==========

BC890XLT

Subject: bc890xlt-800mhz full restore

1. remove all cabinet screws.
2. remove 4 face plate screws and 1 bracket screw at center of main board.
3. carefully depress the outside edges of faceplate shield and tilt down.
4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.
5. remove faceplate and logic board.
6. position board so microprocessor chip is on left and memory battery on right.
7. locate the 3 chip resistors at chips upper right..marked 104 and carefully desolder.
8. install the chip resistor at the 2 empty pads closest to memory battery.
9. reassemble carefully in reverse order.
10. test by entering freq. around 870 mhz.

Yo, PjB:

Whatthehell're these posts I found from you over on the <soc.support.depression.treatment> newsgroup? No wonder you come off so dang sick. You ARE sick, fella. Is THIS why you act here the way you do?

Look dude, I have plenty of empathy and consideration for the ill and the less-fortunate, but man, it's getting real old being at the center of your cross-hairs all the time. I think the below explains a good deal about you......just for a random sampling. Fundamentally and philosophically speaking, this would be a good time to give it a rest; take a chill pill; and get back to scanners and scanning. If you don't, the tables are going to turn.

Comprende?

I've changed from zoloft to serzone w/ buspar. Been on them for 4 wks. Never felt worse.
I don't think the serzone is going to cut it. Anybody else w/ this experience? I don't seem to be reading much about serzone here.
BTW, to top it all off, not only am I depressed but my libido has taken a major nose dive as well. I thought serzone was supposed to be free of these effects. Hmmm......

Subject: Dizzy After Stopping SSRI's?
From: tvine@teleport.com (PjB)
Date: 1996/01/09
Message-Id: <tvine-0901962246290001@ip-pdx02-62.teleport.com>
Organization: thornyvinemusic
Newsgroups: soc.support.depression.treatment

PROZAC: one year, stopped because of intolerable wired, buzzy, can't-lie-still insomnia. Sex was dysfunctional.
ZOLOFT: Two months. Stopped because of same type of insomnia. Sex was totally dysfunctional.

SERZONE: One day after stopping Zoloft I started Serzone (about 5 days ago). 50mg twice a day. Too early to tell if the serzone is going to help the depressions, but sex drive and function is returning. But I am experiencing dizzy spells alot, like when I get up from sitting down. It is frequently quite pronounced. I have also noticed a subtle but noticable numbness around the lips and mouth, although I think that is subsiding now. Any comments appreciated. Has anyone had any luck going from zoloft/prozac to Serzone? TIA.....

> know.

All British Airways flights use the Air Traffic Callsign "Speedbird" not
just Concorde flights. The only scheduled Concorde flights are BA001 - BA004
on the LHR-JFK-LHR flights. Flight BA102 from Damascus to Heathrow would be
heard as "Speedbird 102" just as any other BA flight would be Speedbird.

All British Airways flights on Timetables, Tickets, Flight Plans etc are
reffered to as "BAxxxx.

BA flights on the internal Shuttle services between LHR and Manchester,
Belast, Glasgow and Edinburgh use the Air Traffic Callsign "Shuttle xxxxx"

4455. Mail Bombs , B.C. is getting upset.

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: ronkatz@interlog.com
Message-ID: <31fe42b2.3032782@news.interlog.com>
Source record: 228142

Bill seems to be upset that I have started some type of campain
to e-mail bomb him. He sent the below to my ISP and as far as I know
he as not received any reply.

As I have said before. If you find Bills Post are unacceptable
and do not belong here, simply respond to them via email and send them
back to him with your short message on top telling him so.

(5 of his messages replied to by 10 persons is 50 e-mails a day)

I'm sorry that Mr. Cheek is receiving hundreads of emails and this
may be uspsetting him but he can stop this by cleaning up his act.

Bill Cheek wrote:
>
> ATTN: postmaster
>
> This is my SECOND request that you enjoin your user, Ron Katz,
> to STOP the e-mail bomb campaign.
>
> Thank you.
>
> Bill Cheek

Mr. Cheek did you not understand my last few requests?

Again I'm not interested in your junk mail, your activity on the
rec.radio.scanner news group has not changed either.

People still find it unacceptable.

What you fail to understand Mr Cheek, is that this is not
simply a "campain to mail bomb you" I have suggested that
everyone reply to your public posts by mailing you back a
copy of your post with their feelings noted. Your offencive posts
are just so numerous that what you get is hundreads of replys
in return.

You do the math Cheek, 10 of your posts and 5 upset persons is only
50 replys a day. Clean up your act and people will stop.

As long as you enjoy these games and continue others will always
try and police your activities.

-Bill Cheek-

This file is identical to the previous two except that this one is
formatted for dBase III (*.DBF), for EASY importing into most any
database manager or spreadsheet. Simply cut the portion of the
article between the [Cut Here] lines and save it as a text file. Then
run UUDECODE to break out the ALOC_DB3.DBF file. Database files are
much more powerful than tab/space columnar formatting!

I am a new scanner enthusiast looking to buy a scanner in the
$200-300 price range. Any opinions/recommendations on what is
the best scanner availabe today in this price range?
Also, what current Radio Shack scanner is the equivalent to the
PRO-2006, as far as features & price? Please respond via email.
Thank in advance.....

Are you morons aware that you can be prosecuted for your mailbombing activities?

It's idiots like you who will end up getting the net regulated to hell and back.

Morons...

> Might be worth giving them a call.Either a Trimble or Eagle are the best. Do NOT get a low cost Garmin,
such as the Garmin 20. They will not track under foilage, and take a
long time to acquire a fix in field conditions. Basic problem is
that the Garmin only have one tracking channel. The Eagle has five.
Five channels use more batteries at a time, but the time period to
acquire a fix is very short, so the batteries last. I have an Eagle
that works well in all conditions and tracks through overhead leaves.
Various reports on the internet claim that the Trimble also tracks
well. The original Eagle does not have UTM, but uses lat/long. It also
has an excellent graphical display. There is a new Eagle model that
supposedly support UTM. I have not yet seen it.
The Trimble has only readouts, but has UTM.

There are more med channel than Med-1 through Med-10. There is also HEAR
and MEDNET. Some areas have different freqs. for those areas too!
If you are in CA (California), I can post what I have for Southern
California. I have some for Nothern California, but I haven't used all of
them so I can't confirm them.

> Dave
>

I assume your trying to detect a speed trap before you get to it. Don't bother. When a trooper is set up at a speed trap, they don't have any need to use their radio unless they think someone is suspicious.

I got a speeding ticket in Arizona this past weekend and I was monitoring with my scanner (Base, Mobile, Air and Extender) and I didn't pick him up at all. BTW, it was a totaly bogus ticket because the speed changed from 75 to 55 and I didn't have time to slow down (nailed me at 65).

4464. Re: Raleigh - Durham, North Carolina Freqs NEEDED !

John - I also have a sportcat scanner and really enjoy it. I paid around $120 for mine from Best Stores (a higher quality priced K-mart/Walmart/Target). I pick up cellular from around 894.xxx to about 916.xxx. This is nice but I have a problem because the local police are going to a trunked system which is in that range. Needless to say I can't pick up the police when they switch. I have no complaints other than that though. I have had my scanner for about 3-4 years now and still enjoy it. Have fun and happy scanning.

Brian

4466. I need mod for PRO-2026 for 800mhz restoration

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: 3PO <tony3po@computek.net>
Message-ID: <31FED864.5F1A@computek.net>

Does anyone have or know where I can get the procedures for modifying a
RS Pro-2026 to restore the 800mhz freq? I would appreciate any feedback.

3PO

4467. Motorola VHF Marine

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: "C. Wheeler" <cwheeler@ccnet.com>
Message-ID: <31FEEB1E.801@ccnet.com>
Source record: 228154
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

A post is a boating newsgroup raised my curiosity about this...

Does anyone know if Motorola makes a hand-held VHF marine tranceiver?

The last time I asked our account rep from Motorola about this he said that they didn't. In addition it does not appear that they make a programable radio (from their LMR line) that is type accepted for marine.

Curtis

Racer0069 (racer0069@aol.com) wrote:
: You don't want any catalogs or flyers yet you love going to the Shack to
: shop! Maybe it's just me but I like to know whats on sale from month to
: month BEFORE I go shopping. What's the big deal anyway, the salesperson
: is only doing their job. It is their job to ask you for that information,
: it's like they really care who you are, especially when they've bent over

Tony,

I think you are missing the point the last gentleman was trying to
make. I like to know whats on sale from month to month BEFORE I go shopping
too. And yes, it is 'just the salesperson's job'. Just because it is
the persons job doesn't make it any less an invasion of privacy.

: backwards to help you and then you're rude to them because they asked you

I have *NEVER* had a RS salesperson 'bend over backwards'. If you want to
see that, you have to be wealthy-looking and asking about an overpriced
$4000.00 computer system they sell.

: who you are!!!!! I love it when someone tells me they're in a hurry, I
: ring up those .39 cent resistors slower than you can imagine ! ! ! ! You

Well that is certainly customer satisfaction isn't it? It seems like you
are glad to inconvience customers. And you wonder why customers are rude?!

: should try working on the other side of the counter just once and see what
: it's like dealing with people who don't know how to hook a VCR up or need
: a cordless phone battery but don't know which one they need and didn't
: bring in the old one, I guess we're suppose to be mind readers also!!!

I *HAVE* worked on the other side of the counter for years and years. And YES,
there were rude customers. Yes, I was treated badly. No, there is no reason
for it. Never once did I screw a customer over by purposely slowing down
a transaction. I smiled and said, "Thank you, and have a nice day." No need
to lower yourself to their standards.

And as far as hooking up a VCR and needing a battery, what do you think your
job description is? It's your job to serve these people. To help these
people. Do you think they would really be asking you if they knew what they
were talking about?

: Get a life! I could think of better things to bitch about!

I could too, but I'd say bitching about an invasion of privacy ranks pretty
high. Respect this man's right to privacy.

If I had more free time or cared more about the information they store, I don't care WHOSE job it is, I would give them a hard time. It's not the salesperson we are against here, it's Radio Shack's policy that we disagree with. Obviously, the only way to express our dissatisfaction with the policy is through the only front end we see, and thats you.

I don't mean to flame you, I just think you are offbase with your message.

Keith

4469. Bombs - e-mail type

Newsgroup: rec.radio.scanner

To the e-mail bombers, ala:

Ronnie Katzenjammer
Peetie Joe Boe
Johnnie Limpid Smackey, Jr.
Huffen Duffenmeister
Tim Pecan-pie
et al:

Suit yourselves, boys. But do take stock that it's probably costing you money to -=try=- to pork out my mail box. Unfortunately, your sandbox antics don't work so well. Tsk....tsk.....tsk..... 'sniff.

Look - boys, girls, or whatever you are.....you've caused me only the slightest temporary inconvenience that has now been amply compensated. It's easy, if you know what you're doing. I've implemented methods that render your silly games more impotent than Peetie Joe Boe when he quaffs double hits of Serzone and Depo-Provera on the rocks. (Remember that one, Peetie? <smile>)

What's more, you still leave yourselves open to official or even legal sanctions, if you persist with this increasingly sinister game.

I'm immune to your silly e-mail bombs. Your forgeries of my name and ID on the PERVERT/SEX groups haven't been discussed yet, but will backfire on you in an.......ummmmmm......perverse sort of way. <grin>

Have we only begun to play? Or shall we perhaps retire to the boring study of scanners and scanning?

Next, please?

Look out, guys. There are different models in the Sportcat line, to the best of my knowledge. My SC150 cost $189 about 10 months ago, and the last I saw it, it had dropped to about $170.

Give up hope for any mods, though.

4473. Re: USPS radio usage

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: "Louis G. Shirley" <lgshirley@mail.worldnet.att.net>
Message-ID: <4tm31i$1gg@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 228160

Thanks for the quick reply. I should have posted more info on the USPS to help solicit what I was after, my post was a bit in haste but here is a bit more info about what I'm hearing w/the USPS.

When I mentioned hearing the 5 digit code, I should have posted it as a sequence of 76xxx and 23xxx looking like this:

King to HQ 76302 (then)
King 23302
King 76303
King 23303
King 76304
King 23304

The unit "King" works his route with the msg that he is 76. My guess is that this means he has arrived at site 302. When he finishes, he states he is 23 (at 302).

He always talks to HQ (headquarters) which has been heard IDing as "Control" on other freq's, so we know that this is USPS. They log his activity. The sequence continues upward 303, 304, 305 until he has finished his route.

All the activity here happens in NYC (Radio City, 18th East 48st). There are a lot of units involved, King, Mary, Nancy, Alpha, Lima, Victor, Oscar, Peter, Whiskey, Zebra, Quincy, Yankee, James Boy, Sam, Tango, Delta, probably more.

So my guess is they are emptying mailboxes in NYC, only a guess. I have heard other units accompanying them. "Bronx Sgt is with King at 303" was one response.

On another occasion a I copied, "877 to HQ, unit is Nancy's "shadow" today. Unknown if they all get "shadows" from time to time but it sounds right for internal security.

Concerning the 10 codes mentioned in a post. I have heard a unit state: "Lima to HQ, 10-24, 311, 76312". They do use 10 codes and the 23 and 76 may be part of that. The last 3 digits are the location as best as I can figure. The 76/23 sequence continues until the route is finished, then they head to Base 9.

When they finish their work you'll may hear, "Lima is 23329", HQ responds "have a good day, that was a quick job today". I've then heard units state they were done and at "Base 9". I've also heard HQ call Base 9 on 418.300 to ask if the unit was really there. Guess they check up on the carrier's time with USPS security and the "Base".

Hope this adds a bit more detail to what I previously posted. I have never heard NJ conduct anything like the above but then in the City things are done differently.

Most of activity in NJ is carried out w/o fanfare, they don't use radios as best as I can tell but inspectors and other surveillance personnel do. 415.050/407.725 (ch3) is the normal pair used as they tail the target whether he be a carrier or someone stealing mail. (Simulcast is on 169.375 and 170.600)

The USPS in NJ relies heavily on video and voice surveillance equipment. I've heard them hiding a TV transmitter inside a Mailboxes etc. Everything is also video taped. It really makes it hard to purloin the mail then tell the judge you didn't do it when you smiled for the camera.

I've heard them follow carriers too. They always have a video camera with them. I guess the "shadow" and those Sgt's in NYC may be doing something of a simular nature.

But the NYC stuff is new and I'd like to learn more about how they conduct business. I appreciate the posts from Oratory and JW, sorry I didn't post more precise info 1st.

Be happy to share more USPS info w/you. If anyone can post a bit more about the above notes, I'd appreciate it.

BTW, NJ tractor trailers are heard using 170.775s back in '90 and I have heard them still using it not all that long ago. And I used to hear trailers being moved and loaded on 171.2625, probably out of Secaucus. The lower 400 meg band is monitored but I only hear DOE out my way. Any specific freq's to monitor?

Thanks again for the posts and any future posts.

The pager notification services all use common carrier
services such as MobileMedia or SkyPage (or others) to carry
their traffic. You will most definitely hear a carrier, but
that will tell you nothing about any particular paging
customer.

There are 10 designated frequencies (nationwide) called MED-1 thru
MED-10. I don't have them handy, but I can look them up when I get home.
Most scanner books will have them (Monitor America, Police Call, etc..)
Most ambulances operate on these ten channels...

Hello,

You know I just read this group mainly for information and
tips.....but as of late it seems to me that some members of the group
are once again making personal attacks against others....

Why must "you guys" attack others in this public newsgroup.....????
If you have something to say to a specific user why not send it to
them in private e-mail....??? and if it is has the potential to be
inflammatory, then why post it at all???

I don't care to debate who is right or wrong.....the point is
this.....personal attacks don't belong in a public forum....no matter
who is right or wrong, or who did what....

If you want to call someone names or make judgements on their ethics,
moral character, family heritage, or just call them obscene names then
why not do it in private e-mail.....where the rest of us don't have to
wade through all this garbage...

** Just my personal view.....as an observer **

4483. Aircraft Sequences

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: JBallard@ebicom.net
Message-ID: <31FEF83B.48D5@ebicom.net>
Source record: 228170

Let me see if I can answer these questions.

departure
A/C contact ground control before and during taxi then control tower for take off instructions. After takeoff the aircraft will contact departure for instructions on leaving the area. from there air traffic control give the aircraft instructions.

Aircraft position from the Airport will determine which freq it will use.

example
-a/c approaching from east will use freq assigned to that sector.
-a/c departing to south will use freq assigned to that sector.
-each runway usally has its own contol tower frequency.

Arrival

Air traffic control hands a/c off to approach control.
Approach control hands off to tower then tower hands a/c to ground control after departing runway for taxiway.

This is the condensed version of the procedure.

The Avaiation communication equipment does not need a lot of power to tx. They have qreat line of site communication. the air craft are either close on the ground or in the air with nothing to obstruct communication.

hope this helps.

4484. Re: DC to Daylight question

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC

Message-ID: <01bb7e76$2837b200$2ee100cf@legend-408-cd>
Source record: 228171

In the world of wireless communications the frequencies are spread out from extremely low frequencies (down in the low audio range) up to extremely high frequencies that are on the verge of visible light (well not that high yet..but..). Within this spread there are different types of receivers that specialize in limited(?) coverage such as short-wave (2 to 30 MHz) and FM radios 88-108Mhz, AM radios 560-1710Khz etc. Along came several communications receivers (scanners?) that covered more of the communications band and some that covered both the communications band and the broadcast band (VHF Lo, VHF Hi, UHF, UHF-T, 800Mhz etc.). "Then" we come to the receiver (or scanner if you will) that covers all of the above PLUS. These usually do not have any gaps or breaks between the frequency bands (except for you-know-what!) and cover (on the low side) from 100khz to (on the high side) 2Ghz (2 gigahertz = 2,000megahertz = 2,000,000 kilohertz). Since the range is so vast they refer to them a DC (low side) to Light (High side) in a sorta mild sarcastic tone since nothing else out there can come close. Didja get all that????

Fred

I'm not aware of any statute(s) that e-mail bombing violates. Which law(s) do you think apply to this activity? As far as I know, the Computer Fraud and Abuse Act of 1986 does not cover this sort of activity (or spamming, for that matter). It's the only federal computer crime statute that I'm aware of.

I'm not so sure that e-mail bombing is likely to lead to censorship either, but I'd be willing to hear why you think so. Thanks.

: "It might help if you plug them in!"

Similar story.

Ventura County engines 52, 54, 50 and battalion chief 5 were responding to a report of smoke from the Arco Solar Chemical building in Camarillo, CA a few years ago. This place has some chemicals that could easily wipe out a couple thousand people if they get loose. But this was just too funny.

"E52: Ventura Engine 52 on scene, one story tilt-up, wwe have what appears to be steam coming from the roof."

B5: "Engine 52, battalion 5, about 2 out, stage about 2 blocks out."

E52: "Battalion 5, advise tactical page."

B5: "Oh damn, I don't have my pre-paln book! Ventura Battalion 5 will be delayed in response, I need to return to station 54 for equipment."

As I was pulling up on scene, battalion 5 was heading *away* from the scene code 3 as he returned to the station to get his tactical book. It did turn out to be simply steam.

And just the other night, the same captain who was involved in the stuck in mud story came up with another great one when responded to a rubbish fire.

"Ventura, Engine 35 on scene, one story couch, fully involved."

Doug
Depends....software is great now and updates can be downloaded from
their Website.
You will have to experiment with antennas as the receive is very
broadband. I have several scanners including an Icom R7100 which more
than satisfies my gradually narrowing listening interests....I tend to
listen more to fewer frequencies now....I suppose I have become too
lazy to push the Winradio envelope.
The main attraction of Winradio is it's massive capacity for memories.
Yeah, its probably worth the money.
Brian

John McClellan <maus@skypoint.com> wrote:

>(dispatch) "car 2, be advised, neighbor is reporting a group of six males
>wearing all black carrying large clubs gathered behing the Recruiting Center"
>
>(few seconds later)
>(SWAT team) "dispatch, this is 1280, THATS US!!"

[etc]

That's like the same ol' thing you hear on the Calgary Police Service frequencies all too often. "All units heading to the 1033 (suspicious person), description as follows: Adult male about six-two, wearing all black, with a baseball cap, and carrying a pistol. Be advised he also appears to have a German Shepherd with him."

"Uh, 1401." (district sgt)

"1401." (dispatcher answering)

"Didn't you say about 2 seconds ago that K9 was out at that scene?"

"Oh.. um.. 4336?"

"Yeah, that's me, Dispatch."

:)

Or.. "Bravo 44 from 1401. Where are you guys?"
"Calgary."

But the ones *I* like are the fire dispatches. I spent 2 months in a Calgary firehall as part of a college program and heard the following dispatch one sunny afternoon.

"19 Aerial, this is a service call, to map [whatever], address [something], uh.. the homeowner there says there's a squirrel in the tree in their front yard and it hasn't moved for days, they'd like you to check it out. Zone 4, tac 6."

They actually went.. the last thing I heard the Lt. on the aerial say was "Squirrel's OK, we're returning in service."

They do lots of weird ones.. 'squirrel in tree', 'cat in tree' (of course), and yes, 'bird in tree'.. now when you hear that, don't you just say to yourself 'now wait a second, something's wrong here'?

I can't count how many people have their lights flicker/toilet overflow/etc and call the FD around here, but that's more stupid calls than funny calls.

How about the fire-alarms call where three officers all broke their legs? There's a cartoon circulating around the dept. with three guys lying on the ground all bandaged up and the driver shouting into his portable "Repeat! DON'T send any more help."

4496. AR8000, narrow AM filter mod

Newsgroup: rec.radio.scanner
Date: 1996-07-30 00:00:00 UTC
From: klimasewski@fccvde.enet.dec.com
Message-ID: <4tlau0$ebh@mrnews.mro.dec.com>
Source record: 228203

I have designed a switching scheme that allows the user to select
the stock 12KHz AM filter or the narrow SSB 4.0KHz while still in
the AM mode. I have found this to make a BIG difference when trying
to receive a weak shortwave station next to a very strong one.
The only part required is a switch and some wire.
My mod has no effect on the use of the DS8000 speech inversion accessory.

Send me email if interested.

The Ideas are all good. The only problem I can see coming is waking up to a disk full message due to Hard drive space... Though not on the same exact subject if this is to improve audio Another suggestion would be to use a set of amplified speakers for the system if the audio is lousy (like on my handheld).

copied from the Internet:
Newsgroups: rec.radio.shortwave
From:
parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Subject: Trick the old Bearcat
BC-220 to search 136-144 MHz
x
Trick the Bearcat BC220 to

Search 136 - 144 MHz

Here's a trick for altering
the frequency limits of the
early version of the BC220, which appears
in Grove's
"The Best of 1982 Monitoring Times".

I no longer have my
BC220 and haven't tried this trick.

To search 136 - 144 MHz:

1.
turn the set off and on to clear the memory
2. manua
lly select any channel
3. enter 136.0 MHz
4. enter 144.0 and
press LIMIT
5. press SEARCH (reads ERROR)
6. press LIMIT (reads
136.0 MHz)
7. press SEARCH

You may restrict this out of band
search sequence
further once steps 1 through 7 h
ave been executed.
While the receiver is searching, open the squelch

at
whatever frequency you would like to select as the
upper
search limit; then:

a. press 136.0 LIMIT
b. press SEARCH
(reads ERROR)
c. press LIMIT (reads the frequency at which
you
stopped searching)
d. press SEARCH and close squelch
again to resume
searching

A number of frequency ranges may
be substituted for the
example above, but only in the early versions of
the
BC220 with the older microprocessors.

While, I can't really tell... It sounds like it very well could be the postal inspector. Especially if there is low activity. As far as I know, most USPS Trucks don't have radios and unless you live close to an office, I don't think that you would here interoffice radios.

Just a thought.

>greatly appreaciated..
> Thanks,
> Butch

I don't think you'll find many freq's at ft. sill "in the clear"
thats is unscrambled. From the couple of yrs I spent there the only
clear frequencies I remember were the mp's and range control.....I
think range control is somewhere around 30.??

I got out of the army in 91 so its been some time. I was with an MLRS
unit there...and when we went " to the field" (war games) one week
out of the month all of our communication was through secure means.

The only clear channel was range control for safety reasons..

At ft sill most of the tactical comms will actually be computer
traffic...at least with MLRS ...

most of the live fires are late at night....you might catch something
on range control then.....mostly stuff about clearance to fire on a
certain impact area or clearance to begin firing....times and stuff
like that.....

things may have changed now....I know that before I got out....the
army mlrs units were going to a new radio system....so freqs may have
changed...

As one who follows the GPS newsgroup because I plan to purchase a GPS, I've read nothing bad about the
Trimble Products. They do cost somewhat more, however.

The Eagle products you mention also get uniformly high marks, except some people feel (sometimes strongly)
that their lack of the UTM coordinate system makes them less than ideal for backpacking.

You said it all Joe!!

The few that continue to use this forum to vent thier childish
frustrations ruin it for the rest. I to have posted questions
with few if any replys. But everyone sure has time to blast
each other. Sometimes putting technology in the hans of the
less than mature is a dangerous thing!!!!!!
Time to grow-up and move on people!
Bill

==========Joseph Cardani, 7/28/96==========

That's IT!

After posting several question in this newsgroup and getting _ZERO_
responses, I HAVE HAD ENOUGH!!!! You are more worried about flaming
each other, than answering "simple" questions!

I have posted several good articles here over the past few months,
especially information about the NJSP fleet/subfleet listings. And I
also answered questions from other postings. But no more! I HAVE HAD
ENOUGH!

I will stay to the local scanner newsgroup, at least there is no
flamming there, and to the listgroup where the postings are moderated.

Joe

4513. Scanstar or Scancat?

USA FCC Frequency Spectrum Allocations
535 kHz to 1300 MHz
(Comma-delimited ASCII format)
==========

This article/file is for the benefit of all.

(c) 1996 <All Rights Reserved> Bill Cheek-COMMtronics Engineering

This article/file is for personal use only and may NOT be placed on a CD-ROM nor any other media that conveys, stores, or transports for any monetary cost, without expressed permission of the author. This file can only be given away, absolutely free of charge.

-Bill Cheek-

This file is identical to the previous one in TAB/Space delimited format except that this one is comma-delimited, for EASY importing into most any database manager or spreadsheet. Simply cut the portion of the article between the [Cut Here] lines and save it as a text file. Then call up your favorite database manager to import it. Much more powerful than tab/space columnar formatting!

Ver 7-30-96

FYI: those interested in the FidoNet SCANRADIO forum that has been brought up here from time to time.

The below piece of drivel posted there by John Kaose has no purpose and no meaning, and is the kind of thing that will get him the heave-ho if he does it again. And when he does get the Size 13 crosswise, you can bet he will come here sniveling and whining about what I did to him and "his rights"..... sheesh!

All in all, I was in a good mood and just warned Mr. Kaose. If he violates the rules again, he'll be evicted. Since the Fido processes have been put to question in THIS honorable forum in the past, I thought I'd share with you an event that has not yet become history, but which may.

PID: ProBoard 2.15 Sr
I was just on the internet newsgroup REC.RADIO.SCANNER &
BILL CHEEKS is getting beat up pretty good. It sounds
like they are fed up with him there.

A couple of the people are formerly of this echo, most only
know him from the internet.

Very interesting reading.

Ed,

Any idea what the difference between the 45 and the 45XL might be?

Harold

I have been hoping that I could refrain from commenting or involving myself in any fashion in the Flame Wars that keep RE-OCCURING on this news group. Sorry folks, I fould my soap-box last night.

I have a limited amount of time in my schedule to pursue my hobbies and interests, one of which is radio communications, equipment, etc.. The main reason I frequent this news group is to find new or interesting information on radio related topics. I have obtained a tremendous amount of information, some good, some bad, some very questionable on this and other news groups of its type. If I have wanted specific information or opinions and ideas on a subject, many of you have supplied, or pointed me to a possible source. I have learned something useful from "almost" everyone involved in the latest round of WARS. These news groups are a valuable resource to me, that I enjoy exploring, and will continue to us them as long as they remain so.

The constant bickering, name calling, or what ever you care to call it is getting real old. In the past few weeks as much as 50% of the post have been this junk. Its a waste of my time, your time, and the resources available to all of us via this medium. If the focus of this group was devoted to an adolescent subject I could understand why this type of behavior was so rampant. If a person unfamiliar with the on-going events were to drop in they would think it was a bunch of kids posting much of the content lately. I'm not sure if this post is really appropriate for this group.

I am not pointing fingers, taking sides, or saying anyone is wrong or wrong right. There is a place for almost everything in this world including Flame Wars, "BUT THIS IS NOT IT". Again many of the people involved have provided me with very useful information and ideas, directly or in-directly in the past few years. A lot of the information posted to others has been useful to myself also.

Everyone has the right to there own opinions, ideas, and points of view. Everyone also has the right to express there opinions in any legal manner they want. (including news groups) There is little to nothing most of us can do to stop these events, I can't tell anyone to do this or to quit doing that. It is not necessary or appreciated (by many of us) to fire off a hostile reply or opinion to everything posted you don't agree with, or think is stupid or ignorant (because you already happen to know everthing there is to know about the subject) to the news group or for that matter to there personal e-mail. But you do have the right to do so if you wish. it's not breaking any laws as far as I know. (although you might be better advised by an attorney, instead of someone with an

opinion :)

It may be a mistake to involve myself in this matter, and I am sure I will receive my share of flames for doing so. (just in case anyone cares, I will NOT respond to any flames, you can call me what you want.. Its easy for a persons to talk when they think there just a name on the computer screen "little do they know")

All of the above are my personal opinions, they in no way reflect the opinions, ideas, or feelings of my employers. Thanks to anyone that spent the time to read this. Hope all of you the best of luck.

Best Regards,

Mickey Hill

Recommend you consider the Uniden/Bearcat BC3000XLT portable instead.
It's a better performer than the PRO-26 and has twice as
many channels.

For more info, read the full length reviews in Monitoring
Times magazine:

Apr 1995 - Uniden/Bearcat BC3000XLT Portable
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT

Note: Reprints of Monitoring Times articles are available
for $2.00 each (plus self addressed stamped envelope) from
Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel.
(800)438-8155. I wrote the reviews but don't receive any
part of this $2.00.

What you hear reference to is a small cylindrical-shaped tube attached to the outside of the CVR/FDR which makes a "pinging" sound. Unaudible to humans, however, to allow the authorities to more easily finds the boxes especially under difficult circumstances.

Hello All:

While listening to the news reports of the crash site and the authorities search for the black boxes, I think I remember hearing that the boxes send out a signal so they may be more easily found.

Is it possible they would emit a signal on the VUH/UHF ELT aviation bands (121.5 /243.0 mHz??)

Anyone have information on the black boxes???

Just curious...

TIA, Jeff

I now have a complete frequency list from .2 Mhz to 23.4 Ghz for all of Nova Scotia. It took me about 60 hours to get this list done. I had to go though 105 Megs of text to end up with 1 Meg. of text for Nova Scotia. I will send anyone a copy for $ 10.00 cdn (including disk and shipping) The disk is a 3.5 " type. It has everything on it from drive-thru frequencies to all repeater in and out frequencies as well. If you are serious about getting your own copy, then Email me and I will give you my postal address.

Greg
glapierre@seimac.com

PS: This is no way connected to my work place.
I have just completed the latest list accurate as of July 19/96. I will include both lists as I have sold several diskettes already ! ! !

Thank you , Bill for taking the time and trouble to give us so much information on these radios. I can readily see your joy in doing this sort of work in your writing. I , too have been smelling the rosin smoke for 30+ years. I bought both of your scanner mods books, and I smiled for a week after reading them and trying out some of the stuff in them. Don`t let the idiots of the world bring you down, Bill. They are all jealous of some one who knows something more than them, or who insists on just a nominal fee for their hard work. They all want something for nothing. Your scanner books are worth EVERY PENNY I PAID FOR THEM AND MORE. You have helped me to further my knowledge of these radios and how they work immeasurably, and I am forever in your debt for it. This last file, where you gave the pro-43 s-meter information to them for free, is a good example of your generosity, Bill. If you were as crass and commercial as they say, then how come that happened ha ha. I think that file kind of shut their mouths for them. I don`t see many of the flamers actually contributing much of anything on the group. Typical. Like I said, they know nothing, and hate anyone who does. Keep on taking joy in your work, and take heart, some of us enjoy it immensely. I will be looking forward to getting another good bargain on your next book.....73

Check out the mass merchandisers sporting goods section first. Out here in Ohio Mijers (Largest department/grocery store around) they sell a handheld for $199.00. I'd stay away from RS and Sears. There's plenty of other places that sell the same (There are only about 4 manufacturers of GPS equipment and their sources of the chips are limited to Motorola and Rockwell - Sony has to buy the chips from Rockwell!) units at various prices and are more competitive....good luck....

"Someone
who is interested"??? Heh heh heh. Yeah, I don't listen to
the CMT ban
d, either. That ECPA has got me just _petrified_, hi. :-)
I got these off a
bulletin board.

+----------------------------+
| Modifications for the 2005
|

```
+----------------------------+
There is a socket that is not marked so it
will be referred to as D501.

D501 and D503 removed : Scan r
ate of 6/12 cps
D501 only installed : Scan rate of 7/14 cps
*D503 only
installed : Scan rate of 8/16 cps
D501 and D503 installed : Scan
rate of 10/20 cps (horray!)
*D502 installed : Disable 823.95-850.95
MHz and
868.95-895.95 M
Hz
D502 removed : Full coverage from 760-1300 MHz
D504
installed : Normal spacing for all bands.
*D504 removed
: Enable 30 kHz spacing in areas
restored by
D502 removal
* = Stock US model configuration

+--------------------
--------+
| Modifications for the 2004 |
+----------------------------+

1.
Remove diode from "513" to get excluded 800 MHz freqs.
2. Install a 1N914
diode in "514" to increase scan rate to 10/20
channels-per-second.
3.
Install a 1N914 diode in "510" to get the extra 100 channels.
4. Rem
ove diode from "D-44" to restore missing frequencies in th
806 to 960MHz
band.
5. Remove diode from "D-45" to restore coverage from 68 to
88MHz.
------------------------------------------------------------------
In
step 5 above, I have no idea what this is for. My 2004 came
from the store
already scanning this range, and this was the first
I had ever heard of it.
The same goes for step 4. When I removed
D513 (as in step 1), I got those
freqs back. Perhaps the user who
```

originally posted these had a radio from a
different production
run. All I can "vouch" for is steps 1, 2, and
3.

I dispatched officers on our last night work at about 0600 for "...a large number of balloons in some telephone wires." Officers arrived on location stating that there were "approx. 75-100 balloons in the wires and to notifiy Bel-Tel."

About 30 mins. later, in a high-pitched, squeeky voice, my Sergeant advised me that "Bel-Tel was on the scene and they would remove the remaining 50 balloons from the wires."

Maybe it was the midnights, but I laughed 'till shift end.

If you could be so lucky as to find a extension speaker used in the Motorola car kit for the flip phone, grab it.. I have 3 of them is service and will buy any I can find.. I have paid around 4 to 8 bucks at swapfests.. they are small rectangular, so they don't hang down low, and they sound great.

BTW anyone reading this that has any , I am in the market.
The 14.95 square speaker from radio shack is no comparison.. I have one here I would give to the first person walking in the yard !

Jim

When I'm in my car I use a magnet mount cellular antenna. I simply cut
off the screw on connecter, and replaced it with a BNC no solder from
Radio Shack. I think they also have ones that convert screw on to BNC so
you won't have to cut it and could still use it for cell. It covers the
freq's I monitor just fine. i.e. 150's, 464's and 800's

Can't believe someone would really try to sell this radio at $300.
I don't know if he gets the hint why people haven't been flocking
to him.

Maybe try $150 guy....that radio is not worth the price...

In article <t$k8$FAOSxEwD9@cf45.demon.co.uk> (posted to rec.radio.scanner on Mon, 29 Jul 1996 22:40:30 +0100), Anthony Davies <adavies@cf45.demon.co.uk> writes:

= 1. Are they any good?

I have an MVT-7100. I'm very happy with it.

= 2. How do they compare to that of other scanners like Realistic etc?

I've never owned another consumer-type scanner. I have a couple of older 2m amateur radio transceivers which scan, but I'm not sure that comparing them to the Yupi makes any sense. The Yupi is prone to intermod, while my 2m rigs are not, but the 2m rigs do not have general coverage receivers.

= 4. Can you connect a computer interface to it?

As far as I know, the MVT-7100 does not have a computer interface port. I'm sure it was not advertised as having one, and there's not mention of one in the users manual.

= 5. What is the Frequency range?

I believe the MVT-7100 frequency range is specified as 150 kHz to 1650 MHz, but you can apparently enter and tune to frequencies as low as 50 kHz.

= 6. Does the scanner suffer vhf data interference

If by "vhf data interference" you mean intermodulation distortion ("intermod") from paging and other data services operating at VHF, the answer is yes (it also has a few birdies). I have also noticed quite a bit of intermod from local AM broadcast transmitters (MW) when listening to shortwave frequencies. It is a significant problem when using the "search" and "scan" functions because the scanner will stop on frequencies where there really isn't a signal. When you're trying to receive a signal on a known frequency (i.e., you're not "scanning" or "searching"), intermod is less of a problem. In my experience, if the MVT-7100 is tuned to a particular frequency which is subject to intermod, a strong signal actually on that frequency will overcome the intermod signal.

The MVT-7100 provides a couple of tools which mitigate the intermod problem somewhat:

(1) there is facility to mark a large number of frequencies (I recall 1000, but I may be wrong) which will be passed over when in search mode. So, for example, if you notice that a local paging transmitter which creates a false signal on a particular frequency, you can easily mark that frequency and it will be passed over when in search mode; and

(2) there is an attenuator which almost always eliminates the intermod (but of course, the signal you are trying to receive must be reasonably strong).

I should point out that I typically use my MVT-7100 in the Chicago, Illinois USA metropolitan area, which I believe has an unusually high density of RF transmitters of various sorts, compared to most other places. If you live in an area that is less saturated with RF, you may notice less of an intermod problem. In addition, I would be surprised if the other handheld DC-daylight receivers currently available at finite prices will provide significantly better resistance to intermod, but I'd be delighted to be proven wrong.

= 7. I have heared that they suffer from memory loss, is this so?

I have not experienced this problem.

> indeed without integrity, honor or compassion.

Well, then, Mister Michael Alexander (who just can't ever stifle himself for very long), there may be a LOT that your know-it-all, judgmental, pompous, sanctimonious self just doesn't know.

Perhaps Mr. Boe and I see eye to eye? You won't know, though.

But I will tell you this....write it down. Read Edgar Guest's poem, "IF" for a groundbreaker. And then observe.....

When I walk with kings, I -=am=- a king.
When I walk with common men, I -=am=- a common man.
When I swim the sewers with riff-raff and low-lifes like yourself, I become riff-raff and low-life, too.

Don't shoot at me with a .22-cal pistol, Mister Michael Alexander, and then whine and snivel when I shoot back with a .457 Winchester Magnum. Don't swim like a turd in a punch bowl and then yell when I piss on you.

When a contract is broken, it is broken. It is not a matter of degree, you blithering, blabbering, jaundiced, self-annointed ministerial nincompoop!

Geezus H. Kriste, what horse did you ride in on this time? Who appointed you the Great Saviour of Mankind, anyway?

Behold, a pale horse ridden by Hizoner Michael Alexander, the Magnificent, the Great, the Benefactor.....

And then you woke up. Sheesh.....some people's kids! Your Paw oughta be horsewhipped for not drowning you that first year. Or do you got a Paw? I'm thinking of the possibilities of a Virgin Birth... maybe the first example of asexual reproduction in Humans.

Beat it, dude. Scoot! Shoo, fly! Vamoose! Scram! Tuit suite!

>they are complaining to your system administrator, then they are
>complaining to you about you?!? I gotta laugh at that one.....

ISP = Internet Service Provider

I am "lord and master" over my domain, to be sure, but
I connect to the Internet via CTSNet. Almost all
"authority" in networking is militantly hierarchical,
so my ISP was the target of Katz' latest slander.
If they thought I was a "bad customer", they could
cut me off in a twinkling.....like I can cut off those
within my domain.

Of course, now that he lied, Katz incurs the same risk,
albeit a greater one.

I have been trying to figure out what the H/S button on my
PRO-26 does. The manual says it turns on HyperScan, but I
really can't tell any difference. Every time I hit the
button it takes the PRIority function. (I have tried shift
on and off) Does it really turn on HyperScan, or HyperSearch mode?

Any advice would be appreciated.

Thanks,

Bob

Chances are the car is as tuned as it can get. You could try the very expensive shielded ignition cables, but it's doubtful that would help much.

Better still might be a magnet mount antenna installed as far to the rear of the vehicle as possible, away from the engine area.

Are you powering the scanner from the vehicle's electrical system and are you using an external antenna?

Try walking around the vehicle with the engine running (scanner and its rubber duckie) and see how far away you can get before the noise is lost. Get closer and see if you can peg the radiation point(s).

Report on results and maybe we can figure something out.

Rgds,

Bill Cheek

Chris,

I had a BCT10 & returned it after 3 days. Audio was terrible, no 800 mhz coverage, very poor reception.

Bought a BCT7 which is tons better, has 800 mhz coverage & user programable freqs. I bought a coiled cord & sit it on my passenger seat or in my center console.

Scott

PS,

The BCT10 didn't even cover my local 460 mhz Police freqs, which have been the same for at least 6 years.

4557. OS456 or CE232

Newsgroup: rec.radio.scanner
Date: 1996-07-31 00:00:00 UTC
From: Ultrix <ultrix@aimnet.com>
Message-ID: <32002BF5.361A@aimnet.com>
Source record: 228010

I am curious about the difference between the OS456 and the CE232.
From preliminary info I can see the the OS456 is the superior interface for
the PRO 2006. But would like to get a little bit more info on the CE232.
The type of info that I am looking for is features, and a little bit of
technical insight on how the device actually interfaces with the scanner.
From what I have heard, the OS456 interfaces into the Microcontroller in the
Pro 2006. Is this true?? How does the CE232 do it?? I am just interested
in making an un-biased comparison of the two interfaces to fully understand
schemes and engineering. OptoScan makes the OS456, who makes the CE232???
Any info appreciated....

Ultrix@aimnet.com

In First Ammendment cases, a phrase often used is `reasonable expectation of privacy'. How could anyone expect privacy over a devise using radio waves? If he did expect privacy, would his expectation be reasonable?

CSIS, in addition to using the RCMP 420 MHz freqs, uses 220-222 MHz as a low power system. They use mostly handhelds, 2-5 watts out.

Radio Shack makes an amplified mobile speaker. I have been using one for a few years and it works well.

Here are a couple of my favorites:

Desk Sergeant: "The unit that just wrote a ticket at Wal Mart respond."
205: "205"
Desk Sergeant: "Return to Wal Mart and meet with a subject. You wrote her a ticket for parking in a senior citizen's space."
205: "How will I find the woman."
Desk Sergeant (laughing): Look for the angry one at the service desk.

204: "204. Stopping persuit on Cobbs Ford Road by the Amaco Station. I'll also be requiring assistance."
Dispatcher: "204, are you stuck."
204 (in a an embarassed quiet voice): "10-4".

He had gone into persuit of a speeding vehicle on a straight road, ran off the road and got stuck.

304: "10-26 (stopping vehicle) 10-55 (dui) at 4th and main. Tag number xxxxxx."
a couple of minutes later, 304: "10-100a (attempting to out run patrol car.)"
Dispatcher: "304, location and speed?"
304: "Highway 82 intersection. (in a pitiful voice) He's only going 35 but he won't yeeeiiiillllddd."

There used to be one officer who would be listening to his radio, but would never respond immediately.
Dispatcher: "204?"
No answer
Dispatcher "204?" (she knew he was listening)
no answer.
Dispatcher (to supervisor): "201. See if you can raise 204. When you raise him, advise him that his house is on fire."
204: "10-84 Code 2!!"

He started answering promptly after that incident.

I used to have a friend who was the general manager of our local 911 service. She would tell me the REALLY funny stuff that would never make it out over the radio. They had an intercom system with the desk sergeant and he would make fun of the less-sharp officers.

Everyone is entitled to their opinions and even to express them. You expressed yours as eloquently as any and greatly better than most. Furthermore, there is nothing in it with which to take an exception.

I, too, wish we could get back on the subject of scanners and scanning.

Perhaps we can shortly. Mr. Ron Katz, Mr. John Mackey, and an imposter/forger are the chief obstacles at the moment. But there are others, and there are some very nasty little games being played under the table, which have the effect of prolonging matters and preventing everyone from seeing exactly what is happening.

You expressed my sentiments almost exactly, the only difference being that you see from your eyes and walk in your own moccasins. My eyes and my moccasins would add some new data to that picture.

Kind regards,

Bill Cheek

>Thanks

When I had an AOR8000, I used the Opto CX12AR (now replaced by the Optolynx, I think it's called). It worked as advertised! I did not do much comparison with the other interfaces--they're priced about the same. The Opto was more durable as far as I could see; it also had the added benefit of being able to control up to four scanners at once, which seemed like a good idea at the time. I listed the features of each in a computer-aided-scanning FAQ which now resides at www.ultranet.com/~bellvill (Ron Belleville's page). One of these days, I put the final polish on it and post it here...

It certainly seems he is a newbie, especially as it should be a 'kill file' instead of a 'kill list'. The way he plastered his "I'm going to press Alt-K" messages suggests as such, also. It seems that he's gone through every message, and if it has the word "Cheek" in it, he'd kill file the writer. I personally don't have a kill file, but if I did, I would take great pleasure in just sticking his name in it. Now all he'll get are the "Mods for xxx???" and "What are the freqs for cells?" calls :-)

>Hi Joe!
>What kind of scanner must you have to monitor a "Trunked System" such
>as the one you reference that is in use in Charlotte?
>
>Mickey

Mickey - the system in charlotte uses frequencies in the 800Mhz band - so you need a scanner capable of picking up frequencies in that band.

Trunking can be used with any frequency (the technology may be applied, that is) - but these radios are typically in the 800-900Mhz band.

The big thing about trunked radios, is that when YOU listen to them on a simple scanner, you will hear the conversation jump around - in that, you may hear a question on one frequency, and the reply on the other.....unless you have a really fancy scanner, and can decode the subaudible tones....

easiest way - just set the trunked system's frequencies in a separate bank, then make sure that the "delay" is OFF - that way, as soon as someone unkeys, it resumes scanning immediately, and you have a better chance of catching the response....

good luck, and if you have any more questions, just post em, or mail them!

Try these:
151.625
154.600
151.955

They are listed as Lancaster speedway freqs. but I know I used at
least one of them at rasnsomville a couple of years ago. Also have:
151.955
151.625
Listed as DIRT officials.

As for the world of outlaws I believe that they are not allowed to
have radios in their cars. I could be wrong on that point though. Hope
that helps.

What are you going to at Ransomville? I know that the 358 Modifideds
use radios in their cars and their spotters are really talkative and
fun to listen to. Have fun!

Ben

Re: Mail BOMB Bill Cheek give him some of his own crap back

>Do you feel Bills messages in this news group don't belong?

You guys remember the above? (Katz' public call for a mail-bomb?)
Look at the title/subject line, if you don't remember.

Anyway, our fine feathered Katz -=did=- commence an e-mail bomb
campaign on me....four times. Each time, I returned his bomb
to HIM and to his ISP. Finally, his ISP told Katz to STOP. Cool?

Hardly. Get a load outa this: Katz then complained to MY ISP about
me e-mail bombing HIM. Geezus H. Kriste! Not only did he complain,
but he.......failed to tell the truth and added a lie of his own.

My question is how can it be "criminal harrassment" to *return*
someone's e-mail bombs? <giggle>

But, here......read it for yourselves.

-= Bill Cheek =-

==========
Name: Ron Katz
EMail: ronkatz@interlog.com
Subject: Complaint Message:

I have been getting threats and unwanted mail from
a BILL CHEEK. He is one of your users using an
e-mail address of "bcheek@cts.com"

I must make you aware that he is involved in what I
would consider to be Criminal Harrasment and is using
your system to do it.

The fact that I am in a different country makes it
difficult to take legal action. If this continues
I will find a way.

Could you please advise him that there has been a
complaint and that it is a concern. I would hope
that a simple reply to him would be enough to
put a quick end to my complaint, as I prefer not
to persue this any further.

Thank You.

In article <t$k8$FAOSxEwD9@cf45.demon.co.uk> (posted to rec.radio.scanner on Mon, 29 Jul 1996 22:40:30 +0100), Anthony Davies <adavies@cf45.demon.co.uk> writes:

= 1. Are they any good?

I have an MVT-7100. I'm very happy with it.

= 2. How do they compare to that of other scanners like Realistic etc?

I've never owned another consumer-type scanner. I have a couple of older 2m amateur radio transceivers which scan, but I'm not sure that comparing them to the Yupi makes any sense. The Yupi is prone to intermod, while my 2m rigs are not, but the 2m rigs do not have general coverage receivers.

= 4. Can you connect a computer interface to it?

As far as I know, the MVT-7100 does not have a computer interface port. I'm sure it was not advertised as having one, and there's not mention of one in the users manual.

= 5. What is the Frequency range?

I believe the MVT-7100 frequency range is specified as 150 kHz to 1650 MHz, but you can apparently enter and tune to frequencies as low as 50 kHz.

= 6. Does the scanner suffer vhf data interference

If by "vhf data interference" you mean intermodulation distortion ("intermod") from paging and other data services operating at VHF, the answer is yes (it also has a few birdies). I have also noticed quite a bit of intermod from local AM broadcast transmitters (MW) when listening to shortwave frequencies. It is a significant problem when using the "search" and "scan" functions because the scanner will stop on frequencies where there really isn't a signal. When you're trying to receive a signal on a known frequency (i.e., you're not "scanning" or "searching"), intermod is less of a problem. In my experience, if the MVT-7100 is tuned to a particular frequency which is subject to intermod, a strong signal actually on that frequency will overcome the intermod signal.

The MVT-7100 provides a couple of tools which mitigate the intermod problem somewhat:

(1) there is facility to mark a large number of frequencies (I recall 1000, but I may be wrong) which will be passed over when in search mode. So, for example, if you notice that a local paging transmitter which creates a false signal on a particular frequency, you can easily mark that frequency and it will be passed over when in search mode; and

(2) there is an attenuator which almost always eliminates the intermod (but of course, the signal you are trying to receive must be reasonably strong).

I should point out that I typically use my MVT-7100 in the Chicago, Illinois USA metropolitan area, which I believe has an unusually high density of RF transmitters of various sorts, compared to most other places. If you live in an area that is less saturated with RF, you may notice less of an intermod problem. In addition, I would be surprised if the other handheld DC-daylight receivers currently available at finite prices will provide significantly better resistance to intermod, but I'd be delighted to be proven wrong.

= 7. I have heared that they suffer from memory loss, is this so?

I have not experienced this problem.

>both of your scanner mods books, and I smiled for a week after reading them and
>trying out some of the stuff in them.

What a breath of fresh air! Thanks for the kind words and for refreshing my memories of the rosin vapors.....but especially for the memories of how I got started in scanner hacking. Quite by accident, too. It was back in about '80 or '81 when the PRO-2002 was hot stuff except that it missed the UHF government band of 410-420 MHz. Everyone thought that was pretty gnarly.

Me, I thought it was worth a look after noticing that the band was available in foreign units. Lo! In no time, I found where a diode addition or maybe a clip, yielded 380-420 MHz! And another one allowed the florescent display to show 800 MHz freqs, even though the RF circuits didn't exist. I was hooked. Later came an S-Meter and a few other things. I hacked away well into September, 1986, when the PRO-2004 was introduced. The RS catalog advertised "continuous coverage of 760-1300 MHz" but mine had cellular blocked. I knew it had to be a retrofit and the rest is legend.

> Don`t let the idiots of the world bring
>you down, Bill. They are all jealous of some one who knows something more than
>them, or who insists on just a nominal fee for their hard work. They all want
>something for nothing.

I know. And somehow, they feel they are ENTITLED to the fruits of someone else's labor. Not just mine....but all who dare enjoy the hobby as well as work in it. It's an age-old story...nothing new here.

>This last file,
>where you gave the pro-43 s-meter information to them for free, is a good
>example of your generosity, Bill. If you were as crass and commercial as they
>say, then how come that happened ha ha.

<Giggle> Seriously, I'd just as soon GIVE information away, and when I can, I will. What the heck? Information is a lot like giving directions to the gas station. But when I have to PAY to get information, I sure as heck ain't going to give it away. The people who howl the loudest sure don't work for free or give anything out of

their pockets. Besides, me and the Salvation Army have a contract.
They don't write about radios and I don't do charity.

> I think that file kind of shut their
>mouths for them. I don`t see many of the flamers actually contributing much of
>anything on the group. Typical.

They don't. Our John Mackey, aka [BCheek4540@aol.com] is a class act
for that kind of crap. I kicked his ass every which way from Sunday
for asinine behavior on FidoNet.....so he's chapped and smarting. If
it weren't for that, he'd be no where, unheard of, doing nothing. So
to get attention, he shits his pants.......a very common syndrome.

> Keep on taking joy in your work, and take heart, some of us enjoy it
>immensely. I will be looking forward to getting another good bargain on your
>next book........73

Oh gawd.........shhhhhhh. I'm still vacationing from the last three.
Writing books comes easy for some people. Louis L'Amour was one.
Stephen King another. For me....it's work. But then technical
writing always is work. L'Amour and King spin yarns from their heads.
I'm jealous of THEM! My "yarns" come from weeks of chaos, disarray,
drudgery, trial and error around shop and shack.

But it's all worth it when someone like you feels it's a bargain and
has a brighter day.

Thanks for saying so!

>
>
I'd go with the AOR1000, without a doubt. $250 is a good price (I'm assuming that it's used but in good condition at that price since new they sold for close to $400). It's got 1000 channels (10 scan banks and 10 search banks) and goes from 50 Khz to 1300 Mhz without any gaps. It's a good performer too (well not on the shortwave side but who buys a scanner for SW?) The only complaint about it is that it is difficult to program and the documentation is quite poor.

If you really have your heart set on a Pro26, go for the Uniden BC3000XLT instead. Similar in many respects, better in others (400 channels, and exceptionally well built, come to mind). Best of all, it sells for about $50 less than the Pro26. There was a review in Monitoring Times comparing the two a while back. I'm sorry, I don't recall the issue.

I recently read an article concerning the use of electronics onboard commercial airlines. I believe it was the latest QST magazine. It was written by a captain of one of the major air carriers. Basically he said it was ok to use most stuff once they reached cruising altitude. I talk with a commercial pilot several times a week here on 2 meters abt this too. He said he has never had a case where he saw a disturbance caused by any electronics device.

I just took a trip to Spokane Wa. last week. I flew Alaska airlines. I used my PRO-43 most of the way up without hassle. On the way back however, The male flight steward told me I could not use it or gps or cellular phones. From what I understand, this is more company policy than anything else.

I guess I can respect their right to not allow certain electronic toy on their aircraft.

.Don.

I have been there several times, but I don't remember what frequencies they use. They do have a sign asking that all ham radios and scanners be turned off while in the museum so I have abided by that request and left them in the car.

Enjoy your visit to the fine museum and be sure to look for the `Tacit Blue' aircraft that should now be on display. The unvailed it while I was at the museum the week after the Dayton Hamvention in May. If you have never been to the museum, plan on spending the WHOL day there as it is that big. There is also an annex on the base that has some interesting aircraft there as well.

The Air Force Museum also has a web site. I do not remember the URL, but any of the search engines should find iw with a search on `Air Museum'.

Enjoy.

Does anyone know the real facts about using a scanner while on an airplane and inflight? On one flight while using my scanner, I was told by the flight attendant to turn it off as it would interfere with pilot communications. Later in the same flight, he came back to me after talking with the captain and said that it was ok to use the scanner since it only receives signals and does not transmit itself. On a subsequent flight, they just flat told me to put it away and not use it at all as it is illegal to use while inflight. What's the real skinny for a fact???? Post or email me. Thanks

I forgot to comment on this drivel. I really doubt that Bill would
consider me, or his other satisfied customers as dumb-ass hobbyists.

He may, at times, get a chuckle out of the fact that he has had the
good fortune of being one of the only ones in the scanner hobby to
have made a living off of what he enjoys doing. And that he is able to
share his knowledge with people who are happy to pay for information
that is presented in a easy to follow manner.

Try it, you will find it is not as wasy as you might think it is.
(certinly not as easy whrn there are those such as you out there)

>You know what Bill Cheeks considers you? A dumb-ass hobbyist! This is how
>he refers to the people that buy his gadget. But after all, your moneys in
>his pocket, isnt it?

Why the hell can't you stupid frigging twits spell the mans name
without the `s' You must be some kind of a moron to not be able to
read the top fo the message and see thet it quite clearly reads CHEEK!
and not Cheeks. Are you all so god dammed bored that you can't get
off your asses and do something for the hobby and not against it.

Geeeze, no wonder the media loves to portray scanner listeners as
wierd people!!! Some of them really are!!! If I were so inclined I
must say I would put the whole lot of you in a room and weld the door
shut, but you all would just slither under the door.

Why not put half the effort you put into trying to tear Bill down into
trying to one up him by doing something better for the hobby. I'll
tell you why you won't, you won't beacuse you are nothing but a whiner
that lacks any grey matter to figure out the modifications that Bill
has designed, refined, and most importantly doccumented.

I really do think that Bill has freely admitted that every mod in his
list is not just his own work. They ARE, however, his passion in life
and there has not been and doubtful will be anyone else with his
talent for doccumenting how to preform the mods.

I have been involved in the scanning world since about 1972 and the
the modem world since about 1982. In all this time I have NEVER run
across ANYONE who has contributed as much to the hobby as Bill has.
Not Monitoring Times, Popular Communications, US Scanner News,
National Scanning, not even the hallowed RCMA has contributed the
volume of raw technical information relating to the modification
of scanners as Bill has.

To the best of my knowledge, each mod that Bill has presented in his
books have also been presented free of charge via on-line methods.
Maybe they have not been as well doccumented in the on-line venues as
the in his books, but none the less they HAVE been available free of
charge. Yes, I do know that some will counter that they were put on

the networks by someone else, and some no doubt were.

As to the argument that not all of the stuff that Bill publishes is is own original work. This may well be, and no doubt is true to a point. If you call the owners of Optoelectronics, Grove, AOR, GRE, Microsoft, Ford, RCA, Motorola or any other company out there that has any idea of what the real world is like, they will all tell you that they didn't do it alone. Hell even the one man operation has to use other sources for some of thier work. They use the Post Office, UPS, On-Line Services and what have you to ASSIST them in the performance of thier work.

Ask Bill Gates, The CEO of Microsoft (in case you didn't know), who wrote Windows95. I'll bet he would not even think of replying that he did. He would, no doubt, tell you that Microsoft did.

BUT the fact still remains that the definitive reference for modifications to the Realistic line of scanners is without a doubt, hands down, The Scanner Modification Handbook, The Scanner Modification Handbook Vol2, and The Ultimate Scanner. All three books

were written, researched. and developed for publication by none other than Bill Cheek!

Care to enlighten us with your portfolio of constructive contributions that you have given to the hobby?

> Bill is not afraid to speak his mind and is
>> not one to back down from anyone, period!!!

>Well, I'm not at all sure about that..

By the way, what is `PJB', is it short for a name, or is it short for something like `Prefers Jacking Bill'. The later sounds more like it.

It is way beyond the time for you and others to just put up or shut up. Contribute something, anything, helpful to the general scanner community, or shut up and just read and enjoy the efforts of the few who really do contribute useful information to the hobby.

Roy Schahrer - N7QYK

I bought 1 about 2 yrs ago, been very satisfied with it. The cig lighter adap failed, ACE sent 1 out, got it in a week. Some keys on keypad wouldn't respond, intermittantly, sent it back to ACE 3 days out of warr, they covered anyway, had it back fixed in 2weeks. No probs since then. It receives anything you can think of, SW surprised me, reception VG with RS telescopic whip. SSB also VG. 800Mhz excellent. No complaints at all, except I don't have enough time to spend on it!

Neil,
As another recipient of his misguided use of a news reader function and after seeing how indiscriminately he has applied it I figure that he's a relative newbie here on `The Net'. *I* got mine because I had the `gaul?' to tell the initial flamers of Bill Cheek to "Shut the fuck up!" on the very first post they made since I could see what eventually happened *would* happen. (They have done this before and just haven't seemed to have learned a danged thing. [Or... Maybe... They *like* the notoriety and `exposure'?]) Oh, well... If he persists in accumulating names and topics indiscriminately... You're right. he'll soon be seeing pretty much nothing in *these* newgroups!

Oh, well... Back to the freeway which is already in progress.

Doloeo ergo sum,
-HALFPINT-

4619. Ignition Noise on scanner

Newsgroup: rec.radio.scanner
Date: 1996-07-31 00:00:00 UTC
From: "N. Adam Dolde" <sleepy@flinet.com>
Message-ID: <31FFA815.1ED2@flinet.com>
Source record: 228072

I need tune-up suggestions!

When using my PRO-51 in the car I get alot if ignition noise. It's not the whining noise, it's more like crackling. It's not strong enough to break the squelch, but when a distant, weak signals is picked up, they are drowned in the noise.

It's tune up time again, but last time I did a tune up, I used resistor spark plugs and pretty good quality wires. Any suggestions as to a brand or type of ignition parts that should be used on a '92 Ford Ranger 3.0 liter V6?

Thanks
Adam Dolde

#1: Take this crap to alt.flame.

Bill Funk <skypilot@starlink.com> wrote:
>
>It might be pointed out that each of Bob Parnass' posts with info has an ad
>in the sig line, and I've not seen one complaint about this.
>It seems that only certain people are taken to task here.

#2: It is generally allowed under Usenet Netiquette guidelines, that one
can have anything in their sig that they desire, as long as that sig
does not exceed the netiquette-agreed upon four lines, and as long
as someone doesn't go around to newsgroups posting utter bullshit
just to get his/her sig into the stream.

If you don't want to see sigs, then configure your newsreader to chop
the viewed articles at the tear mark "<CR>-- ". If you are not using
a proper tearmark prior to your sig, then you might want fix your posting
software so it is compliant with this rule of netiquette.

"<CR>--<CR>" will not do,
"<CR>-- <CR>" will not do,
"-- <CR>" will not do,

EXACLY THREE CHRACTERS on a new line, two dashes followed by a space and
then the carriage return.

--
And if you had your software set to omit reading sigs, you wouldn't be
reading this right here.

The flame war sucks, but I am against a moderated scanner newsgroup.
While a moderated newsgroup might get rid of this flame crap between
Cheek and his detractors, it is my feeling that it could do more harm
than good in the long run.

My best advice, is to personaly reply by email to each and every
individual in the flame war, and ask them to take it elsewhere. They
might claim that it is their right to post it wherever they want, and
that may be fine and true, but it is also your right to let them know
that you find offense in their choice of locations to post it. In my
mind, there is little left to defend along the lines of the Freedom
you feel you may have to scan the airwaves, when you start eroding
the Freedom to speak.

It is of my opinion, that if you support moderating the group, you would
be close to hypocrisy if you don't also support the filtering of any
post suggesting/mentioning the monitoring of cordless or cellular
phones, broadcast RPU's, pagers, or other somewhat illegal to monitor
service.

What type of scanner is it? You probably won't pick it up on this
frequency on a scanner of a different make. It sounds like a birdie,
which is the scanner receiving it's own oscilator signal.

Try this URL: http://www.nt.net/allout/gps.htm

It is a GPS buyers guide and fact sheet. Prices range from $299 - $499 (Canadian), or approximately $219 - $365 US.

Cheers,
Mike

I presently have a BC100XLT, considering purchasing the SC150 to replace it.

Please offer advise if you have it!!!!!

I'm considering the switch for the following reasons:
900mhz range (my local pd uses 900mhz and I can't pick them up with my current scanner)

TurboSCAN 100/second. My current scanner goes at a rate of about 16/second. Big difference.

These are the two primary differences I see.

Can anyone offer pros/cons??!!

THANKS A LOT!!!!!

I haven't noticed any birdies that I can think of. I did "reprogram" the IF on the radio and now I seem to get a lot of intermod on 50Mhz from the 13Mhz shortwave stuff. I've had it tied to all flavors of antennas and in general I'm happy with it. Then again I got it for < $300 :)

I can only gripe about a few things and most of them are trivial. The backlight could be a little stronger, and maybe put the phone jack on the side or something. The top of the unit is fairly crowded and difficult to operate with everything plugged in.

If your looking for something to listen to "all" the PS/fire/police/med stuff I'd reccomend it. If you want to do much with it under 150Mhz there is better out there. But for the money there is isn't much else that covers 100Khz to 2060Mhz with no gaps.

I wouldn't worry about it too much. As long as you're not doing anything to attract attention to yourself (like broadcasting the scanner through a PA speaker or making a nuisance of yourself at accident scenes), the police have better things to do than hassle you about your scanning activities.

I grew up in Minnesota, a state with one of the most restrictive mobile scanner ordinances known to man. Always had one or more scanners in my vehicle, and never had any problems. And this was before I had a ham ticket (which would have exempted me from the law)

I ran into the same situation of needing more sound from a PRO-43 while mobile. I was able to use the CD jack on my car stereo to pass the scanner's audio into the amp.

If you want a separate system so you can use the car's FM radio and the scanner at the same time, here is what I did.

Radio Shack has a amplified speaker #21-541. It can be mounted under the dash or any place you choose and will give ample volume to the hand held scanner.

I removed one of the dash mounted speakers in my car and replaced it with the RS amplified speaker. Everything happened to fit perfectly in my car. I then pushed out one of the many plastic "panels" that today's cars have on the dash.

Look for a small one, 1x2 inches should do. I drilled a hole to mount a audio jack. RS sells them, pg 80 of their current cat. has them listed. Then I ran the cable from the jack to the new speaker. I also put an on/off switch in the plastic panel so I could turn off the amp when not in use.

Everything works fine and I can still use my car's radio if I wish while the scanner is running since it has a separate audio amp.

It's a little bit of work but if you have the knowledge to do it, it won't take long. Most of the factory dash mounted speakers leave much to be desired. If you don't need 4 speakers to enjoy the car stereo, this is a great spot to mount a scanner speaker.

Just post if you have any questions, hope this helps you.

LGS

>scanner that can be used in conjunction with a programmable
>handheld?

Suggest you consider the BCT-7 instead.

Although it's fun to listen to the chatter while driving about,
the BCT-10 lacks a frequency display so you usually can't
identify the source of the radio traffic. It lacks programmability,
too.

I tested a BCT-10 and measured the sensitivity, audio,
and other parameters. See my review in July 1996 Monitoring
Times magazine.

Tiger X-term (t4) wrote:
: I recently read an article concerning the use of electronics onboard commercial
: airlines. I believe it was the latest QST magazine. It was written by a captain
: of one of the major air carriers. Basically he said it was ok to use most stuff
: once they reached cruising altitude. I talk with a commercial pilot several
: times a week here on 2 meters abt this too. He said he has never had a case
: where he saw a disturbance caused by any electronics device.

The individual airlines make the rules. Delta allows them but most other
airlines don't. The feds mandate that everything electronic be off while
the plane is at low altitude (i.e. seat belt sign on), but once you're up
high enough it's up to the airline.

Every Christmas Eve the local dispatchers put out a Bolo on a big man in a
red suit driving a sleigh pulled by reindeer.

Its sort of a tradition now.

Some of the officers even claim that they have spotted him :-)

>Seems like your being bombed eh? Inconvenience?..Gee I would hope
>you would notice a hidden meaning in all this...

Like what? When I find a turd like you floating in the punch bowl,
there is no hidden meaning to discern. The newsgroup is the punch
bowl.......... there's the meaning, if you will, and you're the
floater. <gag>

>>It's easy, if you know what you're doing. I've implemented methods
>>that render your silly games more impotent

>I still see no need to post this here...why do you insist in
>adding to the garbage Billy?

Who the hell are you to "see" and judge? My Give-A-Shit meter reads
zero where you are concerned. But the intent is to let you know that
you will lose if you persist with the mail bombs. I am immune to
them, for one, but.......they're illegal, too.

>>What's more, you still leave yourselves open to official or even legal
>>sanctions, if you persist with this increasingly sinister game.

>Somehow Billy, I don't think anyone is very worried about your threats
>anymore....

No threats, Katzenjammer. Your ISP has warned you already. You might
ought to consult with a lawyer for advice on liability for your
actions if you persist.

>>I'm immune to your silly e-mail bombs. Your forgeries of my name and
>>ID on the PERVERT/SEX groups haven't been discussed yet, but will
>>backfire on you in an.......ummmmmm......perverse sort of way. <grin>

>I take it you've been haveing some problems?

Noooooo. I just implemented some software tricks to take care of the e-mail bombs automatically. It's easy to do. Just a mild inconvenience until it was done.

> Are you sure it's e-mail bombs? Or do you mean complaints?

What's this shit about complaints? Complain to high heaven, dude. Geez, get a life and quit sweating the small stuff. Or complain to someone who will hand you a hanky for your dripping schnoz and incontinent bladder, never mind your cavernous poop chute for which there is no hope whatsoever.

>>Or shall we perhaps retire to the boring
>>study of scanners and scanning?

>Oh I see now....I get it. This subject of scanning and scanners
>which is what is newsgroup is all about has become "BORING" to you.

No. To you..... you've wasted a lot of time and money dwelling on me instead of scanners and scanning.

>Is this then why you resort to these games you play?

If it weren't for the few floating turds like you, we could get serious about scanners and scanning.

> If so I would
>then say why are you here? (....sell a book maybe!?)

To you? To people like you? Not on your life, Katzenjammer Kid. Your money ain't worth the paper it's printed on. Give it to your favorite charity.

Radio is my hobby, too, and if people don't want to talk radio for a while, far be it for me to disrupt the flow. I came on this forum talking radio, but you and people like you wouldn't hear of it. Ok....suit yourself. You sure as heck have nothing to contribute to the forum.

Just your runny nose and cavernous pooper.....oh, and that gap between your buck teeth makes you whistle when you talk. You should see a dentist, and have 'im give you a haircut while you're at it.

Pardon my ignorance, but what exactly is an ISP? Is that the system administrator? If so, than since you, Bill, are the President and CEO of CTS.COM, wouldn't that make you the ISP, Boss, chief user, etc??? So, if they are complaining to your system administrator, then they are complaining to you about you?!? I gotta laugh at that one.....

>Have a great day

As long as the ERP of the signal radiating from the antenna does not
exceed those limits set forth in part 15 (something like 100uV at 3
meters, I think), an external antenna/remote antenna should be fine.
Since there are no restrictions on the height above ground the
base-unit of the phone can be, there would be little difference in
haveing the antenna at the same height. But he will have feedline
loss, connector loss and the like, to deal with. May end up not being
worth it at 900Mhz..
Heck, if he could come up with a separate charger for the handset,
mounting the base up on a flagpole WOULD be a good idea. It'll just
look funny.

Well, ol' Katzenjammer is learning the evils of his ways with ineffectual e-mail bombs, but seems his "call to arms" caused another sicko to rise to the surface.

Robert E. Edmunds [az342@freenet.carleton.ca] seems to want to play silly games now, is that right Bob? You may wish to curtail that silliness righteously quick, "tuit suite", if you catch my drift there. If you don't stop, you will only waste your money and be forced into a more unpleasant situation, after which you WILL stop anyway. Best to just stop voluntarily and save face.

I don't know you from Adam, so whatever your problem is, it ain't me. But I will get to be a problem if you persist.

Most humbly at your service,

-= Bill Cheek =-

If they did have some sort of radio beacon, I doubt it would help them much
in finding it under 120 ft. of salt water.

Hello there. I live in Northern Va. but can help a little. Note:Va beach
public safety(Police) is trunked and uses terminals in their cars. I'll
give the Trunked freq at the end. Try:

462.5750 (PL 100.0) TENS (sorta a local net)
154.3700 Fire
155.1750 Rescue
462.9750 Norfolk Paramedics
462.9500 Sentara Norfolk Gen. Hosp. Helo.
154.3850 Suffolk Fire
155.1900 Suffolk Police
140.2250 NAS Oceana Security
140.1500 """""""""""""""""""
453.8000 TECAP Multi Juristctional use (chases, etc.)
856-860.4625 Public safety(Trunked)
856-860.4875 """""""""""""""""""""""
856-860.7125 """""""""""""""""""""""
856-860.7325 """""""""""""""""""""""
460.5750 VA Beach fire
460.6000 """""""""""""
460.6250 """""""""""""
465.5750 """""""""""""
465.6000 """""""""""""
465.6250 """""""""""""

And that is about it. If you still need more then contact me via e-mail
and I will see what I can do.

Kevin

Hello there. I know you can apply the virtual downconversion to it. If don't know what that is mail me and I will mail you the directions. Also there is a backlight mod to make the light stay on as long as you want it to. I will be recieving it in couple of days...I'll get back to you on that one.

Kevin

4656. NEED ADVICES PLEASE... on buying a new scanner

Newsgroup: rec.radio.scanner

I'm pretty new to scanner hobby and i want to know what scanner should be the best for me...

I actualy have a handheld realistic scanner (PRO-24) 28MHz..956MHz with some gaps here and there and w/o cellular... and i want to buy a used scanner for about 250-300 (U.S.)

I want one (portable) that cover at least from 27MHz (for CB) to the highest possible freq. If possible 1.3GHz and + and that can be cells unlockable. If it can catch HF too, it will be great... ;-)

I was thinking of the Uniden Bearcat BC-3000xlt or something like that...

I want to have one that i wont throw away next year :-) soo it should have some interesting functions and good raw power.

So, if you know what kind of scanner i'm looking for or know where to look for it then just reply me and please, if you can, a preffer that you send your answer to me thru e-mail... And on news too so that other peaple can share the answer ;-)

73 to all readers in frequency!

Eric

Have you tried them both? I think that would answer your question.
I have an AR-1000 and like its many features, but it is VERY
user-unfriendly and performance is sub-par. I think there is a good
reason the pro-26 is that much more expensive. I haven't even tried
the pro-26, but would recommend it, if it does actually cover the same
freqs. Just my 2 cents worth... Good luck.

I'd noticed that long ago, but didn't want to cause the gentleman any undue difficulty. Also noticed that WinRadio jumped on with an announcement that got no dissent. Some time ago, our dearly beloved Michael Alexander posted a notice of HIS forthcoming book, and no one sniveled about it. There's an easy dozen out and out ads or commercial posts that could be dug up. But why? I think they're cool and in good taste.

>It seems that only certain people are taken to task here.

So it seems.......but only by a few and the sadly disillusioned few who follow them.

I think I am going to settle in for a good read of "Much ado about nothing" tonight........and maybe send Ronnie Katzenjammer's e-mail bombs back to his ISP (again).

<giggle>

Sure does not look this way at this end.

>Look - boys, girls, or whatever you are.....you've caused me only the
>slightest temporary inconvenience that has now been amply compensated.

Seems like your being bombed eh? Inconvenience?..Gee I would hope
you would notice a hidden meaning in all this...Billy

>It's easy, if you know what you're doing. I've implemented methods
>that render your silly games more impotent than Peetie Joe Boe when he
>quaffs double hits of Serzone and Depo-Provera on the rocks.
>(Remember that one, Peetie? <smile>)

I still see no need to post this here...why do you insist in
adding to the garbage Billy?

>
>What's more, you still leave yourselves open to official or even legal
>sanctions, if you persist with this increasingly sinister game.

Somehow Billy, I don't think anyone is very worried about your threats
anymore....

>
>I'm immune to your silly e-mail bombs. Your forgeries of my name and
>ID on the PERVERT/SEX groups haven't been discussed yet, but will
>backfire on you in an.......ummmmmm......perverse sort of way. <grin>

I take it you've been haveing some problems?
What is it this week?
Are you sure it's e-mail bombs? Or do you mean complaints?

>
>Have we only begun to play?

Does not seem like a game to me. But if you insist I'm sure others
will play with you Billy

>Or shall we perhaps retire to the boring
>study of scanners and scanning?
>

Oh I see now....I get it. This subject of scanning and scanners
which is what is newsgroup is all about has become "BORING" to you.

Is this then why you resort to these games you play? If so I would
then say why are you here? (....sell a book maybe!?)

>Next, please?

The old Electra/Bearcat BC220 base/mobile is a much different
radio than the current Uniden/Bearcat BC220XLT portable. The
info from my old article applies to the old BC220.

Too bad both Uniden and Radio Shack are recycling scanner model
nomenclature. It's confusing.
